PROJECT AGREEMENT

THIS AGREEMENT dated as of September 22, 2015 is entered into:

BETWEEN:

The Government of the Northwest Territories
(the “**Authority**”)

AND:

Boreal Health Partnership
(“**Project Co**”)

WHEREAS:

A. pursuant to a request for proposals dated October 1, 2014 and the competitive selection process provided for therein, the Authority has selected Project Co to: (i) design, build, finance, operate, maintain and perform life cycle rehabilitation on the Facility; and (ii) complete the Initial Remediation Work at the Existing Facility; and

B. the rights and obligations between the parties will be governed by the terms and conditions set out in this Agreement.

NOW THEREFORE THIS AGREEMENT WITNESSES THAT, in consideration of the mutual covenants herein contained and other good and valuable consideration, the receipt and sufficiency of which are hereby expressly acknowledged by each of the parties hereto, the parties hereto agree as follows:

1. INTERPRETATION

1.1 Definitions

In this Agreement, unless the context otherwise requires, the capitalized terms will have the meanings set out in Schedule 1 [Definitions and Interpretation]. Certain words and expressions are defined within the schedules hereto and such definitions will apply, unless the context otherwise requires, in all other parts of this Agreement whether or not Schedule 1 [Definitions and Interpretation] contains a cross-reference to such definitions.

1.2 Interpretation

This Agreement will be interpreted and construed in accordance with the provisions set out in Schedule 1 [Definitions and Interpretation].

1.3 Schedules

The schedules hereto and the terms set out therein will be deemed fully a part of this Agreement.

2. GENERAL PROJECT TERMS

2.1 Term and Termination

The term of this Agreement (the “**Term**”) will commence on the Effective Date and will continue to the Expiry Date unless earlier terminated:

- (a) by the Authority at any time in its discretion, and at the convenience of the Authority, by notice stating that termination is for convenience pursuant to this Section 2.1(a);
- (b) by the Authority pursuant to Section 6.6 if the Authority elects not to re-instate the Project after receipt of a Reinstatement Plan;
- (c) by either party pursuant to Section 6.7 in connection with insufficient insurance;
- (d) by Project Co pursuant to Section 6.8 in connection with the economic reinstatement test during Construction;
- (e) by either party pursuant to Section 6.9 in connection with uncollectible Insurance Receivables;
- (f) by the Authority pursuant to Section 6.15(a) or 6.15(c)(ii) in connection with a Principal Insured Risk becoming Uninsurable;
- (g) by either party pursuant to Section 8.4(c) or 8.4(e) in connection with a Relief Event;
- (h) by either party pursuant to Section 8.6(c) or 8.6(d) in connection with a Force Majeure Event;
- (i) by the Authority pursuant to Section 12.4 in connection with a Project Co Event of Default; or
- (j) by Project Co pursuant to Section 13.3 in connection with an Authority Event of Default.

Unless otherwise specified, the Termination Date for such earlier terminations will be the date notice of termination is given by one party to the other party in accordance with this Agreement. Except as referred to in this Section 2.1, neither party will have the right to terminate this Agreement.

2.2 Document Deliveries

On or before the Financial Close Target Date:

- (a) Project Co will deliver to the Authority the documents described in Section 2 of Schedule 18 [Completion Documents]; and
- (b) the Authority will deliver to Project Co the documents described in Section 3 of Schedule 18 [Completion Documents].

2.3 Assumption of Risk

Except to the extent expressly allocated to the Authority or otherwise provided for under this Agreement, all risks, costs and expenses in relation to the performance by Project Co of its obligations under this Agreement are allocated to, and accepted by, Project Co as its entire and exclusive responsibility.

2.4 Opportunities

Except as expressly provided in this Agreement, or as may be specifically agreed in writing between the Authority and Project Co during the Term, the Authority reserves the right to all commercial and other opportunities for, or related to, the Project, the Lands and, prior to the Initial Remediation Work Completion Date, the Existing Hospital Lands.

2.5 General Duty of Project Co to Mitigate

In all cases where Project Co is entitled to receive from the Authority any compensation in addition to the payments described in Section 3.1(a), costs, damages or extensions of time, Project Co will use all reasonable efforts to mitigate such amount required to be paid by the Authority to Project Co under this Agreement, or the length of the extension of time. Upon request from the Authority, Project Co will promptly submit a detailed description, supported by all such documentation as the Authority may reasonably require, of the measures and steps taken by Project Co to mitigate and meet its obligations under this Section 2.5.

2.6 General Duty of Authority to Mitigate

In all cases where the Authority is entitled to receive from Project Co any compensation, costs or damages, but not in any other case, the Authority will use all reasonable efforts to mitigate such amount required to be paid by Project Co to the Authority under this Agreement, provided that such obligation will not require the Authority to:

- (a) take any action which is contrary to the public interest, as determined by the Authority in its discretion;
- (b) undertake any mitigation measure that might be available arising out of its status as a public body, but which measure would not normally be available to a private commercial party; or
- (c) alter the amount of any Deductions it is entitled to make in accordance with Schedule 8 [Payments].

The Authority will have no obligation to mitigate, implied or otherwise, except as set out in this Section 2.6 or as otherwise expressly set out in this Agreement. Upon request from Project Co, the Authority will promptly submit a detailed description, supported by all such documentation as Project Co may reasonably require, of the measures and steps taken by the Authority to mitigate and meet its obligations under this Section 2.6.

2.7 Representatives

Project Co and the Authority will each have a Design and Construction Representative, appointed in accordance with and with the rights and responsibilities set out in Schedule 2 [Design and Construction Protocols], and an Operating Period Representative, appointed in accordance with and with the rights and responsibilities set out in Schedule 4 [Services Protocols and Specifications]. Project Co's Design and Construction Representative and Operating Period Representative may be the same person. The Authority may in its discretion appoint the same person to any or all of its Representative positions. From time to time, the Authority may by notice in writing to Project Co change the signing authority of any or all of the Authority Representatives and appoint or remove one or more other persons having signing authority.

2.8 Key Individuals

Attached as Schedule 17 [Key Individuals] is a list of persons (the "**Key Individuals**") that Project Co will utilize in undertaking the Design, the Construction and the Services, as described in that Schedule. With respect to each of the Key Individuals:

- (a) Project Co will use all reasonable efforts to retain the Key Individuals to perform the duties for the period described in Schedule 17 [Key Individuals]; and
- (b) if for any reason a Key Individual resigns or is otherwise unavailable to perform the duties described in Schedule 17 [Key Individuals] then Project Co will use all reasonable efforts to retain a replacement with similar expertise and experience to the unavailable Key Individual, satisfactory to the Authority acting reasonably, and Project Co will not replace such Key Individual without the Authority's consent, acting reasonably.

No later than 3 months prior to the start of the Operating Period, Project Co will notify the Authority of the name and qualifications of the person designated by Project Co to be the "General Manager" or equivalent as of the start of the Operating Period, and such person will from the date of such notice also be a Key Individual for the purposes of Section 2.8(b) above.

2.9 Naming

The Authority will have the exclusive right to name the Facility and any parts thereof.

2.10 Signs

Subject to Section 6.22 of Schedule 2 [Design and Construction Protocols], Project Co will not erect or maintain any signs on the Lands, the Existing Hospital Lands or in or on the Existing Hospital or the Facility without the written consent of the Authority. Project Co acknowledges that the Authority will generally require that signage on the Lands and/or related to the Facility after the Service Commencement Date display only the name and logo of the Authority and that it is unlikely that the Authority will consent to any signage containing the name of Project Co or any Project Contractor or Sub-Contractor after the Service Commencement Date.

3. AUTHORITY'S GENERAL OBLIGATIONS

3.1 Payments

Subject to Project Co meeting the requirements for payment set out in this Agreement, the Authority will pay Project Co amounts expressly provided for herein, including:

- (a) the Service Payments, the Construction Payments and the Periodic Payments as set out in Schedule 8 [Payments];
- (b) the Termination Payments as set out in Schedule 9 [Compensation on Termination];
- (c) amounts owing under Section 6 (Insurance, Damage and Destruction);
- (d) amounts owing under Section 7 (Changes, Minor Works and Innovation Proposals);
- (e) amounts owing under Section 8 (Supervening Events);
- (f) amounts owing under Section 9 (Indemnities and Limits on Liabilities and Remedies);
and
- (g) amounts owing pursuant to the final resolution of a Dispute in accordance with the Dispute Resolution Procedure set out in Schedule 13 [Dispute Resolution Procedure],

in accordance with the provisions of this Agreement and all applicable Laws.

3.2 Limitation on Payments

Other than the payments expressly provided for herein, Project Co will have no right to any further payment from the Authority in connection with the Design, the Construction, the Services or otherwise in connection with the Project.

3.3 Provision of Lands

The Authority will make the Lands and the Existing Hospital Lands available for the Project in accordance with Schedule 7 [Lands] and the parties' rights and obligations in respect of the Lands and the Existing Hospital Lands are set out in such Schedule.

3.4 Representations and Warranties

The Authority represents and warrants to Project Co, as of the Effective Date, that:

- (a) the Authority has full power and capacity to enter into, carry out the transactions contemplated by and duly observe and perform all its obligations contained in this Agreement and all other documents, instruments and agreements required to be executed and delivered by the Authority pursuant to this Agreement;

- (b) the execution and delivery of this Agreement and all documents, instruments and agreements required to be executed and delivered by the Authority pursuant to this Agreement, and the completion of the transactions contemplated by this Agreement, have been duly authorized by all necessary corporate action on the part of the Authority, and this Agreement has been duly executed and delivered by the Authority and constitutes a legal, valid and binding obligation of the Authority enforceable in accordance with its terms, subject to limitations on account of bankruptcy, insolvency, liquidation, reorganization, reconstruction and other similar laws of general application affecting the enforceability of remedies and rights of creditors and subject to availability of equitable remedies such as specific performance and injunction that are in the discretion of a court;
- (c) all required third party consents to the execution by the Authority of, and performance of its obligations under, this Agreement have been received;
- (d) the Authority has the rights and interest in and to the Lands and the Existing Hospital Lands, in each case free and clear of all encumbrances, restrictions or limitations except the Encumbrances and any encumbrances which do not adversely affect, financially or otherwise, the Licence, the Existing Hospital Licence and the ability of Project Co to conduct the Design, the Construction, the Initial Remediation Work or provide the Services as contemplated by this Agreement;
- (e) the parcels or interests comprising the Lands and the Existing Hospital Lands permit the grant of the Licence and the Existing Hospital Licence by the Authority and the conduct by Project Co of the Design, the Construction, the Initial Remediation Work and the provision by Project Co of the Services as contemplated by this Agreement;
- (f) to the extent the chief officer delegated by the Authority for the Project Has Knowledge, there are no facts or information relating to the Project or Disclosed Data which the Authority has intentionally not disclosed to Project Co and which, if learned by Project Co, would reasonably be expected to materially affect Project Co's evaluation of the risks Project Co is assuming pursuant to this Agreement; and
- (g) no injunction or restraining order or other decision, ruling or order of a court or administrative tribunal of competent jurisdiction is in effect which prohibits, restrains, limits or imposes conditions on the ability of the Authority to perform its obligations under this Agreement.

4. PROJECT CO'S GENERAL OBLIGATIONS

4.1 General Project Obligations

Subject to and in accordance with the provisions of this Agreement and all applicable Laws and Permits, Project Co will:

- (a) carry out the Design and the Construction; and

- (b) perform the Services.

4.1A Existing Hospital Obligations

Subject to and in accordance with the provisions of this Agreement and all applicable Laws and Permits, Project Co will:

- (a) provide the Existing Hospital Security;
- (b) perform the Initial Remediation Work during the Existing Hospital Works Period; and
- (c) from the Effective Date to the Initial Remediation Work Completion Date, perform the Design, the Construction and the Initial Remediation Work in compliance with the provisions of this Agreement and in a manner that will not impact the operation of the Existing Hospital during its operation before Service Commencement, including in accordance with the following provisions:
 - (1) Sections 2.10, 4.13, 14.2, 14.3 and 14.4 of this Agreement;
 - (2) Sections 2.6, 6.2, 6.11, 6.12, 6.13, 6.20, 6.21 and 6.23 of Schedule 2 [Design and Construction Protocols];
 - (3) Sections 2.4, 2.6, 3.9, 5.7, 6.8, 6.13, 7.2, 7.3, 7.4, 7.6 and 7.7 of Schedule 3 [Design and Construction Specifications];
 - (4) Section 3.3 of Schedule 6 [Changes, Minor Works and Innovation Proposals];
 - (5) Sections 2.2, 3.2, 3.3, 3.5, 3.6, 4.1 and 4.2 of Schedule 7 [Lands];
 - (6) Sections 1 and 2 of Schedule 14 [Records and Reports]; and
 - (7) Section 2 of Schedule 18 [Completion Documents]

but, specifically excluding any provisions of Schedule 4 [Services Protocols and Specifications] and Schedule 8 [Payments],

(cumulatively, the “**Existing Hospital Obligations**”).

4.2 Records and Reports

Project Co will, at its own cost and expense, retain and maintain the records and reports referred to in Schedule 14 [Records and Reports] in accordance with such Schedule and in a form that is capable of audit by the Authority. Project Co will:

- (a) make all such records available to the Authority for inspection and copying (at the Authority’s expense) during normal business hours upon reasonable notice; and

- (b) upon request from the Authority provide the Authority with electronic copies of any such records as soon as reasonably practicable.

4.3 No Other Business

Project Co will not engage in any business or activity other than the business or activities conducted for the purpose of the Project or otherwise expressly permitted hereunder.

4.4 Project Co Persons

Project Co will, as between itself and the Authority, be responsible for, and not relieved of its obligations hereunder by, the acts, omissions, breaches, defaults, non-compliance, negligence and wilful misconduct of each Project Co Person and all references in this Agreement to any act, omission, breach, default, non-compliance, negligence or wilful misconduct of Project Co will be construed accordingly to include any such act, omission, breach, default, non-compliance, negligence or wilful misconduct committed by a Project Co Person.

4.5 Use of Sub-Contractors

Without limiting Section 4.4, the Authority acknowledges that Project Co may carry out the Design, the Construction and the Services by contracting such obligations to Project Contractors who in turn may contract all or part of their obligations under any Project Contract to one or more Sub-Contractors. In respect of the Project, Project Co will not contract with, nor allow any of its Project Contractors or any Sub-Contractors to contract with, any Person that is a Restricted Person. Notwithstanding the use of Project Contractors or Sub-Contractors, Project Co:

- (a) will not be relieved or excused from any of its obligations or liabilities under this Agreement; and
- (b) will remain principally liable to the Authority for the due observance and performance of all the covenants, obligations, agreements and conditions of this Agreement that are to be observed and performed by Project Co.

4.6 Material Contracts

Project Co will not:

- (a) terminate, or agree to or permit the termination of, all or any material part of any Material Contract except:
 - (i) as required to do so by the Authority pursuant to the provisions of this Agreement;
 - (ii) if there is an event of default under a Material Contract and Project Co terminates it in order to prevent or cure a Project Co Event of Default; or

- (iii) where the termination occurs automatically as a result of the bankruptcy or insolvency of the Material Contract Party pursuant to the terms of the Material Contract;
- (b) make, or agree to or permit the making of:
 - (i) any material amendment of any Material Contract, other than amendments (whether made by Change Certificate or otherwise) that are the direct and reasonable consequence of a Change; or
 - (ii) any departure by any party from any material provision of any Material Contract;
- (c) permit any Material Contract Party to assign or transfer to any Person any of such Material Contract Party's rights or obligations under a Material Contract other than by way of a Sub-Contract that is not a subcontract of all or substantially all of the obligations under the Material Contract or by way of assignment by way of security by a Material Contract Party; or
- (d) enter into, or permit the entering into of, any Material Contract other than those entered into on or before the Effective Date,

unless Project Co has, at its earliest practicable opportunity, submitted to the Authority notice of the proposed course of action (and any relevant documentation) and the Authority has consented to such course of action, such consent not to be unreasonably withheld or delayed. The Authority will give or deny such consent within: (i) 10 Business Days of receipt of such notice and all relevant documentation, if Project Co is seeking to terminate a Material Contract and such Material Contract may, in accordance with its terms, be terminated immediately; and (ii) 30 Business Days of receipt of such notice and all relevant documentation in all other cases, and if the Authority fails to give or deny its consent within such time periods it will be deemed to have given its consent. In determining whether to provide such consent and without limiting the Authority's discretion, it will be reasonable for the Authority to refuse its consent to the proposed course of action if:

- (e) the proposed assignee, transferee or party entering into any Material Contract, or any of its Affiliates, is a Restricted Person; or
- (f) the proposed course of action could, in the reasonable opinion of the Authority, have a material adverse effect on the Authority or the Project.

4.7 Costs of Request for Consent

If Project Co requests consent to a proposed course of action pursuant to Section 4.6, Project Co will pay, without duplication, the Authority's reasonable internal administrative and personnel costs and all reasonable out-of-pocket costs in connection with considering any such request.

