COMMUNITY, FAMILY & INDIVIDUAL WELL-BEING

Individual Well-being

Potential Years of Life Lost (PYLL)

	1991/93	1996/98	1997/99	1998/00	1999/01	2000/02	2001/03	2002/04
Northwest Territories	72	67	69	72	70	65	70	68
Yellowknife	48	41	46	48	41	42	45	54
Remaining NWT Communities	89	87	89	96	97	87	92	80
Small Local Communities	91	82	73	59	52	44	57	54

Source: Statistics Canada Vital Statistics.

Notes: Three year average PYLL rate per 1,000 persons = three year average PYLL / (three year average population / 1,000 persons).

- The three year average population for 1991/93 = (1991 population + estimated 1992 population + estimated 1993 population) / 3.
- Estimated population for 1992 = 1991 population + [(1996 population - 1991 population) / 5].
- Estimated population for 1993 follows same methodology as estimated population for 1992.

TABLE 2.1: POTENTIAL YEARS OF LIFE LOST (<75 YEARS), 1991-2004				
	Northwest Territories	Yellowknife	Remaining NWT Communities	Small Local Communities
1991	2,907	838	1,766	303
1992	2,760	983	1,533	244

* The sum of the community types may not add to the NWT total because of deaths in the NWT that could not be attributed to a community.

Injuries

TABLE 3: DOCTOR-DIAGNOSED INJURIES AND POISONINGS, AGE STANDARDIZED RATE PER 1,000 PERSONS, 1994/1995 – 2006/2007													
	1994/95	1995/96	1996/97	1997/98	1998/99	1999/00	2000/01	2001/02	2002/03	2003/04	2004/05	2005/06	2006/07
Northwest Territories	271	270	261	250	246	230	227	209	203	194	200	206	193
Yellowknife	322	316	311	290	292	271	268	237	227	212	212	218	215
Remaining NWT Communities	248	249	232	230	221	205	205	195	190	192	198	205	183
Small Local Communities	178	185	180	163	163	157	151	144	149	112	150	150	141

Sources: Department of Health and Social Services, *Medicare* and NWT Bureau of Statistics.

Notes: These numbers are estimates subject to future revisions due to record revisions, data entry delays and database design changes. N'dilo and Detah numbers are included in Yellowknife, as separate postal codes do not exist for each community. Numbers included physician diagnosed injuries and poisonings regardless of location (clinic, hospital or other location). Some individuals may be diagnosed more than once for the same injury or poisoning. 1994/95 and 1995/96 rates are calculated using estimated population for 1994 and 1995.

- Estimated 1992 population = 1991 population + average annual population growth.
- Average annual population growth = [(1996 population – 1991 population) / 5].
- Estimated 1994 and 1995 population follows same methodology as estimated 1992 population.

	Northwest Territories	Yellowknife	Remaining NWT Communities	Small Local Communities	Gamètì	Łutselk'e	Behchokò	Wekweètì	Whatì

Sources: Department of Health and Social Services, *Health Suite* and NWT Bureau of Statistics.

Notes: ".." means data is not available.

These numbers are estimates subject to future revisions due to record revisions, data entry delays and database design changes.

Yellowknife residents (including N'dilo and Detah) are not reported as they are generally diagnosed at Stanton's emergency department (by physicians).

A new community health information system was implemented as of April 1, 2000. Previous data are not comparable due to changes in data collection.

Numbers primarily include nurse diagnosed injuries and poisonings at Health Centres.

In some cases an individual may have been treated more than once for the same injury or poisoning.

Notes: ".." means data is not available.

Three year average teen birth rate per 1,000 females between 15 and 19 years of age = three year average births to females 19 years of age or younger / (three year average population of females between 15 and 19 years of age / 1,000).

- The three year average population of females between 15 and 19 years of age for 1992/94 = (estimated 1992 population of females between 15 and 19 years of age + estimated 1993 population of females between 15 and 19 years of age + estimated 1994 population of females between 15 and 19 years of age) / 3.
- Estimated population of females between 15 and 19 years of age for 1992 = 1991 population of females between 15 and 19 years of age + [(calculated 1996/98 population of females between 15 and 19 years of age – 1991 population of females between 15 and 19 years of age) / 5].
- 1996/98 population of females between 15 and 19 years of age calculated by reversing the equation used to find three year average teen birth rates per 1,000 females between 15 and 19 years of age
- 1996/98 population of females between 15 and 19 years of age = (3 year average births to females 19 year of age or younger * 1,000) / 3 year average birth rate per 1,000 females between the ages of 15 and 19 years of age.
- Estimated population of females between 15 and 19 years of age for 1993 and 1994 follows the same methodology as estimated population of females between 15 and 19 years of age for 1992.

Notes: "-" means data, where cell values are less than five, have been suppressed.

".." means data unavailable.

These numbers are subject to future revisions due to record revisions, data entry delays and database design changes.

Data unavailable for the Northwest Territories total or the Remaining NWT Communities in 1999/00.

N'dilo and Detah numbers are included in Yellowknife, as residency for children in these communities is often recorded as Yellowknife by the child welfare worker.

Numbers may have increased since the late 1990s due to the impact of the new Children and Family Services Act (in force October 1998). The new Act created a plan of care agreement as a new way to provide services to children.

Under the plan of care agreement, children could still be living in their parents' home but are receiving services from the Department of Health and Social Services. An equivalent category to 'a plan of care agreement' did not exist under the previous Act.

Since the new Act came into force, parents have been more inclined to seek services for their children, or family, now that they do not have to automatically give up parental rights.

The vast majority of the increase in children receiving services has been from children who are living at home. And, of these children receiving services in their homes, most service arrangements originated through voluntary agreements as opposed to court orders.

Notes: ".." means data is not available.

Income on "All Returns" shows income from all residents filing a tax return, regardless of level of income.

Changes to the system of tax credits introduced in the early 1990s impacted the number of tax filers and therefore average income.