4.8 Replacement Material Contract

If any Material Contract at any time lapses, terminates, or otherwise ceases to be in full force and effect (whether by reason of expiry or otherwise), unless the goods, services or rights which were the subject matter of such Material Contract are no longer reasonably required for the Project:

- (a) Project Co will forthwith enter into, or cause to be entered into, a replacement contract or contracts upon the same or substantially similar terms as the contract so replaced (to the extent reasonably practicable); and
- (b) if the Authority and the relevant Material Contract Party had entered into a Material Project Contractor Collateral Agreement with respect to the replaced Material Contract, Project Co will forthwith enter into, or cause the replacement Material Contract Party to enter into, a Material Project Contractor Collateral Agreement.

4.9 Delivery of Amended Material Contracts

If at any time any amendment is made to any Material Contract, or a replacement Material Contract (or any agreement which materially affects the interpretation or application of any Material Contract) is entered into, Project Co will deliver to the Authority a copy of each such amendment or agreement within 10 Business Days of the date of its execution or creation, certified as a true copy by an officer of Project Co.

4.10 Project Co's Representations and Warranties

Project Co represents and warrants to the Authority that:

- (a) Project Co is a general partnership duly formed and validly existing under the laws of Ontario and has full power and capacity to enter into, carry out the transactions contemplated by and duly observe and perform all its obligations contained in this Agreement and all other documents, instruments and agreements required to be executed and delivered by Project Co pursuant to this Agreement;
- (b) not used;
- (c) the information set out in Schedule 12 [Project Co's Ownership Information] is true and correct and there is, as at the date of this Agreement, no outstanding offer, agreement or other arrangement pursuant to which:
 - (i) any Person is obligated to subscribe for or take by means of transfer or by conversion any form of investment, security or voting rights in Project Co; or
 - (ii) the partnership agreement governing Project Co will be amended or otherwise altered;
- (d) none of Project Co, Persons who control Project Co or any Affiliates of those Persons who control Project Co, the Project Contractors and Sub-Contractors are Restricted Persons;

- (e) the execution and delivery of this Agreement and all other documents, instruments and agreements required to be executed and delivered by Project Co pursuant to this Agreement, and the completion of the transactions contemplated by this Agreement, have been duly authorized by all necessary partnership action on the part of Project Co, and this Agreement has been duly executed and delivered by Project Co and constitutes a legal, valid and binding obligation of Project Co enforceable in accordance with its terms, subject to limitations on account of bankruptcy, insolvency, liquidation, reorganization, reconstruction and other similar laws of general application affecting the enforceability of remedies and rights of creditors and subject to availability of equitable remedies such as specific performance and injunction that are in the discretion of a court;
- (f) all required third party consents to the execution by Project Co of, and performance of its obligations under, this Agreement have been received, other than any Permits and other approvals contemplated herein to be obtained after the Effective Date in connection with the Project;
- (g) it has carefully reviewed the whole of this Agreement, including the Design and Construction Protocols, the Design and Construction Specifications, the Services Protocols and Specifications and all applicable Laws, and has taken all steps it considers necessary to satisfy itself that nothing contained herein inhibits or prevents Project Co from performing and completing the Design, the Construction and the Services in accordance with this Agreement in a good and safe manner in accordance with Good Industry Practice so that Project Co achieves and satisfies the requirements of this Agreement; and
- (h) no injunction or restraining order or other decision, ruling or order of a court or administrative tribunal of competent jurisdiction is in effect that prohibits, restrains, limits or imposes conditions on the ability of Project Co to perform its obligations under this Agreement.

The representation and warranty of Project Co in Section 4.10(g) is included only for the purpose of allowing the Authority to rely on it for the purpose of defending or contesting any action brought against the Authority pursuant to this Agreement or any claim by Project Co for damages, extensions of time, additional compensation or any other relief arising pursuant to this Agreement and the Authority may not rely on such representation and warranty for the purpose of bringing any action against Project Co or for the purposes of terminating this Agreement.

Project Co hereby acknowledges receipt of notice of Section 46 of the *Financial Administration Act* (Northwest Territories).

4.11 Disclosed Data

It is Project Co's responsibility to have conducted its own analysis and review of the Project and, before the execution of this Agreement, to have taken all steps it considers necessary to satisfy itself as to the accuracy, completeness and applicability of any Disclosed Data upon which it places reliance and to assess all risks related to the Project. Subject to Section (e) of the definition of Compensation Event and the Authority's obligations set out in Schedule 7 [Lands], Project Co will not be entitled to and will not

make (and will ensure that no Project Contractor or Sub-Contractor makes) any claim against the Authority or any Authority Indemnified Persons, whether in contract, tort or otherwise including any claim in damages for extensions of time or for additional payments under this Agreement on the grounds:

- (a) of any misunderstanding or misapprehension in respect of the Disclosed Data;
- (b) that the Disclosed Data was incorrect or insufficient; or
- (c) that incorrect or insufficient information relating to the Disclosed Data was given to it by any Person other than the Authority,

nor will Project Co be relieved from any obligation imposed on or undertaken by it under this Agreement on any such ground.

4.12 Responses to Authority Inquiries

Unless otherwise specified in this Agreement, Project Co will respond in writing to all written inquiries received from the Authority as soon as reasonably practicable and in any event within 10 Business Days of receipt of such inquiry or such longer period as the circumstances and content of the inquiry may reasonably require.

4.13 Restrictions on Use of Hazardous Substances

Unless otherwise expressly required or permitted under this Agreement, Project Co will not install, use or store on the Lands, the Existing Hospital Lands or adjacent property any materials, equipment or apparatus, the installation, use or storage of which is likely to cause or in fact causes the generation, accumulation or migration of any Hazardous Substance in contravention of any applicable Laws. Without limiting the generality of the foregoing, Project Co will not use the Lands or the Existing Hospital Lands to dispose of, handle or treat any Hazardous Substances, in a manner that would cause the Lands, the Existing Hospital Lands, or any adjacent property to become a contaminated site under applicable Laws.

5. FINANCING OF THE PROJECT

5.1 Compliance with Senior Financing Agreements

Project Co will keep the Senior Financing Agreements in good standing and will ensure that none of the terms and conditions of the Senior Financing Agreements will prevent Project Co from performing its obligations under this Agreement. If at any time Project Co receives a notice that an “event of default”, any event entitling the Senior Lenders to enforce any security or any other similar event has occurred under the Senior Financing Agreements, Project Co will forthwith deliver to the Authority a copy of such notice.

5.2 Changes to Senior Financing Agreements

Project Co will not without the written consent of the Authority, not to be unreasonably withheld or delayed, terminate, amend, assign or otherwise modify the Senior Financing Agreements, or waive or exercise any of its rights under the Senior Financing Agreements or enter into any replacement Senior

Financing Agreement or any agreement which affects the interpretation or application of any Senior Financing Agreements if such action would:

- (a) adversely affect Project Co's ability to perform its obligations under this Agreement; or
- (b) have the effect of increasing any liability or potential liability of the Authority other than as contemplated in the Financial Model.

If at any time any amendment is made to any Senior Financing Agreement or Project Co enters into any replacement Senior Financing Agreement (or any agreement which affects the interpretation or application of any Senior Financing Agreement), Project Co will deliver to the Authority a copy of each such amendment or agreement within 5 Business Days of the date of its execution or creation, certified as a true copy by an officer of Project Co.

5.3 Consent Required for Refinancing

Except for an Exempt Refinancing, Project Co will not enter into any Refinancing without the written consent of the Authority, not to be unreasonably withheld or delayed. Without limitation, it will be reasonable for the Authority to withhold consent if such Refinancing occurs before the Service Commencement Date, has a material adverse effect on Project Co's ability to perform its obligations under this Agreement, increases any liability or potential liability of the Authority (unless the Authority is specifically compensated for such liability or potential liability) or is with a Restricted Person.

5.4 Refinancing Process

If Project Co intends to undertake a Qualifying Refinancing, Project Co will notify the Authority of such intention at least 80 Business Days (or such later date agreed by the Authority, acting reasonably) before the anticipated completion date of such Refinancing and will include with such notice all applicable information then available to Project Co (including any of the information set out below in this Section 5.4 if and to the extent available to Project Co at that time). Project Co will keep the Authority informed of the progress of the proposed Refinancing, will provide the Authority with additional information as it is available, and will consult with and reasonably take into account the views of the Authority during the Refinancing process. Without limiting the foregoing, as soon as reasonably available, and in any event no later than 20 Business Days (or such later date agreed by the Authority, acting reasonably) before the anticipated completion date of such Refinancing, Project Co will provide to the Authority (not necessarily all at the same time):

- (a) all proposed revisions to the Senior Financing Agreements;
- (b) a copy of the proposed updated Financial Model both before and after the Refinancing;
- (c) the basis for the assumptions and calculations used in the proposed updated Financial Model;
- (d) particulars of:

- (i) any increase in the principal amount of all funding for the Project committed under the Senior Financing Agreements that will result from the proposed Refinancing;
 - (ii) the nature (and estimated amount if reasonably capable of being calculated or estimated) of any other potential increase in the liability of the Authority, including on early termination of this Agreement, that would be reasonably likely to arise from the proposed Refinancing;
 - (iii) any effect on Project Co's ability to perform its obligations under this Agreement;
 - (iv) the terms of the proposed Refinancing;
 - (v) the lenders and other parties proposed to be involved in the proposed Refinancing; and
 - (vi) the financing instruments to be used to carry out the proposed Refinancing and their key attributes (especially as to those attributes that would or could affect the liability of the Authority on any early termination of this Agreement);
- (e) a statement setting out Project Co's estimate of the resulting Refinancing Gain, including the Authority's share thereof expressed in terms of:
- (i) the payment described in Section 5.6(a) (Payment to the Authority) (including the estimated timing of receipt thereof by the Authority); and
 - (ii) the reduction of Service Payments described in Section 5.6(b) (Payment to the Authority); and
- (f) a schedule for implementation of the proposed Refinancing including the principal milestones and proposed dates for the achievement of such milestones (including the estimated date for closing of the proposed Refinancing).

Project Co will promptly provide all other documents and information related to the proposed Refinancing as the Authority may reasonably request. If any change is proposed to the information provided to the Authority pursuant to the above, including information referred to in Sections 5.4(a) to 5.4(f), Project Co will promptly (and in any event not less than 10 Business Days before the completion date of the proposed Refinancing) provide the Authority with full details of the change. Project Co will only proceed with a Qualifying Refinancing in accordance with the information provided to the Authority in accordance with this Section 5.4 and in compliance with the other applicable provisions of this Section 5.

5.5 The Authority's Share of Refinancing Gain

The Authority will be entitled to receive a [REDACTED] share of any Refinancing Gain arising from a Qualifying Refinancing. The Authority's share will be calculated as at the time of each Qualifying Refinancing.

5.6 Payment to the Authority

The Authority may elect to receive its share of any Refinancing Gain as:

- (a) a single payment, in accordance with Section 10.1 (Lump Sum Payments), in an amount no greater than any Distribution made by Project Co arising as a result of the Refinancing;
- (b) a reduction, in accordance with Section 10.3 (Adjustments to Service Payments), in the Service Payments over the remainder of the Term; or
- (c) a combination of (a) and (b).

5.7 Calculation of Refinancing Gain

The Authority and Project Co will negotiate in good faith the basis and method of calculation of the Refinancing Gain and payment of the Authority's share of the Refinancing Gain, taking into account how the Authority has elected to receive its share of the Refinancing Gain pursuant to Section 5.6 and the profile of the Refinancing Gain. The Refinancing Gain will be calculated after taking into account the reasonable and proper professional costs that Project Co directly incurs in relation to the Refinancing and, if applicable, the Authority's costs that Project Co pays pursuant to Section 5.8. If the Authority and Project Co are unable to agree on the basis and method of calculation of the Refinancing Gain or the payment of the Authority's share, the Dispute will be determined in accordance with the Dispute Resolution Procedure.

5.8 The Authority's Expenses

Project Co will pay the Authority's reasonable internal administrative and personnel costs and all reasonable out-of-pocket costs in connection with a consent under Section 5.2 or 5.3. The amounts payable under this Section 5 are payable even if the Refinancing Gain is determined to be zero.

5.9 Audit Rights

The Authority will have unrestricted rights of audit at any time (whether before or after the applicable event) over any proposed Financial Model, books, records and other documentation (including any aspect of the calculation of any Refinancing Gain) used in connection with any Refinancing or any other matter for which Project Co requires consent from the Authority under this Section 5.

6. INSURANCE, DAMAGE AND DESTRUCTION

6.1 Insurance Coverage

Subject to Section 6.15(b), Project Co will take out, maintain in force, pay for and renew, or cause to be taken out, maintained in force, paid for and renewed, insurance for the Project as set out in Schedule 5 [Insurance Requirements].

6.2 Agreement Not Affected by Damage or Destruction

Except as otherwise expressly provided, the partial destruction or damage or complete destruction by any event causing damage to the Facility will not permit either party to terminate this Agreement or entitle Project Co to surrender possession of the Facility or to demand any increase in any amounts payable to Project Co under this Agreement and all of the provisions of this Agreement, including Section 8 (Supervening Events) will continue to apply.

6.3 Project Co's Obligations - Damage or Destruction

Subject to Section 6.4, and without prejudice to Section 8, if all or any part of the Facility is damaged or destroyed, Project Co will repair, replace or restore the part of the Facility so damaged or destroyed in accordance with the Design and Construction Specifications subject only to:

- (a) applicable Laws; and
- (b) the Authority agreeing to pay to Project Co:
 - (i) the amount, if any, by which the cost of such repair, replacement or restoration exceeds the maximum amount of insurance coverage required under this Agreement for such risk (which for greater certainty is the maximum amount of coverage prior to any deductibles for which Project Co is responsible pursuant to Schedule 5 [Insurance Requirements]); or
 - (ii) if no insurance coverage is required under this Agreement for such risk, an amount equal to the total costs of such repair, replacement or restoration,

and if the Authority agrees, the Authority will pay such amounts within 30 calendar days of receipt of one or more invoices from Project Co indicating that such amounts are due and payable by Project Co in connection with such repair, replacement or restoration.

For the purposes of this Section 6.3, the maximum amount of insurance coverage is in respect of insurance required to be obtained by Project Co, the full amount of coverage required under this Agreement for such risk prior to any deductibles for which Project Co is responsible pursuant to Schedule 5 [Insurance Requirements].

6.4 Project Co's Obligations - Material Damage or Destruction

If the Facility suffers damage or destruction that is likely to cost more than [REDACTED] (Index Linked) to repair, replace and restore:

- (a) Project Co will, as soon as practicable and in any event within 20 Business Days of such damage or destruction, and before undertaking any material remedial work (other than any emergency work required to stabilize other parts of the Facility or to facilitate the continued provision of the Services to other parts of the Facility), provide the Authority with a draft plan (the "**Draft Reinstatement Plan**") for the carrying out of the works necessary (the "**Reinstatement Works**") to repair, replace and restore the damaged or

destroyed portions of the Facility and related assets, and containing to the extent possible the details required to be included in the Reinstatement Plan under (d) below;

- (b) as soon as reasonably practicable and in any event within 20 Business Days after the delivery of the Draft Reinstatement Plan, the Authority:
 - (i) will provide Project Co with any comments it may have on the Draft Reinstatement Plan; and
 - (ii) if it has decided that the Facility is not required to be reinstated in the same form as prior to the damage or destruction, will issue a Preliminary Change Instruction to that effect;
- (c) as soon as reasonably practicable and in any event within 10 Business Days after receipt of the Authority's comments pursuant to Section 6.4(b)(i), Project Co will deliver to the Authority a revised plan (the "**Reinstatement Plan**") amending the Draft Reinstatement Plan to reasonably take into account the comments received from the Authority and those changes to the Draft Reinstatement Plan necessary to reflect the contractual terms agreed (as negotiated and finalised) with the person effecting the Reinstatement Works; and
- (d) the Reinstatement Plan will set out in as much detail as is reasonable in the circumstances:
 - (i) the identity of the person, or (if Project Co is seeking competitive tenders) persons intended, to carry out the Reinstatement Works;
 - (ii) the terms and timetable or (if not then established) the reasonably anticipated terms and timetable upon which the Reinstatement Works are to be effected (including the date upon which the Facility is reasonably expected to become fully operational again and the Services to be fully provided);
 - (iii) the impact that implementation of the Reinstatement Plan will have on the revenues of Project Co under this Agreement and on the payment obligations of Project Co under the Project Contracts, including in respect of Life Cycle Requirements;
 - (iv) the total cost or (if not then established) the reasonably anticipated total cost of the Reinstatement Works; and
 - (v) the impact of any Change requested by the Authority as part of the reinstatement.

Thereafter, unless a party elects to terminate this Agreement (in accordance with the provisions of Section 6.6, 6.7, 6.8 or 6.9 or otherwise), subject to Section 6.3, Project Co will repair, replace or restore the Facility, subject to applicable Laws.

6.5 Financial Model Update

Upon delivery of the Reinstatement Plan, Project Co will amend the Financial Model based on the following assumptions:

- (a) that the Reinstatement Plan will be effected in accordance with its terms;
- (b) that the payments under the Senior Financing Agreements (including any amendments agreed between Project Co and the Senior Lenders in connection with the Reinstatement Plan in respect of which a consent request has been submitted to the Authority) to be paid during the period of the Reinstatement Plan will be met without any rescheduling; and
- (c) that payments in respect of any Change comprised in the Reinstatement Plan will be determined in accordance with Schedule 6 [Changes, Minor Works and Innovation Proposals],

and will deliver the updated Financial Model to the Authority for its approval, not to be unreasonably withheld or delayed.

6.6 Authority Election Not to Reinststate

The Authority may, by notice to Project Co within 20 Business Days after receipt of the Reinstatement Plan, at its discretion elect not to reinstate the Facility, terminate this Agreement and pay compensation to Project Co in accordance with Section 2 of Schedule 9 [Compensation on Termination].

6.7 Insufficient Insurance

If:

- (a) the Facility is completely or substantially destroyed;
- (b) the cost to repair, replace or restore the Facility exceeds the maximum amount of insurance coverage (which for greater certainty is the maximum amount of coverage prior to any deductibles for which Project Co is responsible pursuant to Schedule 5 [Insurance Requirements]) required under this Agreement for the risk that caused the destruction; and
- (c) neither the Authority nor Project Co has agreed to pay the amount by which the cost to repair, replace or restore the Facility exceeds the Insurance Proceeds and Insurance Receivables with respect to such destruction,

at any time on or after 20 Business Days after delivery of the Reinstatement Plan to the Authority, either party may, by notice to the other party, terminate this Agreement, in which case the Authority will pay compensation to Project Co in accordance with Section 5 of Schedule 9 [Compensation on Termination].

6.8 Economic Reinstatement Test During Construction

Project Co may, by notice to the Authority, terminate this Agreement if:

- (a) prior to the Service Commencement Date the Facility suffers damage or destruction that is likely to cost more than [REDACTED] (Index Linked) to repair, replace and restore; and
- (b) on the date determined (in accordance with this Agreement) to be the revised Service Commencement Date following such reinstatement (the "Forecast Service Commencement Date") the Project Reinstatement Ratio (as defined below) would be less than 1.10.

If this Agreement is terminated in accordance with this Section 6.8, the Authority will pay compensation to Project Co in accordance with Section 4 of Schedule 9 (Compensation on Termination).

In this Section 6.8, "**Project Reinstatement Ratio**" means the quotient of:

- (c) the sum of:
 - (i) the present value as at the Forecast Service Commencement Date of the projected Free Cash Flow (as defined in the Trust Indenture) from the Forecast Service Commencement Date to and including the Senior Bonds Maturity Date (as defined in the Trust Indenture), calculated by discounting such Free Cash Flow back to the Forecast Service Commencement Date using a discount rate equal to the annual Senior Bonds Interest Rate (as defined in the Trust Indenture); and
 - (ii) the balance of the Debt Service Reserve Account (as defined in the Trust Indenture) as at the Forecast Service Commencement Date,divided by:
- (d) the amount outstanding on the Senior Bonds (as defined in the Trust Indenture) as at the Forecast Service Commencement Date.

6.9 Uncollectible Insurance Receivables

If at any time while Project Co is relieved of its obligations under Sections 6.3 or 6.4 by reason of the Relief Event described in Section (f) of the definition of Relief Event in Schedule 1 [Definitions and Interpretation]:

- (a) Project Co has complied with its obligations hereunder with respect to such Relief Event; and
- (b) notwithstanding such compliance by Project Co collection of the applicable Insurance Receivables is not possible using all reasonable efforts,

either party may, by notice to the other party, terminate this Agreement, in which case the Authority will pay compensation to Project Co in accordance with Section 5 of Schedule 9 [Compensation on Termination].

6.10 Application of Insurance Proceeds If No Termination

Unless a party has terminated this Agreement (including pursuant to Section 6.6, 6.7, 6.8 or 6.9) Project Co will cause all:

- (a) applicable Insurance Proceeds which Project Co has received;
- (b) applicable Insurance Proceeds which Project Co is entitled to receive;
- (c) amounts which the Authority has agreed to pay as contemplated in Section 6.3(b); and
- (d) amounts which Project Co has agreed to pay to cover the amount by which the cost to repair, replace or restore the Facility exceeds the Insurance Proceeds and Insurance Receivables with respect to complete or substantial destruction,

to be applied to the reinstatement of the Facility in accordance with the terms of this Agreement and the Insurance Trust Agreement.

6.11 Application of Insurance Proceeds In Case of Termination

If a party has terminated this Agreement pursuant to Section 6.6, 6.7 or 6.8:

- (a) any Insurance Proceeds received prior to the Termination Payment Date by Project Co in respect of damage to the Facility and not already applied to the repair of such damage will first be applied towards the Termination Payment and any Insurance Proceeds remaining after such application will be paid to the Authority; and
- (b) on the Termination Payment Date, Project Co will assign to the Authority the benefit of all Insurance Receivables which have been taken into account in calculating the Termination Payment.

6.12 Standards of Replacement, Repair or Reconstruction

Any replacement, repair, or reconstruction of the Facility or any part thereof pursuant to the provisions of Sections 6.3 or 6.4 will be made or done in compliance with the Design and Construction Protocols and the Design and Construction Specifications, subject to any agreement made between the Authority and Project Co to revise the Design and Construction Protocols or the Design and Construction Specifications as they pertain to any replacement, repaired or reconstructed Facility.

6.13 Mitigation

Project Co and the Authority will take all reasonable steps to mitigate the effects of any risks or claims covered by this Section 6 (including minimizing the amount of any costs and expenses which might result).

6.14 Risks Becoming Uninsurable

Each party will, forthwith upon Having Knowledge, notify the other if a Principal Insured Risk becomes or is expected to become Uninsurable. If both parties agree or it is determined in accordance with the Dispute Resolution Procedure that the relevant Principal Insured Risk is or is about to become Uninsurable and that the Principal Insured Risk being Uninsurable is not and will not be caused by the actions or omissions of Project Co or any Project Co Person or the Authority or any Authority Person contrary to Schedule 5 [Insurance Requirements], then the parties together with their respective insurance advisors will meet to discuss the means by which such Principal Insured Risk should be managed (including considering the feasibility of self-insurance by either or all parties).

6.15 Consequences of Risks Becoming Uninsurable

If the requirements of Section 6.14 are satisfied but the parties cannot agree within 20 Business Days on how to manage a Principal Insured Risk that becomes Uninsurable (the “**Uninsurable Risk**”):

- (a) if the Uninsurable Risk is third party liability, if and for so long as the Uninsurable Risk is Uninsurable, the Authority may by notice to Project Co terminate this Agreement whereupon Project Co will be entitled to compensation on termination as provided in Section 5 of Schedule 9 [Compensation on Termination];
- (b) if the Uninsurable Risk is not third party liability or if (and for as long as) the Authority has not terminated this Agreement under Section 6.15(a), then this Agreement will continue, but neither Project Co nor the Authority will be obligated by this Agreement to maintain insurance in respect of the Uninsurable Risk and references in this Agreement to the insurance required by this Section 6 (Insurance, Damage and Destruction) or Schedule 5 [Insurance Requirements] will be construed accordingly. In such event the Service Payments will thereafter be adjusted in accordance with Section 10.3 (Adjustments to Service Payments) by agreement of the parties acting reasonably or, failing such agreement, by the Dispute Resolution Procedure, from the date upon which the Uninsurable Risk became Uninsurable, to reflect any savings in Project Co’s insurance cost as a result of Project Co not having to insure against the Uninsurable Risk; and
- (c) subject to Section 6.16, on the occurrence of the Uninsurable Risk the Authority will either:
 - (i) pay to Project Co an amount equal to the insurance proceeds that would have been payable directly to Project Co under the relevant policies in respect of the Uninsurable Risk had the relevant insurance continued to be available and in effect, and this Agreement will continue; or
 - (ii) by notice to Project Co, terminate this Agreement whereupon Project Co will be entitled to compensation on termination as provided in Section 5 of Schedule 9 [Compensation on Termination],

except that the Authority may not in any such case terminate this Agreement pursuant to Section 6.15(c)(ii) if Project Co releases the Authority from all obligations under Section

6.15(c)(i) and deposits into the Insurance Trust Account an amount equal, in the reasonable opinion of the Authority, to the insurance proceeds, and all amounts in respect of deductibles and waiting periods that would have been the responsibility of Project Co under Section 5.7 of Schedule 5 [Insurance Requirements], that would have been payable in respect of the Uninsurable Risk that occurred had the relevant insurance continued to be available and in effect.

6.16 Third Party Liability Insurance as an Uninsurable Risk

If this Agreement is terminated pursuant to Section 6.15(c)(ii) and at the date of such termination third party liability is an Uninsurable Risk, and if:

- (a) there is an outstanding third party claim against Project Co at the Termination Date; or
- (b) following the Termination Date a third party claim is subsequently made against Project Co in respect of an event or circumstance that occurred before the Termination Date,

which in either case would have been covered by the third party liability insurance that either the Authority or Project Co would have been required to carry had that risk not been an Uninsurable Risk, then the Authority will pay to Project Co the amount for which Project Co becomes liable in respect of such claim in addition to the compensation payable pursuant to Section 6.15(c)(ii).

6.17 Subrogation

If the Authority makes any payment to Project Co pursuant to Section 6.15(c)(i) or Section 6.16, then the Authority, to the extent of the amount paid, will be subrogated to Project Co's rights against any third party in respect of the occurrence or claim as a result of which the payment was made, other than any third party that was an insured under the last policy of insurance to cover the Uninsurable Risk before it became Uninsurable, to the extent the insurers did not have a right of subrogation against such third party.

6.18 Continuing Attempts to Insure Uninsurable Risks

When there is an Uninsurable Risk for which Project Co is responsible to obtain insurance under Schedule 5 [Insurance Requirements], Project Co will approach the insurance market on a regular basis and in any event at regular intervals of no longer than six months to establish whether the Uninsurable Risks remain Uninsurable.

6.19 Uninsurable Risks Becoming Insurable

Where a risk that was previously an Uninsurable Risk ceases to be so and Project Co becomes aware or is informed by the other party that this is the case, Project Co will forthwith take out, maintain and pay for or cause to be taken out, maintained and paid for insurance in accordance with the requirements of this Agreement in respect of the risk, and in any case:

- (a) Sections 6.14, 6.15, 6.16 and 6.18 will no longer apply to the risk so long as it is not an Uninsurable Risk; and

- (b) the Service Payments will be adjusted pursuant to Section 10.3 (Adjustments to Service Payments) by agreement of the parties acting reasonably or, failing such agreement, by the Dispute Resolution Procedure, from the date upon which the Uninsurable Risk became insurable, to reflect any increase in Project Co's insurance cost as a result of having to insure the risk that ceased to be an Uninsurable Risk.

7. CHANGES, MINOR WORKS AND INNOVATION PROPOSALS

7.1 Changes Required by the Authority

The Authority may require Changes in accordance with Schedule 6 [Changes, Minor Works and Innovation Proposals].

7.2 Innovation and Value Engineering

Project Co may submit an Innovation Proposal for consideration by the Authority in accordance with Schedule 6 [Changes, Minor Works and Innovation Proposals].

7.3 Minor Works

The Authority may require Minor Works in accordance with Schedule 6 [Changes, Minor Works and Innovation Proposals].

8. SUPERVENING EVENTS

8.1 Supervening Events

If:

- (a) a Compensation Event, Relief Event or Excusing Event occurs, Project Co may; or
- (b) a Force Majeure Event or Eligible Change in Law Event occurs, either party may,

apply for relief from its obligations, extensions of time, claim compensation or claim a termination right under this Agreement to the extent provided in this Section 8 (Supervening Events). The “**Applicant**” means the party making such application.

8.2 Procedures Upon the Occurrence of a Supervening Event

The following procedure will apply if a Supervening Event occurs:

- (a) as soon as practicable, and in any event within 5 Business Days after the Applicant Has Knowledge that the Supervening Event has caused, or is reasonably likely to cause, an entitlement under this Section 8 (Supervening Events), the Applicant will give to the other party a notice (“**Supervening Event Notice**”) identifying the particular Supervening Event and summarizing, to the extent the Applicant Has Knowledge, the consequences and the nature of the Applicant's claim;

- (b) within 10 Business Days after delivery by the Applicant of a Supervening Event Notice, to the extent the Applicant Has Knowledge, the Applicant will give to the other party:
 - (i) additional details, including available supporting documentation, in support of its claim; and
 - (ii) if applicable, a detailed breakdown of all Direct Losses incurred or which will be incurred or other compensation or relief sought by Project Co, if it is the Applicant, as a result of the Supervening Event;
- (c) from time to time thereafter the Applicant will notify the other party if at any time it receives or becomes aware of any further information relating to the Supervening Event, giving details of that information to the extent that such information is new or renders information previously submitted materially inaccurate or misleading. In particular, a party claiming relief as a result of a Force Majeure Event will notify the other as soon as the Force Majeure Event has ceased and of the time when performance of its affected obligations can be resumed;
- (d) a party may make multiple but not duplicative claims in respect of a Supervening Event and both parties may make claims in respect of the same Supervening Event;
- (e) where the Authority is claiming the benefit of an Eligible Change in Law Event, Project Co will provide the Authority information reasonably requested in order to make its claim;
- (f) the Applicant must demonstrate:
 - (i) it could not have avoided such occurrence or the consequences of the Supervening Event by steps which it might reasonably be expected to have taken provided that, in the case of the Authority, the Authority is not required to take any steps that are referred to in Sections 2.6(a), 2.6(b) or 2.6(c);
 - (ii) if applicable, the Supervening Event caused or will cause the Applicant to incur a Direct Loss, a delay in the Project Schedule or the need for relief from other obligations under this Agreement; and
 - (iii) in the case of Project Co, it has complied with its mitigation obligations pursuant to Section 2.5 and in the case of the Authority, it has complied with its mitigation obligations pursuant to Section 2.6;
- (g) the Applicant will advise whether, in the Applicant's opinion, any amendments should be considered to this Agreement, any Material Contract or any Senior Financing Agreement as a result of the Supervening Event; and
- (h) the parties will meet within 15 Business Days of delivery of the Supervening Event Notice to consult and seek to agree to the effect of the Supervening Event and if the parties, within 10 Business Days following the meeting, have not agreed to the occurrence or the effect of the Supervening Event, either party may refer the question of whether a

Supervening Event has occurred, whether the conditions in Section 8.2(f) above have been satisfied or the extent of relief or compensation to which the affected party is entitled, for resolution in accordance with the Dispute Resolution Procedure.

8.3 Project Co's Entitlements Upon Occurrence of a Compensation Event

Subject to Section 8.12, if at any time a Compensation Event has occurred and Project Co has given the Authority a Supervening Event Notice related thereto:

- (a) Project Co is relieved from any liability or consequence (including termination by the Authority) under this Agreement arising from any delay or failure in performing any of its obligations under or in connection with this Agreement;
- (b) the Service Payments will be calculated as if the Compensation Event had not occurred based on the Reasonably Expected Performance of Project Co, except that Avoidable Costs and applicable Insurance Proceeds and insurance proceeds which Project Co would have recovered as a result of the Compensation Event if it had complied with the requirements of this Agreement or any policy of insurance maintained or required to be maintained under this Agreement will be deducted therefrom;
- (c) the Authority will pay to Project Co compensation in respect of a Compensation Event calculated on the basis that Project Co will be placed in no better or worse position than it would have been in had a Compensation Event not occurred and taking into consideration the following (without duplication):
 - (i) any Direct Losses (including the amount of any applicable insurance deductibles and calculated without netting out Insurance Receivables) resulting from the Compensation Event;
 - (ii) any net increase or decrease in the costs of Project Co performing its obligations under this Agreement resulting from the Compensation Event; and
 - (iii) the Service Payments payable to Project Co,except that:
 - (iv) Avoidable Costs and applicable Insurance Proceeds and insurance proceeds which Project Co would have recovered as a result of the Compensation Event if it had complied with the requirements of this Agreement or any policy of insurance maintained or required to be maintained under this Agreement will be deducted therefrom; and
 - (v) no Indirect Losses will be taken into consideration;
- (d) concurrent with the first payment of any compensation by the Authority under Section 8.3(c), Project Co will assign to the Authority its rights to all applicable Insurance Receivables (whether or not Project Co has made a claim); and

- (e) if the Compensation Event occurs prior to the Service Commencement Date, the Project Schedule will be amended and the Target Service Commencement Date, the Longstop Date and the dates set out in the Phasing Plan will be postponed by such time as is reasonable in the circumstances to take account of the effect of the delay caused by the Compensation Event, but the Expiry Date will not be extended.

8.4 Project Co's Entitlements Upon Occurrence of a Relief Event

Subject to Section 8.12, if at any time a Relief Event has occurred and Project Co has given the Authority a Supervening Event Notice related thereto:

- (a) Project Co is relieved from any liability or consequence (including termination by the Authority, except as provided for in this Section 8.4) under this Agreement arising from any delay or failure in performing any of its obligations under this Agreement, except that, with respect to a Relief Event occurring after the Service Commencement Date, nothing will affect any entitlement of the Authority to make Deductions and the Authority will only be obligated to make Service Payments to the extent that the performance or other criteria for Service Payments are met in accordance with the applicable provisions of this Agreement notwithstanding the Relief Event;
- (b) if the Relief Event occurs prior to the Service Commencement Date:
 - (i) the Project Schedule will be amended and the Target Service Commencement Date, the Longstop Date and the dates set out in the Phasing Plan will be postponed by such time as is reasonable in the circumstances to take account of the effect of the delay caused by the Relief Event, but the Expiry Date will not be extended;
 - (ii) for the period that the Service Commencement Date is delayed to a date after the Target Service Commencement Date (as it was prior to having been postponed pursuant to Section 8.4(b)(i)) as a result of one or more of the Relief Events described in (b), (c), (i) or (l) of the definition of Relief Event, the Authority will pay to Project Co an amount equal to the Senior Debt Service Amount for such period less applicable Insurance Proceeds and insurance proceeds which Project Co would have recovered as a result of the Relief Event if it had complied with the requirements of this Agreement or any policy of insurance maintained or required to be maintained under this Agreement; and
 - (iii) concurrent with the first payment of any amount by the Authority pursuant to Section 8.4(b)(ii), Project Co will assign to the Authority its rights to all applicable Insurance Receivables (whether or not Project Co has made a claim);
- (c) if the Relief Event, or its effects, persists or is likely to persist for more than 180 days after the date a Supervening Event Notice is delivered by the Applicant, either party may at any time so long as such Relief Event is, or such effect is, continuing and subject to Section 14.2, terminate this Agreement by notice to the other party;

- (d) if the Authority gives notice to Project Co under Section 8.4(c) terminating this Agreement, Project Co will have the option either to accept such notice or to respond in writing on or before the date falling 10 Business Days after the date of receipt of such notice stating that it requires this Agreement to continue, in which case Project Co's rights to relief under this Section 8.4 in respect of the Relief Event will cease and the Authority's termination notice will be deemed null and void;
- (e) if Project Co gives notice to the Authority under Section 8.4(c) terminating this Agreement, the Authority will have the option either to accept such notice or to respond in writing on or before the date falling 10 Business Days after the date of receipt of such notice stating that it requires this Agreement to continue. If the Authority gives Project Co such response then:
 - (i) Project Co's termination notice will be deemed null and void and Project Co, insofar as it is able to do so, will continue to perform its obligations in accordance with the provisions of this Agreement;
 - (ii) the Relief Event will be deemed to constitute a Compensation Event occurring as of the date on which the Relief Event first occurred;
 - (iii) at any time so long as the Supervening Event referred to in Section 8.4(e)(ii) is continuing, the Authority may terminate this Agreement by notice to Project Co; and
 - (iv) Project Co may at any time so long as the Supervening Event referred to in Section 8.4(e)(ii) is continuing after a further period of 180 days after the date on which Project Co delivered the termination notice pursuant to Section 8.4(c) terminate this Agreement by notice to the Authority;
- (f) if this Agreement is terminated pursuant to this Section 8.4, Project Co will be entitled to compensation on such termination in accordance with Section 5 of Schedule 9 [Compensation on Termination]; and
- (g) Deductions made while Project Co is entitled to relief under this Section 8.4 will not be counted (either during or following the relevant Relief Event) for the purposes of Sections 11.1(b) or 12.1(h) or Sections 6.7 or 6.8 of Schedule 4 [Services Protocols and Specifications].

8.5 Project Co's Entitlements Upon Occurrence of an Excusing Event

Subject to Section 8.12, if during the Operating Period an Excusing Event has occurred and Project Co has given the Authority a Supervening Event Notice related thereto:

- (a) Project Co is relieved from any liability or consequence (including termination by the Authority) under this Agreement arising from any delay or failure in performing any of its obligations; and

- (b) the Service Payments will be calculated as if the Excusing Event had not occurred based on the Reasonably Expected Performance of Project Co, except that Avoidable Costs and applicable Insurance Proceeds and Insurance Receivables and insurance proceeds which Project Co would have recovered if it had complied with the requirements of this Agreement or any policy of insurance maintained or required to be maintained under this Agreement will be deducted therefrom.

8.6 Parties' Entitlements Upon Occurrence of a Force Majeure Event

Subject to Section 8.12, if at any time a Force Majeure Event has occurred and the Applicant has given the other party a Supervening Event Notice related thereto:

- (a) the Applicant is relieved from any liability or consequence (including termination by the Authority except as provided for in this Section 8.6) under this Agreement arising from any delay or failure in performing any of its obligations under this Agreement, except that nothing will affect any entitlement of the Authority to make Deductions and the Authority will only be obligated to make Service Payments to the extent that the performance or other criteria for Service Payments are met notwithstanding the Force Majeure Event;
- (b) if the Applicant is Project Co and the Force Majeure Event occurs prior to the Service Commencement Date, the Project Schedule will be amended and the Target Service Commencement Date, the Longstop Date and the dates set out in the Phasing Plan will be postponed by such time as is reasonable in the circumstances to take account of the effect of the delay caused by the Force Majeure Event, but the Expiry Date will not be extended;
- (c) if a Force Majeure Event occurs and it, or its effects, persists or is likely to persist for more than 180 days after the date a Supervening Event Notice is delivered by the Applicant, either party may at any time so long as such Force Majeure Event is, or such effect is, continuing, terminate this Agreement by notice to the other party;
- (d) if Project Co gives notice to the Authority under Section 8.6(c) terminating this Agreement, the Authority will have the option either to accept such notice or to respond in writing on or before the date falling 10 Business Days after the date of receipt of such notice stating that it requires this Agreement to continue. If the Authority gives Project Co such response then:
 - (i) Project Co's termination notice will be deemed null and void and Project Co, insofar as it is able to do so, will continue to perform its obligations in accordance with the provisions of this Agreement;
 - (ii) the Force Majeure Event will be deemed to constitute a Compensation Event occurring as of the date the Force Majeure Event first occurred;
 - (iii) at any time so long as the Compensation Event referred to in Section 8.6(d)(ii) is continuing, the Authority may terminate this Agreement by notice to Project Co; and

- (iv) Project Co may at any time so long as the Compensation Event referred to in Section 8.6(d)(ii) is continuing after a further period of 180 days after the date on which Project Co delivered the termination notice pursuant to Section 8.6(c), terminate this Agreement by notice to the Authority;
- (e) if this Agreement is terminated pursuant to Section 8.6(c) or Sections 8.6(d)(iii) or 8.6(d)(iv), Project Co will be entitled to compensation on such termination in accordance with Section 5 of Schedule 9 [Compensation on Termination]; and
- (f) Deductions made while Project Co is entitled to relief under this Section 8.6 will not be counted (either during or following the relevant Force Majeure Event) for the purposes of Sections 11.1(b) or 12.1(h) or Sections 6.7 or 6.8 of Schedule 4 [Services Protocols and Specifications].

8.7 Parties' Entitlements Upon Occurrence of an Eligible Change in Law Event

Subject to Section 8.12, if at any time an Eligible Change in Law Event has occurred and the Applicant has given the other party a Supervening Event Notice related thereto:

- (a) subject to Section 8.7(c), in the case of a Relevant Change in Law, Project Co will be entitled to compensation for Direct Losses and the Service Payments will be increased or decreased to compensate for any increase or decrease (as the case may be) in the net cost to Project Co of performing the Services;
- (b) subject to Section 8.7(c), in the case of a Discriminatory Change in Tax Law Project Co or the Authority will be entitled to compensation for any revenue loss or revenue gain for Project Co and any Partner (as the case may be) and the Service Payments will be increased or decreased to compensate for any increase or decrease (as the case may be) in the net cost to Project Co of performing the Services;
- (c) subject to Section 8.7(d) with respect to Allowable Capital Expenditures and to Section 8.7(e), any compensation payable or increase or decrease in the Service Payments in respect of an Eligible Change in Law Event will be calculated on the basis that Project Co will be placed in no better or worse position than it would have been in had such Eligible Change in Law Event not occurred and taking into consideration the following (without duplication):
 - (i) any Direct Losses (calculated without netting out Insurance Receivables) resulting from the Eligible Change in Law Event;
 - (ii) any net increase or decrease in the costs of Project Co performing the Services resulting from the Eligible Change in Law Event; and
 - (iii) the Service Payments payable to Project Co,

except that:

- (iv) Avoidable Costs and applicable Insurance Proceeds and insurance proceeds which Project Co would have recovered if it had complied with the requirements of this Agreement or any policy of insurance maintained or required to be maintained under this Agreement will be deducted therefrom; and
- (v) no Indirect Losses will be taken into consideration other than as set out in Section 8.7(b) above,

and concurrent with the first payment of any compensation by the Authority under this Section 8.7(c), Project Co will assign to the Authority its rights to all applicable Insurance Receivables (whether or not Project Co has made a claim);

- (d) in the case of a Relevant Works Change in Law:
 - (i) subject to Section 8.7(c), the Service Payments will be increased or decreased to compensate for any increase or decrease (as the case may be) in the net cost to Project Co of performing the Services as a direct result of the Allowable Capital Expenditure in respect of such Relevant Works Change in Law; and
 - (ii) Project Co will be entitled to compensation from the Authority in an amount equal to the Allowable Capital Expenditure; and
- (e) in the case of an Input Tax Recoverability Change in Law:
 - (i) the Authority will pay Project Co, and Project Co will be entitled to, any Additional Irrecoverable Tax resulting from the Input Tax Recoverability Change in Law; and
 - (ii) Project Co will pay the Authority, and the Authority will be entitled to, any Additional Recoverable Tax resulting from the Input Tax Recoverability Change in Law,

but in each case only to the extent necessary to leave Project Co in no better or worse position than before the Input Tax Recoverability Change in Law, provided however that Section 8.7(c) will not apply to an Input Tax Recoverability Change in Law.

8.8 Parties' Entitlements Upon Occurrence of a Change in Law

Without limiting Section 8.4, Section 8.5 or Section 8.7:

- (a) if compliance by Project Co with a Change in Law is outside the scope of, or inconsistent with, Project Co's obligations under this Agreement, or would mean a change in Project Co's obligations under this Agreement or a change in the scope or manner of carrying out the Project, such Change in Law will be deemed to constitute a Change having effect from the time that such Change in Law takes effect, except that Project Co will not be entitled to any payment or other compensation other than as set out in Section 8.4, Section 8.5 or Section 8.7;

- (b) except as otherwise provided in this Agreement, including in Section 8.4, Section 8.5 or Section 8.7, Project Co will not be entitled to any other payment or compensation or relief in respect of any Change in Law or the consequences thereof; and
- (c) nothing in Section 8.4, Section 8.5 or Section 8.7 will be interpreted as relieving Project Co of its obligation, following any and all Changes in Law, to perform its obligations under this Agreement in compliance with all Laws.

8.9 Labour Disputes

If Project Co Has Knowledge of an actual or potential labour dispute that may affect any of the Design, the Construction or the Services, Project Co will promptly:

- (a) give notice thereof to the Authority, including all relevant information related to the dispute of which Project Co Has Knowledge; and
- (b) take all reasonable steps to mitigate the effects of such labour dispute on the performance of any of the Design, the Construction or the Services, including by applying for relief to appropriate tribunals or courts.

Project Co acknowledges that if the labour dispute involves workers of a Project Contractor or Sub-Contractor, or of anyone employed by or through them, the Authority will not be required to provide any facilities, space or assistance in the Existing Hospital, the Facility or on the Lands or the Existing Hospital Lands for the purposes of such workers or any applicable union.

8.10 Payments in Respect of Supervening Events

Payments between the parties and any adjustments to Service Payments in respect of Supervening Events will be made in accordance with Section 10 (Lump Sum Payments and Service Payment Adjustments).

8.11 Supervening Events Mitigated by Change

Nothing in this Agreement will limit the right of the Authority to perform or mitigate its obligations in respect of Supervening Events or the consequences of a Supervening Event by requiring a Change or Changes.

8.12 Delay in Notification

If the Supervening Event Notice or any required information is provided by an Applicant to the other party after the dates referred to in Section 8.2 (Procedures Upon the Occurrence of a Supervening Event), then without prejudice to any other rights or remedies of the other party under this Agreement:

- (a) the Applicant will not be entitled to any compensation, extension of time or relief from its obligations under this Agreement to the extent that the amount thereof was increased or the ability to mitigate was adversely affected as a result of such delay in providing such notice or information; and

- (b) if the period of delay is 6 months or more, the rights of the Applicant with respect to the applicable Supervening Event will be of no further force or effect.

8.13 Equivalent Project Relief

The parties acknowledge that Project Co will share with the Project Contractors, who will in turn share with Sub-Contractors, in accordance with the Project Contracts, certain benefits to Project Co derived from the rights of Project Co under, and subject to the obligations and limitations under, this Agreement including rights of Project Co under Section 8 (Supervening Events) (such rights, as qualified by such obligations and limitations, are in this Section collectively “**Project Co’s Rights**”). Accordingly:

- (a) any circumstance affecting a Project Contractor or a Sub-Contractor which, if such circumstance had affected Project Co directly would have given rise to a claim by Project Co pursuant to Project Co’s Rights will, for the purpose of this Agreement, be deemed to be a circumstance affecting Project Co in respect of which Project Co may claim under and subject to Project Co’s Rights; and
- (b) amounts claimed by the Project Contractor or Sub-Contractor against Project Co in respect of any circumstance referred to in Section 8.13(a) above may be claimed by Project Co against the Authority under and subject to Project Co’s Rights, but whether or not the Authority is liable for such amounts will be determined under this Agreement as if the circumstance had affected Project Co directly,

provided that:

- (c) all such claims will be made and administered by Project Co and no Project Contractor or Sub-Contractor will have any rights against the Authority, including under this Section 8.13;
- (d) in no event will the liability of the Authority under this Section 8.13 be greater than it would have been if Project Co had been directly affected by the circumstance referred to in Section 8.13(a) above; and
- (e) in no event will the Authority be liable under this Section 8.13 for any Direct Losses or other compensation that the Authority would not have been liable for if Project Co had been directly affected by the circumstance referred to in Section 8.13(a) above.

9. INDEMNITIES AND LIMITS ON LIABILITIES AND REMEDIES

9.1 Project Co’s Obligation to Indemnify

Project Co will indemnify and keep the Authority indemnified at all times from and against all Direct Losses that the Authority and each Authority Indemnified Person may sustain in connection with:

- (a) a failure by Project Co to achieve Service Commencement by the Target Service Commencement Date, which Direct Losses shall include but not be limited to any additional out-of-pocket costs which the Authority or any Authority Indemnified Person reasonably incurs because the Authority or the Authority Indemnified Person relied on the

Project Agreement
Stanton Territorial Hospital Project Agreement – Execution Version

relevant move-in schedule and which are in excess of the costs which the Authority or the Authority Indemnified Person would have incurred had Project Co achieved the dates set out in the relevant Facility Move-in Schedule;

- (b) any loss of or physical damage to property or assets of the Authority or any Authority Indemnified Person, or any claim made by one or more third parties (including for loss of or physical damage to property or assets), or any claim for, or in respect of, the death, personal injury, disease or illness of any Person, including any Authority Indemnified Person, arising by reason of any:
 - (i) negligent act or omission of Project Co;
 - (ii) wilful misconduct of Project Co; or
 - (iii) non-compliance by Project Co with any of the provisions of this Agreement or any document, instrument or agreement delivered to the Authority as required under this Agreement;
- (c) breach of any representation or warranty by Project Co under this Agreement;
- (d) any Project Co Hazardous Substances;
- (e) breach by Project Co of, or non-compliance by Project Co with, Permits or Laws;
- (f) a failure by Project Co to obtain and maintain all necessary Permits for which it is responsible for obtaining or maintaining in accordance with this Agreement; or
- (g) any infringement or misappropriation of Intellectual Property rights of any Person by Project Co,

except to the extent caused, or contributed to, by non-compliance by the Authority with any provision of this Agreement or any document, instrument or agreement delivered to Project Co as required under this Agreement or any negligent act or omission, or any wilful misconduct, of the Authority or any Authority Person. For greater certainty, Section 4.4 applies to this Section 9.1, and this Section 9.1 may not be relied upon by the Authority Indemnified Persons for the purpose of enforcing a contractual indemnity claim directly by any of them against Project Co.

9.2 Conduct of Third Person Claims

This Section 9.2 will apply to the conduct of claims made by a third Person against a party having or claiming to have with respect to such third Person claim, the benefit of an indemnity or a right to compensation under this Agreement. The party having, or claiming to have, the benefit of the indemnity or right to compensation is referred to as the “**Beneficiary**” and the party from whom the indemnity or compensation is sought is referred to as the “**Indemnifier**”. Accordingly, subject to the requirements of any insurer who may have an obligation to provide an indemnity in respect of any liability arising under this Agreement:

- (a) if the Beneficiary receives any notice, demand, letter or other document concerning any claim for which it appears that the Beneficiary is, or may become entitled to, indemnification or compensation under this Agreement in respect of the entire claim, the Beneficiary will give notice in writing to the Indemnifier as soon as reasonably practicable and in any event within 10 Business Days of receipt thereof;
- (b) the Indemnifier will be entitled to dispute the claim in the name of the Beneficiary at the Indemnifier's own expense and take conduct of any defence, dispute, compromise, or appeal of the claim and of any incidental negotiations. The Beneficiary will give the Indemnifier all reasonable co-operation, access and assistance for the purposes of considering and resisting such claim;
- (c) in defending any claim described in Section 9.2(b) in which there is a conflict of interest between the Indemnifier and the Beneficiary, the Beneficiary may appoint independent legal counsel in respect of such claim and, if it is determined that the Beneficiary is entitled to indemnification by or compensation from the Indemnifier, all reasonable costs and expenses incurred by the Beneficiary in so doing will be included in the indemnity or compensation from the Indemnifier;
- (d) with respect to any claim conducted by the Indemnifier pursuant to Section 9.2(b) the indemnifier will:
 - (i) keep the Beneficiary fully informed and consult with it about material elements of the conduct of the claim;
 - (ii) demonstrate to the Beneficiary, at the reasonable request of the Beneficiary, that the Indemnifier has sufficient means to pay all costs and expenses that it may incur by reason of conducting the claim; and
 - (iii) not pay or settle such claims without the consent of the Beneficiary, such consent not to be unreasonably withheld or delayed;
- (e) the Beneficiary may take conduct of any defence, dispute, compromise or appeal of the claim and of any incidental negotiations if:
 - (i) the Indemnifier is not entitled to take conduct of the claim in accordance with Section 9.2(b); or
 - (ii) the Indemnifier fails to notify the Beneficiary of its intention to take conduct of the relevant claim within 10 Business Days of the notice from the Beneficiary under Section 9.2(a) or notifies the Beneficiary that it does not intend to take conduct of the claim; or
 - (iii) the Indemnifier fails to comply in any material respect with Section 9.2(d) above.

In the case of (3) above the Beneficiary may pay or settle any claim on such terms as it thinks fit (provided such settlement is in monetary terms only) and without prejudice to its

rights and remedies under this Agreement. Otherwise the Beneficiary will not pay or settle such claims without the consent of the Indemnifier, such consent not to be unreasonably withheld or delayed;

- (f) the Beneficiary may at any time give notice to the Indemnifier that it is retaining or taking over, as the case may be, the conduct of any defence, dispute, compromise, settlement or appeal of any claim, or of any incidental negotiations, to which Section 9.2(b) above applies. On receipt of such notice the Indemnifier will promptly take all steps necessary to transfer the conduct of such claim to the Beneficiary, and will provide to the Beneficiary all reasonable co-operation, access and assistance for the purposes of considering and resisting such claim. If the Beneficiary gives any notice pursuant to this Section 9.2(f) (for the sake of clarity, for reasons other than as provided in Sections 9.2(e)(ii) or 9.2(e)(iii)), then the Indemnifier will be released from any liability under its indemnity under Section 9.1 or its obligation to provide compensation, as the case may be; and
- (g) in response to any claim of infringement or misappropriation or alleged infringement or misappropriation of the Intellectual Property rights of any Person, Project Co may modify or replace such infringing or allegedly infringing item provided that:
 - (i) the modification or replacement is performed without additional cost to the Authority;
 - (ii) the modification or replacement has at least equal quality performance capabilities when used in conjunction with the Facility; and
 - (iii) the replacement of an infringing or alleged infringing item pursuant to this Section 9.2(g) will not be a breach of any provision of this Agreement that requires the license for the item to be perpetual and irrevocable.

9.3 General Obligation to Pursue Third Person Recovery

If a party (the “**Paying Party**”) has paid to the other party (the “**Receiving Party**”) an amount in respect of any indemnity, Supervening Event or other liability hereunder (a “**Liability Payment**”), and the Receiving Party has a *bona fide* claim for recovery of any such Liability Payment from a third Person or under any insurance required pursuant to this Agreement, the Receiving Party will:

- (a) as directed by the Paying Party either:
 - (i) promptly make all reasonable efforts to pursue and recover such claim and provide evidence of such efforts to the Paying Party; or
 - (ii) assign to the Paying Party the right to pursue and recover such claim and, at the Paying Party’s cost, provide reasonable cooperation in connection with the pursuit and recovery of such claim; and
- (b) if it subsequently recovers, or the Paying Party makes recovery on its behalf, (whether by payment, discount, credit, saving, relief or other benefit or otherwise) an amount which is

directly referable to the fact, matter, event or circumstances giving rise to the payment of the Liability Payment, forthwith repay to the Paying Party an amount equal to the lesser of:

- (i) an amount equal to the sum recovered (or of the value of the recovery whether by discount, credit, saving, relief or otherwise) less any out of pocket costs and expenses properly incurred by the Receiving Party in recovering such sum; and
- (ii) the Liability Payment,

provided that the Paying Party will be repaid only to the extent that the amount of such recovery plus the Liability Payment exceeds the total loss or liability of the Receiving Party in respect of the fact, matter or circumstance giving rise to the Liability Payment.

For greater certainty, the above reference to a “third Person” will not include, in the case where the Authority is the Paying Party, Project Co and Project Co Persons and their respective employees, directors, officers and agents and will not include, in the case where Project Co is the Paying Party, the Authority and the Authority Indemnified Persons.

9.4 Waiver of Remedies

No failure to exercise, and no delay in exercising, any right or remedy under this Agreement will be deemed to be a waiver of that right or remedy. No waiver of any breach of any provision of this Agreement will be deemed to be a waiver of any subsequent breach of that provision or of any similar provision.

9.5 Remedies Cumulative

Subject to Sections 9.6, 9.7 and 9.8:

- (a) the rights and remedies of the parties under this Agreement are cumulative and are in addition to and not in substitution for any other rights and remedies available at law or in equity or otherwise;
- (b) a party will not be prevented from enforcing a right or remedy on the basis that another right or remedy hereunder deals with the same or similar subject matter; and
- (c) no single or partial exercise by a party of any right or remedy precludes or otherwise affects the exercise of any other right or remedy to which that party may be entitled.

9.6 Limitation on Authority’s Remedies

The Authority’s remedies in respect of any failure by Project Co:

- (a) to achieve Service Commencement by the Target Service Commencement Date or the Longstop Date will be limited to the Authority’s rights pursuant to Section 12.4 (Authority Termination Right); and

- (b) to perform the Services in accordance with this Agreement will be limited to Deductions in accordance with Schedule 8 [Payments],

provided that nothing in this Section 9.6 will limit the Authority's right to:

- (c) claim, on or after a termination of this Agreement, costs, losses, damages and expenses suffered or incurred by the Authority as a result of rectifying or mitigating the effects of any breach of this Agreement by Project Co except to the extent recovered by the Authority under this Agreement or taken into account to reduce any compensation payable by the Authority pursuant to Schedule 9 [Compensation on Termination];
- (d) make a claim for indemnification pursuant to Section 9.1;
- (e) deliver to Project Co a Dispute Notice or a notice of default or termination pursuant to Section 12 and pursue all remedies in respect thereof; or
- (f) pursue any other express remedy available to the Authority under this Agreement or any equitable remedy, including injunctive relief and specific performance.

9.7 Limitation on Project Co's Remedies

To the extent Project Co has claimed for relief or compensation for a Supervening Event pursuant to Section 8, Project Co may not make any further claim against the Authority for costs, losses, damages or expenses incurred by Project Co, or for any other relief, in respect of any such events provided that nothing in this Section 9.7 will limit Project Co's right to:

- (a) deliver to the Authority a Dispute Notice or a notice of default or termination pursuant to Section 13 (Authority Events of Default) and pursue all remedies in respect thereof; or
- (b) pursue any other express remedy available to Project Co under this Agreement or any equitable remedy, including injunctive relief and specific performance.

9.8 Limits on Monetary Compensation

Every right to claim compensation or indemnification or reimbursement under this Agreement will be construed so that recovery is without duplication to any other amount recoverable under this Agreement. Neither party will be entitled to make any claim against the other party for compensation, indemnification or reimbursement other than as provided under this Agreement.

9.9 No Liability for Indirect Losses

Unless specifically allowed in this Agreement, neither party to this Agreement will be liable to the other party, whether in contract or in tort or on any other basis whatsoever, for any Indirect Losses suffered or incurred by that other party.

9.10 Authority's Right of Set Off

The Authority may set off any amounts owing by Project Co to the Authority under this Agreement against payments due by the Authority to Project Co under this Agreement provided that in respect of Termination Payments payable under Sections 2 or 5 of Schedule 9 [Compensation on Termination] such set off will be only to the extent that after any such amount has been set off, such Termination Payment made would be an amount not less than the Senior Debt Termination Amount.

9.11 Project Co's Right of Set Off

Project Co may set off any amounts owing by the Authority to Project Co under this Agreement against any payments due by Project Co to the Authority under this Agreement.

9.12 Undisputed Amounts and Interest on Disputed Amounts

A party will pay any undisputed portion of any disputed amount payable to the other party in accordance with this Agreement, but any disputed portion or amount will not be payable until the Dispute is resolved in accordance with the Dispute Resolution Procedure.

If payment of any amount payable under this Agreement is delayed while the matter is in Dispute, upon resolution of the Dispute, interest will be payable on any amount determined payable pursuant to the Dispute Resolution Procedure and will be calculated at the Prime Rate compounded monthly from the time such amount became payable under this Agreement until paid.

9.13 Interest on Overdue Amounts

If payment of any amount payable under this Agreement is not made when due (including Termination Payments payable pursuant to Schedule 9 [Compensation on Termination]), interest will be payable on such amount at the Default Rate and will be calculated from the date due under this Agreement until paid, compounded monthly. The party to whom payment is owed and overdue will notify the other party at least monthly of the overdue amount and the accrued interest on that amount.

9.14 Maximum Liability

- (a) Subject to Section 9.14(b), the maximum aggregate liability of each Party in respect of all claims under Section 9 shall not exceed [REDACTED] (Index Linked). This limit shall be exclusive of any insurance proceeds received or which will be received pursuant to policies maintained in accordance with the insurance requirements set out in Schedule 5 [Insurance Requirements]. This limit shall not apply in cases of willful misconduct or deliberate acts of wrongdoing.
- (b) Project Co's maximum aggregate liability in respect of all claims under Section 9.1(a) shall not exceed [REDACTED] (Index Linked). This limit shall be exclusive of any insurance proceeds received or which will be received pursuant to policies maintained in accordance with the insurance requirements set out in Schedule 5 [Insurance Requirements]. This limit shall not apply in cases of willful misconduct or deliberate acts of wrongdoing.

- (c) Nothing in this Section 9.14 shall restrict, limit, prejudice or in any other way impair the rights and/or remedies of the Parties under any other provision of this Project Agreement.

10. LUMP SUM PAYMENTS AND SERVICE PAYMENT ADJUSTMENTS

10.1 Lump Sum Payments

To the extent a party:

- (a) is entitled to payment from the other party under this Agreement, including in respect of a Change under Section 7 (Changes, Minor Works and Innovation Proposals), a Supervening Event under Section 8 (Supervening Events) or an indemnification claim under Section 9 (Indemnities and Limits on Liabilities and Remedies); or
- (b) is entitled to share in a benefit and to receive payment from the other party under this Agreement, including in respect of a Refinancing Gain under Section 5 (Financing of the Project), Innovation Proposal under Section 7 (Changes, Minor Works and Innovation Proposals) or Eligible Change in Law Event under Section 8 (Supervening Events),

the affected or entitled party may make written demand for such payments from time to time after being entitled to payment and (i) in respect of any Direct Losses, after such Direct Losses have been incurred, and (ii) in respect of any shared benefit, after receipt by the other party of the shared benefit, and payment will be made in accordance with this Section 10.

If the Authority is obligated to compensate, reimburse or otherwise pay Project Co, the Authority may in its discretion make such payment by lump sum payment or by payments that reasonably match the cash outlays of Project Co.

If Project Co is obligated to compensate, reimburse or otherwise pay the Authority, the Authority may in its discretion, require Project Co to make such payment:

- (c) by a lump sum payment, up to a maximum lump sum payment of [REDACTED] (Index Linked) without the consent of Project Co, and any greater amount with the consent of Project Co, acting reasonably; or
- (d) by payments that reasonably match the cash inflows to Project Co or the averted cash outlays.

Lump sum payments and payments that reasonably match cash inflows, cash outlays or averted cash outlays will be due and payable within 30 calendar days of delivery of written demand supported by all relevant information.

The parties may agree to any other basis for payment.

10.2 Financing of Lump Sum Payment Amounts

If the Authority is obligated to compensate, reimburse or otherwise pay Project Co and exercises its discretion to do so by a lump sum payment in accordance with Section 10.1 (Lump Sum Payments), at

the Authority's request Project Co will use all reasonable efforts to obtain the financing required to make such payment on the best terms reasonably available and, to the extent that Project Co is able to obtain such financing, there will be a corresponding increase made to the Service Payments in accordance with Section 10.3 (Adjustments to Service Payments). The Authority will:

- (a) pay to Project Co within 30 calendar days of receipt of the relevant invoice an amount equal to the reasonable out-of-pocket expenses incurred by Project Co in seeking such financing provided that the Authority approved such expenses prior to Project Co incurring them; and
- (b) provide concurrent interim financing of any expenditures and costs to be incurred by Project Co until the earlier of the date on which such financing is obtained or payment is made pursuant to Section 10.1 (Lump Sum Payments).

The Authority acknowledges that the Senior Lenders have no obligation to provide the financing referred to in this Section 10.2 or to subordinate or share their security.

10.3 Adjustments to Service Payments

Subject to the Authority's discretion for the basis of payment under Section 10.1 (Lump Sum Payments) or the parties' agreement to another basis for payment under Section 10.1 (Lump Sum Payments), if either party gives notice to the other party that it wishes the parties to consider whether an entitlement to payment under this Agreement is more efficiently effected by adjustments (both increases and decreases) to Service Payments, or if this Agreement requires that an entitlement be effected by such adjustments:

- (a) within 10 Business Days after such notice or after the determination that Service Payments are required to be adjusted, Project Co will give notice to the Authority of the proposed adjustments to be made to the Service Payments to achieve the objectives and outputs set out in Section 10.3(b). Such proposed adjustments will be ascertained by entering the relevant cost adjustments and losses into the Financial Model with effect from the relevant date determined in accordance with Section 10.3(c);
- (b) the adjustments to the calculation of the Service Payments will be determined so that upon comparing the output of the Financial Model as at the adjustment date (after updating the Financial Model to reflect actual performance to date) before and after the proposed adjustments to Service Payments, and taking into account the impact of such adjustments on the economics of the Project as reflected in the Financial Model, the timing of liability for taxation and the time when the adjustments to the Service Payments will take effect, such comparison of the output from such Financial Model shows that:
 - (i) the Equity IRR in respect of equity subscribed in and Junior Debt advanced to Project Co in accordance with the Financial Model prior to the Service Payment adjustment will be unchanged except to the extent required to reflect:
 - (A) any material change in the risk profile of the Project arising in connection with the circumstance giving rise to the adjustment; or

- (B) any benefit to the parties including in connection with a Refinancing Gain or Innovation Proposal; and
- (ii) Project Co would not, by reason of the effect of the occurrence of the adjustment or the consequential change in cash flow during the Term as shown in the Financial Model (as adjusted), be placed, in respect of any of the Senior Financing Agreements, in a position worse than it would have been in if the change had not occurred;
- (c) the relevant date for adjustments to the Service Payments is the start of the next relevant Payment Period;
- (d) if within 10 Business Days after Project Co gives notice of the proposed adjustments the parties agree that the entitlement to payment should be effected by adjustments to the Service Payments, or if this Agreement requires that the entitlement be effected by such adjustments, the parties will implement such adjustments and update the Financial Model accordingly; and
- (e) if completion or implementation of the adjustments is delayed beyond the scheduled date for completion or implementation by reference to which the Financial Model has been re-run in accordance with this Section 10.3 other than delay resulting from an audit under Section 10.4, the date of adjustment to the Service Payments payable by the Authority will be delayed by a period equal to the delay in the completion or implementation of the required adjustments.

10.4 Audit of Financial Model

Prior to implementing any adjustments to the Service Payments contemplated in Section 10.3, the Authority may, at its own expense, review and audit the revised Financial Model prepared by Project Co and Project Co will provide such information as is reasonably required by the Authority to conduct such audit.

11. AUTHORITY'S STEP-IN RIGHTS

11.1 Authority's Step-in Rights

If:

- (a) the Authority reasonably considers that a breach by Project Co of any obligation under this Agreement or an Event:
 - (i) is likely to create an immediate and serious threat to the health or safety of any Facility User, any property, or the environment;
 - (ii) is likely to compromise
 - (A) the reputation or integrity of the Authority;

- (B) the Facility, so as to affect public confidence in the Facility or any operations related to the Facility; or
 - (C) the nature of the healthcare system in the Northwest Territories, so as to affect public confidence in that system; or
- (iii) is prejudicial to the ability to carry on Authority Activities and/or the Intended Uses to a material degree; or
- (b) Project Co accumulates Deductions of:
- (i) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the General Management Services,
 - (ii) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Help Desk Services;
 - (iii) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Plant Services;
 - (iv) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Housekeeping and Waste Management Services;
 - (v) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Utility Management Services;
 - (vi) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Roads, Grounds and Landscape Maintenance Services;
 - (vii) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Parking Management Services;
 - (viii) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Environmental Sustainability Services;
 - (ix) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Pest Control Services;
 - (x) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Security and Surveillance Services;

- (xi) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Laundry and Linen Services; or
- (xii) ██████ (Index Linked) or more in any month or ██████ (Index Linked) or more in any six consecutive month period, in relation to the Catering Services,

then the Authority, acting reasonably may either:

- (c) if it considers that there is sufficient time and that it is likely that Project Co will be willing and able to provide assistance, require Project Co by notice to take such steps as are necessary or expedient to mitigate or rectify such state of affairs including, if applicable due to breach of any Project Contract or Sub-Contract, suspension of the Project Contractor or Sub-Contractor, and Project Co will use all reasonable efforts to comply with the Authority's requirements as soon as reasonably practicable; or
- (d) if it considers there is not sufficient time, or that Project Co is not likely to be willing and able to take the necessary steps, take such steps as it considers are appropriate (either itself or by engaging others) to mitigate or rectify such state of affairs and to ensure performance of the relevant Services to the standards required by this Agreement (or as close as possible to those standards as the circumstances permit). The Authority will carry out such steps as quickly as is practicable, and in such manner as will minimize interference with Project Co's performance of its obligations under this Agreement.

Project Co will ensure that the provisions contained in all applicable Sub-Contracts will not prevent or inhibit the Authority from exercising its rights under this Section 11.

11.2 Authority's Rectification Rights

If the Authority gives notice to Project Co under Section 11.1(c) and Project Co either:

- (a) does not confirm, within 5 Business Days of such notice, or such shorter period as is appropriate in the case of an emergency, that it is willing to take such steps as are required in such notice or present an alternative plan to the Authority to mitigate, rectify and protect against such circumstances that the Authority may, within a further 5 Business Days, accept or reject, acting reasonably; or
- (b) fails to take the steps as are referred to or required in such notice or accepted alternate plan within such time as set out in such notice or accepted alternate plan or within such time as the Authority, acting reasonably, will stipulate,

then the Authority may take such steps as it considers necessary or expedient to mitigate, rectify or protect against such circumstances either itself or by engaging others to take any such steps. Such steps may include the partial or total suspension of the right and obligation of Project Co to provide the relevant Services, but only for so long as the circumstances referred to in Section 11.1(a) subsist. If the circumstances referred to in Section 11.1(a) no longer subsist or Project Co has proposed a plan acceptable to the Authority, acting reasonably, for mitigating, rectifying and protecting against the

circumstances that caused the Deductions thresholds set out in Section 11.1(b) to have been reached, any suspension of the right and obligation of Project Co to provide any Services will cease and such right and obligation will once again be in full force and effect.

11.3 Notice of Facility Change

The Authority will notify Project Co of any Facility Change which the Authority intends to make pursuant to the exercise of the Authority's rights under Section 11.1(d) or Section 11.2 and provide Project Co a reasonable opportunity, taking into account all the circumstances, to comment on the proposed Facility Change. In making such Facility Change, the Authority will reasonably consider comments received in a timely manner from Project Co on the proposed Facility Change.

11.4 No Effect on Project Co's Design and Construction Responsibility

The exercise by the Authority of any of its rights under this Section 11 will not reduce or affect in any way Project Co's responsibility under Section 4.1 of Schedule 2 [Design and Construction Protocols].

11.5 Allocation of Costs for Authority Actions

To the extent that any of the circumstances set out in Section 11.1 arise as a result of any breach by Project Co of its obligations under this Agreement, then Project Co will pay the Authority the amount of all direct costs and expenses reasonably incurred by the Authority in exercising its rights under Section 11.1 or Section 11.2 and an additional mark-up of [REDACTED] of such costs and expenses in respect of indirect costs and overhead not otherwise directly attributable to the exercise of such rights. In all other cases, any actions of the Authority under Sections 11.1 and 11.2 will constitute a Compensation Event.

12. PROJECT CO EVENTS OF DEFAULT

12.1 Project Co Events of Default

For the purposes of this Agreement, "**Project Co Event of Default**" means any of the following events or circumstances:

- (a) the occurrence of a Project Co Material Breach that is not remedied in accordance with Section 12.3 including in accordance with the program for remediation under that Section, or the occurrence of a Project Co Material Breach for which a program for remediation has not been produced by Project Co in accordance with Section 12.3;
- (b) the occurrence of a Project Co Insolvency Event;
- (c) Project Co abandons the Project, other than pursuant to its right to suspend performance under Section 13.3 (Project Co's Options) or due to a Supervening Event;
- (d) Service Commencement does not occur on or before the Longstop Date;
- (e) at any time after the date that is 12 months prior to the Target Service Commencement Date it is finally determined pursuant to the Dispute Resolution Procedure that Service Commencement is not reasonably expected to occur on or before the Longstop Date;

- (f) Project Co breaches Section 16.1 or a Change in Control occurs which is prohibited by Section 16.2;
- (g) at any time after the Service Commencement Date, Project Co breaches its obligations under this Agreement (other than as a consequence of a breach by the Authority of its obligations under this Agreement) which results in a criminal conviction that is of concern to the Authority, acting reasonably, due to a potential negative impact on the Project, the reputation and/or potential liability of the Authority and/or the Stanton Territorial Health Authority, and/or the security of the Lands or the Existing Hospital Lands (a “**Criminal Conviction**”) or a conviction under the *Safety Act* (Northwest Territories) or the *Workers’ Compensation Act* (Northwest Territories) against Project Co or any Project Co Person or the Authority (an “**H&S Conviction**”) except that:
 - (i) a Criminal Conviction or an H&S Conviction, as applicable, of Project Co, a Project Co Person or the Authority will not constitute a Project Co Event of Default if, within 60 Business Days from the date of the Criminal Conviction or the H&S Conviction, as applicable (whether or not the Criminal Conviction or the H&S Conviction, as applicable, is subject to an appeal or any further judicial process), the involvement in the Project of each relevant Project Co Person is terminated or Project Co takes such other action against each such Project Co Person as is acceptable to the Authority acting reasonably; and
 - (ii) in determining whether to exercise any right of termination for a Project Co Event of Default pursuant to this Section 12.1(g), the Authority will:
 - (A) act in a reasonable and proportionate manner having regard to such matters as the gravity of the offence and the identity of the person committing the act leading to the Criminal Conviction or the H&S Conviction, as applicable; and
 - (B) give all due consideration, where appropriate, to action other than termination of this Agreement;
- (h) Project Co accumulates Deductions of ██████████ (Index Linked) or more in any 12 consecutive month period following the Service Commencement Date;
- (i) Project Co makes a representation or warranty herein that is false or misleading when made, and that
 - (i) has or will have at any time a material adverse effect on the performance of the Project or the Services;
 - (ii) is likely to compromise the reputation or integrity of the Authority; or
 - (iii) is likely to compromise the nature of the healthcare system in the Northwest Territories, so as to affect public confidence in that system; and,

in the case of a false or misleading representation or warranty that is capable of being remedied or the effects of which are capable of being remedied, Project Co has not remedied such breach and/or its effects, as applicable, within 10 Business Days following notice from the Authority; or

- (j) if such consent is required under Section 5.3 (Consent Required for Refinancing), Project Co carries out a Refinancing without the Authority's consent,

unless caused by non-compliance by the Authority with any provision of this Agreement or any document, instrument or agreement delivered to Project Co as required under this Agreement or any negligent act or omission, or any wilful misconduct, of the Authority or any Authority Person.

12.2 Notification

Project Co will notify the Authority of the occurrence, and details, of any Project Co Event of Default and of any event or circumstance which is likely, with the passage of time or otherwise, to constitute or give rise to a Project Co Event of Default, in either case promptly when Project Co Has Knowledge of its occurrence.

12.3 Project Co Material Breach Cure and Remedial Program

After the occurrence of a Project Co Material Breach and while it is subsisting, the Authority may serve a notice on Project Co specifying in reasonable detail the type and nature of the Project Co Material Breach and:

- (a) Project Co will remedy such Project Co Material Breach referred to in such notice (if it is continuing) within 20 Business Days of such notice; or
- (b) if either the Authority (as set out in its notice) or Project Co reasonably considers that a Project Co Material Breach cannot reasonably be remedied within 20 Business Days of such notice, Project Co will deliver to the Authority within 10 Business Days of such notice a reasonable program (set out, if appropriate, in stages) for remedying the Project Co Material Breach. The program will specify in reasonable detail the manner in, and the latest date by, which the Project Co Material Breach is proposed to be remedied.

If Project Co puts forward a program in accordance with Section 12.3(b), the Authority will have 10 Business Days from receipt of the program within which to notify Project Co that the Authority, acting reasonably, does not accept the program, failing which the Authority will be deemed to have accepted the program. If the Authority notifies Project Co that it does not accept the program as being reasonable, the parties will use all reasonable efforts within the following 5 Business Days to agree to any necessary amendments to the program put forward. In the absence of an agreement within such 5 Business Days, the question of whether the program (as it may have been amended by agreement) will remedy such Project Co Material Breach in a reasonable manner and within a reasonable time period (and, if not, what would be a reasonable program) may be referred by either party for resolution in accordance with the Dispute Resolution Procedure.

12.4 Authority Termination Right

If:

- (a) a Project Co Material Breach is not remedied before the expiry of the period referred to in Section 12.3(a) and no program has been put forward by Project Co under Section 12.3(b);
- (b) Project Co puts forward a program pursuant to Section 12.3(b) which has been accepted by the Authority (including after agreement under Section 12.3 to amendments to the program) or has been determined to be reasonable pursuant to the Dispute Resolution Procedure and Project Co fails to achieve any material element of the program or the end date for the program, as the case may be;
- (c) any program put forward by Project Co pursuant to Section 12.3(b) is rejected by the Authority as not being reasonable, and, if such rejection is disputed by Project Co, the Dispute Resolution Procedure does not find against that rejection; or
- (d) any Project Co Event of Default other than a Project Co Material Breach occurs,

then the Authority may (if the Project Co Event of Default continues unwaived and unremedied), subject to the terms of the Lenders' Remedies Agreement, terminate this Agreement by notice to Project Co. The right of the Authority to terminate this Agreement under this Section 12.4 is in addition, and without prejudice, to any other right which the Authority may have in connection with Project Co's defaults hereunder.

For the purposes of Section 12.4(b), if Project Co's performance of the program is adversely affected by the occurrence of a Supervening Event or a breach by the Authority of its obligations under this Agreement, then, subject to Project Co complying with the mitigation and other requirements in this Agreement concerning such events, the time for performance of the program or any relevant element of it will be deemed to be extended by a period equal to the delay caused by such events which is agreed by the parties or determined in accordance with the Dispute Resolution Procedure.

12.5 Replacement of Non-Performing Service Provider

- (a) As an alternative to termination of this Agreement pursuant to Section 12.4, if:
 - (i) the Authority has a right to terminate this Agreement due to a Project Co Event of Default that was caused, or contributed to, by the Service Provider; and
 - (ii) the actions of the Service Provider constitute a breach under the Services Contract that entitles Project Co to terminate the Service Provider,

the Authority may, acting reasonably, require Project Co to terminate the Service Provider and ensure that a replacement Service Provider is appointed to provide the Services within 40 Business Days.

- (b) If the Authority exercises its rights under this Section 12.5, Project Co shall, within 10 Business Days, put forward a proposal for the interim management or provision of the Services until such time as a replacement Service Provider can be engaged by Project Co. If:
- (i) Project Co fails to submit a proposal for the interim management or provision of the Services, or the Authority is of the opinion, acting reasonably, that Project Co's proposal is not reasonably likely to result in adequate provision of the Services; and
 - (ii) the parties cannot agree within a further 3 Business Days to a plan for the interim management or provision of the Services,
- then, without prejudice to the other rights of the Authority under this Section 12.5,
- (iii) the Authority itself may perform, or engage others (including a third party) to perform, the Services;
 - (iv) Project Co will pay the Authority the amount of all direct costs and expenses reasonably incurred by the Authority in exercising its rights pursuant to Section 12.5(b)(iii) and an additional mark-up of █████ of such costs and expenses in respect of indirect costs and overhead not otherwise directly attributable to the exercise of such rights; and
 - (v) Project Co shall not be subject to Deductions in respect of those Services that are being performed by the Authority or a third party appointed by the Authority pursuant to Section 12.5(b)(iii) to the extent and for the duration of time that Project Co is not performing those Services.

Any Dispute in respect of the interim management or provision of the Services will be determined in accordance with the Dispute Resolution Procedure.

- (c) Project Co's appointment of a replacement Service Provider pursuant to this Section 12.5 shall be subject to the following:
- (i) the Authority's prior written consent, acting reasonably, as to the suitability of the replacement; and
 - (ii) the replacement Service Provider entering into:
 - (A) a contract with Project Co upon the same or substantially similar terms as the person so replaced; and
 - (B) a Material Project Contractor Collateral Agreement with the Authority and Project Co on the same terms as the Material Project Contractor Collateral Agreement entered into by the person so replaced,

unless any material variations are approved by the Authority, acting reasonably.

- (d) If Project Co fails to terminate the Service Provider and to secure a replacement Service Provider in accordance with this Section 12.5, the Authority shall be entitled to exercise its termination rights in accordance with Section 12.4.

12.6 The Authority's Costs

Project Co will reimburse the Authority for all reasonable costs incurred by the Authority in exercising any of its rights (including any relevant increased administrative expenses and actual legal expenses) under this Section 12 (Project Co Events of Default).

13. AUTHORITY EVENTS OF DEFAULT

13.1 Authority Events of Default

For the purposes of this Agreement, "**Authority Event of Default**" means any of the following events or circumstances:

- (a) a failure by the Authority to pay any amount due and owing to Project Co under this Agreement on the due date (which amount is not being disputed in good faith) and the Authority has not remedied such failure to pay within 10 Business Days of notice from Project Co;
- (b) except as provided for in Section 13.1(a), a breach, or series of breaches, by the Authority of any term, covenant or undertaking to Project Co, or any representation or warranty made by the Authority to Project Co in this Agreement is incorrect when made, the consequence of which:
 - (i) has an adverse effect on the performance of the Design, the Construction or the Services; or
 - (ii) results in any provision of this Agreement being unenforceable against the Authority,

and as a result thereof Project Co is reasonably likely to be materially deprived of the benefit of this Agreement;

- (c) if any material part of the Facility, the portion of the Lands on which the Facility is or will be situated, or any interest in Project Co or any Partner is expropriated by any Governmental Authority and as result thereof Project Co is reasonably likely to be materially deprived of the benefit of this Agreement; or
- (d) the Authority breaches Section 16.4 (Limitations on Assignment of Project by Authority).

13.2 Notification

The Authority will notify Project Co of the occurrence, and details, of any Authority Event of Default and of any event or circumstance which is likely, with the passage of time or otherwise, to constitute or give rise

to an Authority Event of Default, in either case promptly on the Authority Having Knowledge of its occurrence.

13.3 Project Co's Options

After the occurrence of an Authority Event of Default and while an Authority Event of Default is continuing, Project Co may, at its option exercise one or more of the following, as applicable:

- (a) in respect of the Design and the Construction prior to the Service Commencement Date, suspend performance by it of its Design and Construction obligations under this Agreement (but, for clarity, not suspend performance by it of its Services obligations under this Agreement) until such time as the Authority has demonstrated to the reasonable satisfaction of Project Co that it will perform and is capable of performing its obligations under this Agreement and the Target Service Commencement Date, the Longstop Date and the dates set out in the Phasing Plan will be extended by the time such suspension is in effect;
- (b) in the case of an Authority Event of Default under Section 13.1(a), suspend performance by it of its obligations under this Agreement until the Authority has remedied such Authority Event of Default and the Target Service Commencement Date and the Longstop Date will be extended by the time such suspension is in effect and such additional time as may be reasonably required to return to normal operations following such suspension;
- (c) in the case of an Authority Event of Default under Sections 13.1(a), 13.1(b) or 13.1(c), serve notice on the Authority of the occurrence specifying details of such Authority Event of Default and if the relevant matter or circumstance has not been rectified or remedied by the Authority or otherwise within 20 Business Days of such notice (or in the case of an Authority Event of Default under Section 13.1(b) or 13.1(c) such longer period as is reasonably required for the Authority to rectify or remedy such Authority Event of Default as long as the Authority is diligently pursuing such rectification or remedy), Project Co may serve a further notice on the Authority terminating this Agreement with immediate effect; or
- (d) in the case of an Authority Event of Default under Section 13.1(d), terminate this Agreement by notice to the Authority.

13.4 Project Co's Costs

The Authority will reimburse Project Co for all reasonable costs incurred by Project Co in exercising any of its rights (including any relevant increased administrative expenses, interest expenses during Construction and actual legal and other expenses) under this Section 13 (Authority Events of Default).

14. PROCEDURE ON TERMINATION

14.1 Compensation on Termination

If this Agreement is terminated pursuant to its terms, the Authority will pay compensation to Project Co in accordance with Schedule 9 [Compensation on Termination].

14.2 Transfer to the Authority of Assets, Contracts, etc.

On or promptly after the Termination Date:

- (a) if prior to the Service Commencement Date:
 - (i) in so far as any transfer will be necessary to fully and effectively transfer property to the Authority, Project Co will transfer to, and there will vest in, the Authority (or any New Project Co as may be appointed by the Authority) free from all financial encumbrances:
 - (A) such part of the Facility as has been constructed on or has become affixed to the Lands; and
 - (B) all construction materials on-hand to be (I) affixed to the Lands or, to the extent related to the Initial Remediation Work, the Existing Hospital Lands; or (II) otherwise used in the Facility or, to the extent related to the Initial Remediation Work, the Existing Hospital; and
 - (ii) if the Authority so elects:
 - (A) the construction plant and equipment will remain available to the Authority or the New Project Co for the purposes of completing the Design and Construction; and
 - (B) all other Project related plant and all materials on or near the Lands or, , to the extent related to the Initial Remediation Work, prior to the Initial Remediation Work Completion Date, the Existing Hospital Lands will remain available to the Authority or the New Project Co for the purposes of completing the Design, the Construction, and the Initial Remediation Work,
- subject to payment by the Authority of the Design-Builder's reasonable charges, and
- (b) if the Authority so elects, Project Co will cause any or all of the Project Contracts to be novated or assigned to the Authority, provided that:
 - (i) Project Co will not be obligated to assign to the Authority any of Project Co's rights to claim against the applicable Project Contractor that arose under such Project Contract prior to the date of such novation or assignment; and

- (ii) if termination occurs under Section 13.3 (Project Co's Options) the consent of the applicable Project Contractor will be required;
- (c) Project Co will, or will cause any Material Contract Party to, offer to sell to the Authority at the Fair Market Value, free from any security interest all or any part of the stocks of material and other assets, vehicles, spare parts and other moveable property owned by Project Co or any Material Contract Party and reasonably required by the Authority in connection with the operation of the Facility or the provision of the Services;
- (d) Project Co will deliver to the Authority (to the extent not already delivered to the Authority):
 - (i) all existing designs, plans and other documents produced in connection with the Facility and in the control of Project Co;
 - (ii) one complete set of existing "as built drawings" showing all alterations made to the Facility and the Existing Hospital, if applicable; and
 - (iii) one complete set of existing up to date maintenance, operation and training manuals for the Facility,subject to reasonable generally applicable third party licensing terms;
- (e) Project Co will use all reasonable efforts to ensure that the benefit of existing Project Intellectual Property and all warranties in respect of mechanical and electrical plant and equipment used or made available by Project Co under this Agreement and included in the Facility but not previously assigned or licensed to the Authority are assigned, licensed or otherwise transferred to the Authority;
- (f) to the extent permitted by Law, Project Co will assign to the Authority (or any New Project Co as may be appointed by the Authority) all Permits;
- (g) Project Co will deliver to the Authority all records required to be kept by Project Co hereunder (Project Co having the right to retain copies thereof) unless such documents are:
 - (i) required by Law to be retained by Project Co or a Project Contractor or Sub-Contractor, in which case complete copies will be delivered to the Authority; or
 - (ii) privileged from production pending resolution of any outstanding Dispute, in which case such records will be delivered forthwith upon resolution of such Dispute, provided that any records that are necessary for the performance of the Design, the Construction or the Services will be delivered to the Authority no later than the Termination Payment Date; and
- (h) return to the Authority all Confidential Information of the Authority within the possession or control of Project Co or any Project Contractor or Sub-Contractor.

Project Co will ensure that provision is made in all applicable contracts to ensure that the Authority will be in a position to exercise its rights, and Project Co will be in a position to comply with its obligations, under this Section 14.2 without additional payment or compensation to any Person.

14.3 Transition Out Arrangements:

At the expiry of the Term, Project Co will:

- (a) on request by the Authority, for a period not to exceed 6 months after the Termination Date:
 - (i) co-operate fully with the Authority and any successor providing to the Authority services in the nature of any of the Services or any part of the Services to achieve a timely, safe, orderly, effective and efficient transition of the performance of services in the nature of the Services and to avoid or mitigate in so far as reasonably practicable any inconvenience or any risk to the health and safety of Facility Users; and
 - (ii) continue to provide the Services or any part of the Services required by the Authority and the Authority will pay to Project Co a reasonable price for such services determined with reference to Project Co's price for such Services prior to the Termination Date;
- (b) subject to Section 14.3(a), as soon as practicable following the Termination Date remove from the Lands and the Existing Hospital Lands all property of Project Co or any Project Co Person that is not acquired by the Authority pursuant to Section 14.2 (or not belonging to the Authority) and if it has not done so within 40 Business Days after any notice from the Authority requiring it to do so the Authority may (without being responsible for any loss, damage, costs or expenses) remove and sell any such property and will hold any proceeds less all costs incurred to the credit and direction of Project Co;
- (c) subject to Section 14.3(a), on the Termination Date deliver to the Authority:
 - (i) all keys, access codes and/or other devices required to operate the Facility in the control of Project Co; and
 - (ii) any Project Intellectual Property required to be delivered by Project Co pursuant to Section 14.2(e);
- (d) subject to Section 14.3(a), as soon as practicable after the Termination Date, vacate, and cause the Project Co Persons to vacate, those parts of the Existing Hospital, the Facility, the Lands and the Existing Hospital Lands over which Project Co has control and occupation and will leave such parts of the Lands, the Existing Hospital Lands, the Existing Hospital and the Facility in a safe, clean and orderly condition; and
- (e) comply with all requirements of Schedule 20 [Handback Requirements].

14.4 Project Co to Cooperate

If the Authority wishes to conduct a competition prior to the Expiry Date with a view to entering into an agreement for the provision of services (which may or may not be the same as, or similar to, the Services or any of them) following the expiry of this Agreement, Project Co will prior to the Expiry Date co-operate with the Authority fully in such competition process including by:

- (a) providing any information in Project Co's control or possession which the Authority may reasonably require to conduct such competition except that information which is commercially sensitive to Project Co or a Project Co Person (and, for such purpose commercially sensitive means information which would if disclosed to a competitor of Project Co or a Project Co Person give that competitor a competitive advantage over Project Co or the Project Co Person and thereby prejudice the business of Project Co or the Project Co Person); and
- (b) assisting the Authority by providing any participants in such competition process with access to the Lands and the Facility provided such access does not affect the Services in a way that results in any reduction in Service Payments and does not affect the Initial Remediation Work.

Project Co will be entitled to reimbursement for all reasonable out of pocket expenses and internal costs incurred in connection with the foregoing services.

14.5 Project Co Material

In connection with all information, records, documents, data and other materials delivered by Project Co to the Authority as required pursuant to this Section 14 (collectively, the "**Project Co Materials**"), Project Co shall deliver to the Authority a certificate of an officer of Project Co addressed to the Authority in form and substance satisfactory to the Authority, certifying, among other things:

- (a) all Project Co Materials delivered to the Authority are true, accurate and complete copies of the originals of all such Project Co Materials;
- (b) with respect to Project Co Materials that constitute agreements, understandings, indentures, contracts, leases, deeds of trust, licences, options, instruments or other commitments between Project Co and any persons:
 - (i) all are in good standing and in full force and effect with no amendments and Project Co is entitled to all rights and benefits thereunder; and
 - (ii) Project Co has complied with all terms thereof, has paid all amounts due thereunder, has not waived any rights thereunder and no default or breach exists in respect thereof on the part of any of the parties thereto and no event has occurred which, after the giving of notice or the lapse of time or both, would constitute such a default or breach; and

- (c) other than Project Co Materials there no other material agreements, understandings, indentures, contracts, leases, deeds of trust, licences, options, instruments or other commitments relating to the Project.

14.6 Continued Performance

Subject to Project Co's rights of suspension under Sections 13.3(a) and 13.3(b) (Project Co's Options) and subject to the provisions of this Section 14, the parties will continue to perform their obligations under this Agreement (including the Authority continuing to make Service Payments) notwithstanding the giving of any notice of default or notice of termination.

15. DISPUTE RESOLUTION

15.1 Procedure

Except as otherwise provided in this Agreement, any Dispute will be resolved in accordance with, and the parties will comply with, the Dispute Resolution Procedure set out in Schedule 13 [Dispute Resolution Procedure].

15.2 Undisputed Amounts

A party will pay any undisputed portion of any disputed amount to the other party in accordance with this Agreement but any disputed portion or amount will not be payable until the Dispute is resolved as aforesaid.

16. ASSIGNMENT/CHANGE IN CONTROL

16.1 Limitations on Assignment of Project by Project Co

Project Co will not assign, transfer or otherwise dispose of any interest in this Agreement or a Project Contract except:

- (a) as security, substantially in a form approved by the Authority, acting reasonably, prior to its grant for any loan made to Project Co under any Senior Financing Agreement and provided the Senior Lenders enter into the Lenders' Remedies Agreement;
- (b) in connection with the exercise of rights of the Senior Lenders under the Senior Financing Agreements in accordance with the Lenders' Remedies Agreement; or
- (c) otherwise:
 - (i) prior to the day (the "**Transfer Restriction Date**") that is one year after the Service Commencement Date, with the written consent of the Authority, which may be given or withheld in the Authority's discretion, and
 - (ii) after the Transfer Restriction Date, with the written consent of the Authority, which will not be unreasonably withheld or delayed,

provided that in the case of an assignment under 16.1(b) or 16.1(c) above the assignee:

- (d) is not a Restricted Person; and
- (e) assumes all the obligations of Project Co under this Agreement.

16.2 Limitations on Change in Control

No Change in Control of Project Co will be permitted (whether by Project Co or otherwise) to occur except:

- (a) in connection with the exercise of rights of the Senior Lenders under the Senior Financing Agreements in accordance with the Lenders' Remedies Agreement, provided that such Change in Control does not result in a Restricted Person obtaining control of Project Co;
- (b) arising from any bona fide open market transaction in any shares or other securities of Project Co or of any Person having an ownership interest in Project Co effected on a recognized public stock exchange; or
- (c) otherwise:
 - (i) prior to the Transfer Restriction Date, with the written consent of the Authority, which may be given or withheld in the Authority's discretion; and
 - (ii) after the Transfer Restriction Date, with the written consent of the Authority, which will not be unreasonably withheld or delayed.

Notwithstanding any other provision of this Agreement:

- (d) Project Co will not be, nor will it become at any time, a Restricted Person; and
- (e) except as a result of a transaction referred to in Section 16.2(b) above, a Person who is a Restricted Person will not acquire any ownership interest (whether directly or indirectly) in Project Co or in any Person that has control of Project Co.

16.3 Factors Authority May Consider

In determining whether to provide its consent under Section 16.1(c) or 16.2(c), and without limiting the Authority's discretion thereunder, it will be reasonable for the Authority to refuse its consent if:

- (a) the proposed assignee or the new party in control of Project Co, as the case may be, or any of their Affiliates, is a Restricted Person;
- (b) the proposed assignee or the new party in control of Project Co, as the case may be, is, in the reasonable opinion of the Authority, not sufficiently creditworthy or having sufficient financial capacity, taking into account the nature of the obligations under this Agreement; or

- (c) the assignment or Change in Control could, in the reasonable opinion of the Authority, have a material adverse effect on the Authority or the Project.

16.4 Limitations on Assignment of Project by Authority

The Authority will not assign, transfer or otherwise dispose of any interest in this Agreement unless:

- (a) the assignment, transfer or other disposition is to a Qualified Person; and
- (b) the assignee assumes all the obligations of the Authority under this Agreement.

16.5 Costs of Request for Consent

If Project Co requests consent to an assignment, transfer or disposition pursuant to Section 16.1 or to a Change in Control pursuant to Section 16.2, Project Co will pay the Authority's reasonable internal administrative and personnel costs and all reasonable out-of-pocket costs in connection with considering any such request.

17. GENERAL

17.1 Confidentiality

- (a) Subject to Section 17.1(b), each party will hold in confidence any Confidential Information received from the other party, except that this Section 17.1 will not restrict:
 - (i) either party from disclosing or granting access to such information to its professional advisers and consultants, to the extent necessary, to enable it to perform (or to cause to be performed) or to enforce its rights or obligations under this Agreement and provided further that Project Co may, subject to obtaining confidentiality restrictions similar to those set out in this Agreement:
 - (A) provide to the Senior Lenders and other potential lenders, equity providers, underwriters, arrangers, investment dealers, monoline insurers and their respective advisors such documents and other information as are reasonably required by them in connection with raising financing for the Project or complying with the terms of the Senior Financing Agreements or related agreements; and
 - (B) provide to a Project Contractor and its advisors, or provide or cause to be provided to other third parties, Confidential Information which is necessary to enable Project Co to perform (or to cause to be performed) its obligations under this Agreement but which Confidential Information will not be used by the Project Contractor, its advisors, or other third parties, as applicable, for any other purpose; and
 - (ii) the Authority from disclosing or granting access to such information to any department or ministry of GNWT or any other Governmental Authority which requires the information in relation to the Project.

- (b) Subject to any restrictions on the Confidential Information which are imposed by a third party that may own any Confidential Information, the obligation to maintain the confidentiality of the Confidential Information does not apply to Confidential Information:
 - (i) which the party that disclosed the Confidential Information confirms in writing is not required to be treated as Confidential Information;
 - (ii) which is or comes into the public domain otherwise than through any disclosure prohibited by this Agreement;
 - (iii) to the extent any Person is required to disclose such Confidential Information by Law, including without limitation, a disclosure required under the *Access to Information and Protection of Privacy Act* (Northwest Territories);
 - (iv) to the extent consistent with any Authority's policy concerning the Authority's Confidential Information, the details of which have been provided to Project Co in writing prior to the disclosure; or
 - (v) that the Authority may be entitled to receive from Project Co pursuant to this Agreement for the operation, maintenance or improvement of the Facility in the event of, or following, termination of this Agreement.
- (c) Without prejudice to any other rights and remedies that the other party may have, each of the parties agrees that damages may not be an adequate remedy for a breach of Section 17.1(a) and that the other party will, in such case, be entitled to the remedies of injunction, specific performance or other equitable relief for any threatened or actual breach of Section 17.1(a).
- (d) Project Co will be fully liable for any breach of confidentiality under this Section 17.1 by any Person to whom Project Co has disclosed or granted access to Confidential Information under this Section 17.1 to the same extent as if Project Co itself breached confidentiality under this Section 17.1.

17.2 Personal Information

Project Co will, and will require Project Contractors and Sub-Contractors to, only collect, hold, process, use, store and disclose Personal Information:

- (a) with the prior consent of the Authority;
- (b) to the extent necessary to perform Project Co's obligations under this Agreement and in circumstances where the Authority itself could collect, hold, process, use, store and disclose Personal Information if the Authority itself performed the Services; and
- (c) in accordance with applicable Laws, including the *Access to Information and Protection of Privacy Act* (Northwest Territories) as if the provisions of such Laws applied directly to Project Co, the Project Contracts and Sub-Contractors.

Project Co will allow the Authority on reasonable notice to inspect the measures of Project Co and its Project Contractors and Sub-Contractors to protect Personal Information.

The Authority may from time to time provide guidance to Project Co on the requirements of this Section 17.2, including the circumstances set out in Section 17.2(b). For greater certainty, the provisions of this Section 17.2 that refer to the *Access to Information and Protection of Privacy Act* (Northwest Territories) will apply to the Design-Builder, Service Provider and their respective Sub-Contractors only to the extent necessary to fulfill the Authority's obligations under the *Access to Information and Protection of Privacy Act* (Northwest Territories).

17.3 Public Communications

Unless expressly provided in this Agreement or otherwise required by any Law (but only to that extent), neither party will make or permit to be made any public announcement or disclosure whether for publication in the press, radio, television or any other medium of any Confidential Information or any matters relating thereto, without the written consent of the other party (which will not be unreasonably withheld or delayed). The parties will comply with Schedule 16 [Communication Roles].

17.4 Law of Agreement

This Agreement will be deemed to be made pursuant to the laws of the Northwest Territories and the laws of Canada applicable therein and will be governed by and construed in accordance with such laws.

17.5 Attornment

For the purposes of any legal actions or proceedings brought by any party hereto against the other party, the parties hereby irrevocably submit to the exclusive jurisdiction of the courts of the Northwest Territories and acknowledge their competence and the convenience and propriety of the venue and agree to be bound by any judgment thereof and not to seek, and hereby waive, review of its merits by the courts of any other jurisdiction.

17.6 Entire Agreement, Waivers and Consents in Writing

This Agreement and the instruments and documents to be executed and delivered pursuant to it constitute the entire agreement between the parties, expressly superseding all prior agreements and communications (both oral and written) between any of the parties hereto with respect to all matters contained herein or therein, and except as stated herein or the instruments and documents to be executed and delivered pursuant hereto, contains all the representations and warranties of the respective parties. In addition:

- (a) no waiver of any provision of this Agreement; and
- (b) no consent required pursuant to the terms of this Agreement,

is binding or effective unless it is in writing and signed by the party providing such waiver or consent.

17.7 Notices

Any notice or communication required or permitted to be given under this Agreement will be in writing and will be considered to have been sufficiently given if delivered by hand or transmitted by electronic transmission to the address or electronic mail address of each party set out below:

if to the Authority:

The Government of the Northwest Territories
5th Floor Arthur Laing Building
5003-49th Street, P.O. Box 1320
Yellowknife, NT X1A 2L9

[Redacted] [Redacted]

with copy to:

[REDACTED]

or to such other address or electronic mail address as any party may, from time to time, designate in the manner set out above. Any such notice or communication will be considered to have been received:

- (a) if delivered by hand during business hours (and in any event, at or before 3:00 pm local time in the place of receipt) on a Business Day, upon receipt by a responsible representative of the receiver, and if not delivered during business hours, upon the commencement of business hours on the next Business Day; and
- (b) if delivered by electronic mail during business hours (and in any event, at or before 3:00 pm local time in the place of receipt) on a Business Day, upon receipt, and if not delivered during business hours, upon the commencement of business hours on the next Business Day provided that:
 - (i) the receiving party has, by electronic mail or by hand delivery, acknowledged to the notifying party that it has received such notice; or
 - (ii) within 24 hours after sending the notice, the notifying party has also delivered a copy of such notice to the receiving party by hand delivery.

17.8 Further Assurances

The parties will do, execute and deliver, or will cause to be done, executed and delivered, all such further acts, documents (including certificates, declarations, affidavits, reports and opinions) and things as the other may reasonably request for the purpose of giving effect to this Agreement or for the purpose of establishing compliance with the representations, warranties and obligations of this Agreement.

17.9 Counterparts

This Agreement may be executed in any number of counterparts, each of which will be deemed to be an original, and this has the same effect as if the signatures on the counterparts were on a single copy of this Agreement so that it will not be necessary in making proof of this Agreement to produce or account for more than one such counterpart.

17.10 No Partnership, etc.

Nothing contained in this Agreement nor any action taken pursuant hereto or thereto will be deemed to constitute the Authority and Project Co a partnership, joint venture or any other similar such entity.

17.11 Survival

Notwithstanding any other provision of this Agreement, the provisions of Section 6.16 (Third Party Liability Insurance as an Uninsurable Risk), Section 8 (Supervening Events) (if and to the extent a Compensation Event relates to a claim made by a third party against Project Co after the Termination Date), Section 9 (Indemnities and Limits on Liabilities and Remedies), Section 14 (Procedure on Termination), Section 15

(Dispute Resolution), Section 17.1 (Confidentiality), Section 17.2 (Personal Information), Schedule 9 [Compensation on Termination], Schedule 13 [Dispute Resolution Procedure] and Schedule 20 [Handback Requirements] will survive the expiry or any earlier termination of this Agreement.

IN WITNESS WHEREOF the parties hereto have executed this Agreement as of the day and year first above written.

SCHEDULE 1

DEFINITIONS AND INTERPRETATION

1. DEFINITIONS

In this Agreement:

“Account Trustee” has the meaning set out in Appendix 5B [Insurance Trust Agreement];

“Additional Irrecoverable Tax” means GST incurred by Project Co in respect of the supply of any good or service to the Authority which is consumed, used or supplied, or to be consumed, used or supplied, exclusively by Project Co in the course of carrying out the Design or Construction or performing the Services to the extent that Project Co is unable to recover or be credited with input tax credits, refunds, rebates or exemptions for such GST that Project Co would have recovered or been credited with prior to the applicable Change in Law;

“Additional Recoverable Tax” means GST incurred by Project Co in respect of the supply of any good or service to the Authority which is consumed, used or supplied, or to be consumed, used or supplied, exclusively by Project Co in the course of carrying out the Design or Construction or performing the Services to the extent that Project Co is able to recover or be credited with input tax credits, refunds, rebates or exemptions for such GST that Project Co would not have recovered or been credited with prior to the applicable Change in Law;

“Adjusted Estimated Market Value” has the meaning set out in Schedule 9 [Compensation on Termination];

“Adjusted Highest Compliant Bid Price” has the meaning set out in Schedule 9 [Compensation on Termination];

“Affiliate” in respect of a Person means any other Person that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, such first Person where **“control”** means, with respect to the relationship between or among two or more Persons, the possession, directly or indirectly or as trustee, personal representative or executor, of the power to direct or cause the direction of the affairs or management of a Person, whether through the ownership of voting securities, as trustee, personal representative or executor, by statute, contract, credit arrangement or otherwise, including the ownership, directly or indirectly, of securities having the power to elect a majority of the board of directors or similar body governing the affairs of such Person;

“Affiliated Person” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Agent” has the meaning set out in Appendix 5B [Insurance Trust Agreement];

“Agreement” means this agreement including any recitals, schedules and appendices to this agreement, as amended, supplemented or restated from time to time;

“Allowable Capital Expenditure” means the Capital Expenditure incurred by Project Co as a direct consequence of a Relevant Works Change in Law;

“**Annual Energy Target**” has the meaning set out in Appendix 2C [Energy];

“**Annual Service Plan**” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“**Applicant**” has the meaning set out in Section 8.1 (Supervening Events);

“**Architect**” means Kasian Architecture, which has been engaged by the Design-Builder to undertake the Design;

“**Authority**” means the Government of the Northwest Territories;

“**Authority Activities**” means any activities carried on or to be carried on by the Authority, or other Persons permitted by the Authority, in the Facility from and after the Service Commencement Date, related to the provision of Clinical Services and non-clinical services;

“**Authority Event of Default**” has the meaning set out in Section 13.1 (Authority Events of Default);

“**Authority FM Services**” means all services and activities, other than Clinical Services, provided or performed at the Existing Hospital and/or the Facility by the Authority from time to time;

“**Authority Indemnified Person**” means:

- (a) any contractor or subcontractor (of any tier) of the Authority engaged in connection with the Project;
- (b) any representative, agent or advisor (including legal and financial advisors) of the Authority, engaged in connection with the Project, or of any Person referred to in (a) above, in each case acting in such capacity; and
- (c) any director, officer or employee of the Authority or of any Person referred to in (a) or (b) above, in each case acting in such capacity;

“**Authority Person**” means:

- (a) any director, officer, employee or agent of the Authority;
- (b) any representative, advisor (including any legal and financial advisor), contractor or subcontractor (of any tier) of the Authority (including a contractor or subcontractor pursuant to a contract or subcontract relating to a project other than the Project) in any such Person’s capacity as a provider of services directly or indirectly to the Authority in connection with the Project, other than Project Co, Project Contractors or Sub-Contractors;
- (c) any invitee of the Authority or any of the Authority Persons referred to in (a) or (b) above who enters upon the Lands or, during the Existing Hospital Works Period, the Existing Hospital Lands; or

- (d) any lessee or tenant of the Authority at the Facility or, during the Existing Hospital Works Period, the Existing Hospital;

“Authority Policies” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Authority Supplied End-Use Equipment” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Availability Condition” has the meaning set out in Schedule 8 [Payments];

“Average Unit Cost” has the meaning set out in Appendix 2C [Energy];

“Avoidable Costs”, when used in relation to an event or circumstance, means all costs and expenditures which:

- (a) are saved or avoided as a result of the event or circumstance or its effects; or
- (b) if Project Co acted reasonably and in accordance with this Agreement (including Section 2.5), would have been saved or avoided as a result of the event or circumstance or its effects;

“Base Case Project IRR” means [REDACTED] being the Nominal internal rate of return for the Project calculated on an after tax basis at the level of Project Co in accordance with the Financial Model as shown in Cell O19 of the Outputs worksheet;

“Base Date” means April 1, 2015;

“Benchmark Price Range” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Benchmarking Exercise” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Benchmarking Proposal” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Beneficiary” has the meaning set out in Section 9.2 (Conduct of Third Person Claims);

“Biomedical Waste” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“BMS” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Building Systems” have the meaning set out in Appendix 4C [Plant Services];

“Buildings” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Business Day” means a day other than a Saturday, Sunday or statutory holiday in the Northwest Territories;

“Capital Expenditure” means an expenditure related to the Project which is treated as a capital expenditure in accordance with GAAP;

“**Catering Services**” means the services described in Appendix 4L [Catering Services];

“**Certificate of Service Commencement**” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“**Change**” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“**Change Certificate**” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“**Change Directive**” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“**Change in Control**” means with respect to a Person:

- (a) any direct or indirect change in the ownership or control of any legal, beneficial or equitable interest in any or all of the shares, units or equity in the Person (including the control over the exercise of voting rights conferred on equity share capital, unit interests or equity interests or the control over the right to appoint or remove directors, a general partner or other managers), including changes arising from assignment or transfer of existing shares, units or equity, issuance of new shares, units or equity or amalgamation, merger consolidation, amendment of a partnership agreement, amendment of a limited partnership certificate or other reorganization; or
- (b) any other direct or indirect change,

which results in a Person or group of Persons, other than the equity holders of the entity immediately prior to the change, directly or indirectly:

- (c) controlling the composition of the majority of the board of directors of the entity or of a general partner or manager of the entity;
- (d) controlling the decisions made by or on behalf of the Person, including by controlling the voting power of the board of directors or by controlling the voting power of any class of shareholders or equity holders of any of the entity, a general partner of the entity or a manager of the entity or otherwise;
- (e) holding equity (either beneficially or otherwise) of that entity with a subscribed value (taking into account contributions to be made in the case of a limited partnership) of more than one half of the subscribed value (taking into account contributions to be made in the case of a limited partnership) or equity (either beneficially or otherwise) of that entity with more than one half of the voting rights; or
- (f) having the ability to direct or cause the direction of the management, actions or policies of the entity;

“**Change in Law**” means the coming into effect in Canada after the Financial Submission Date of:

- (a) any new Law; or
- (b) any modification (including repeal) of any Law existing on such date,

which is binding on Project Co or the Authority, but excluding in each such case:

- (c) any lawful requirements of any Governmental Authority (unless resulting from a Change in Law);
- (d) any change in the interpretation of any legislation other than a judgment of a relevant court which changes binding precedent in the Northwest Territories;
- (e) any new Law or modification arising from or in any way connected to or having substantially the same effect as any Law which as of the Financial Submission Date:
 - (i) had been introduced as a Bill in the Legislative Assembly of the Northwest Territories or the Parliament of Canada or in a draft statutory instrument published or issued by a Governmental Authority; or
 - (ii) had been published in the Canada Gazette or in a draft bill as part of a Governmental Authority discussion or consultation paper;

“Change Mark-Up” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Change Report” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Change Report Costs” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Charge” has the meaning set out in Schedule 7 [Lands];

“City” means the City of Yellowknife;

“Cleaned Elements” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Cleaning Access Times” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Cleaning Outcome Standards” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Cleaning Services” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Clinical Services” means the direct and/or indirect provision of medical and healthcare services at the Existing Hospital and/or the Facility to or for the benefit of persons requesting or requiring such services;

“Clinical Specifications” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“CMMS” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Commission”, **“Commissioning”** and **“Commissioned”** have the meanings set out in Appendix 2D [Equipment and Furniture], and are defined solely for purposes of the Equipment;

“Commissioning Plan” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Compensation Event” means any of the following events or circumstances if and to the extent that it interferes adversely with, or causes a failure of, the carrying out of the Design, the Construction, the Initial Remediation Work or the Services, causes an Unavailability Event or causes Direct Losses to Project Co or any Project Co Person:

- (a) breach by the Authority of any of its obligations under this Agreement;
- (b) breach of any representation or warranty by the Authority under this Agreement;
- (c) misconduct of the Authority, an Authority Person or a Facility User;
- (d) a negligent act or omission of the Authority, an Authority Person or a Facility User;
- (e) the existence of Undisclosed Environmental Liabilities;
- (f) a Permit which is the obligation of the Authority to obtain or maintain is declared invalid or defective by a court of competent jurisdiction;
- (g) the existence as of the Effective Date of any encumbrance enforceable against or affecting the Lands, the Existing Hospital Lands or the Existing Hospital other than the Encumbrances;
- (h) the discovery of any human remains, relics or other articles or structures of historical, antiquarian or archaeological interest on or adjacent to the Lands;
- (i) a claim asserting infringement of aboriginal rights (including duty to consult) or aboriginal treaty rights or aboriginal title by any first nation(s);
- (j) a Protest Action;
- (k) lawful or unlawful strike, lockout, work-to-rule or other dispute by Public Sector Employees or by the employees of any contractor (other than Project Co) engaged by the Authority to provide services in the Facility or, prior to the Initial Remediation Work Completion Date, the Existing Hospital;

- (l) the actions referred to in Section 11.5 (Allocation of Costs for Authority Actions) as constituting a Compensation Event;
- (m) the event referred to in Section 8.4 (Project Co's Entitlements Upon Occurrence of a Relief Event);
- (n) the event referred to in Section 8.6 (Parties' Entitlements Upon Occurrence of a Force Majeure Event);
- (o) the event referred to in Section 6.15(a) and 6.15(c) of Schedule 2 [Design and Construction Protocols];
- (p) Project Co's compliance with a direction from the Authority under Section 3.3 of Schedule 13 [Dispute Resolution Procedure] when the matter in dispute is subsequently resolved, or settled, in Project Co's favour;
- (q) the execution of works, other than usual or reasonably expected works, on the Lands or the Existing Hospital Lands or in respect of the Facility or the Existing Hospital and not forming part of this Agreement, by the Authority or any person permitted to execute such works by the Authority or any Authority Person;
- (r) the outbreak or effects of any Medical Contamination if and to the extent such Medical Contamination affects more than 15% of the floor space in the Facility;
- (s) if part of the Facility or part of the portion of the Lands on which the Facility is or will be situated or any interest of Project Co or any Partner is expropriated by any Governmental Authority and such expropriation is not an Authority Event of Default as set out in Section 13.1; or
- (t) any other event which is expressly stated in this Agreement to constitute a Compensation Event,

except to the extent that any of such events arise or are contributed to, directly or indirectly, as a result of any wilful misconduct, negligent act or omission or non-compliance with the terms of this Agreement by Project Co or any Project Co Person;

"Compliant Bid" has the meaning set out in Schedule 9 [Compensation on Termination];

"Confidential Information" means Personal Information, and information of a party that the party has designated as confidential at the time of disclosure and which is supplied, or to which access is granted, to or on behalf of the other party (whether before or after the Effective Date), either in writing, or in any other form, directly or indirectly pursuant to discussions with the other party and includes all analyses, compilations, studies and other documents whether prepared by or on behalf of a party which contain or otherwise reflect or are derived from such designated information;

"Confidential Waste" has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Construction” means everything (other than Design) required to achieve Service Commencement, including the construction of the Facility, temporary works and the supply of all labour and materials, construction equipment, management, supervision and support of any kind or nature whatsoever required for the construction of the Facility, the Facility Move and the supply, installation, testing and commissioning of all Equipment;

“Construction Lands” means the enclosed active area (or areas) of Construction or Initial Remediation Work, as applicable, on the Lands or the Existing Hospital Lands, as identified by Project Co and agreed in advance by the Authority;

“Construction Payment” has the meaning set out in Appendix 8B [Construction Payments];

“Construction Period” means the period commencing on the Effective Date and ending on the Service Commencement Date;

“Construction Period Joint Committee” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Contingency Plans” has the meaning set out in Appendix 4A [General Management Services];

“Contingent Funding Liabilities” means direct or indirect liabilities or contingent liabilities, if any, of the Partners in respect of financial obligations owed to Project Co, to the General Partner, to any party under the Junior Debt or the Senior Lenders under the Senior Financing Agreements, such as, for example, the amount a Partner has agreed to contribute to Project Co, promissory notes, obligations to fund reserve accounts, guarantees, letters of credit in respect of deferred equity, subordinated debt or equity bridge loans;

“Contract Year” means each of:

- (a) the period from the Effective Date to the next March 31;
- (b) each subsequent period of 12 calendar months commencing on April 1; and
- (c) the period from the April 1 immediately prior to the Termination Date to and including the Termination Date;

“Cooling Degree Days” has the meaning set out in Appendix 2C [Energy];

“Core User Group” has the meaning set out in Appendix 2B [User Consultation and Design Review];

“Cost to Complete” as at a date means in respect of the Design and Construction, the total remaining costs to be incurred by Project Co and paid to the Design-BUILDER under the Design-Build Agreement for Design and Construction to be performed by the Design Builder to achieve Service Commencement;

“Cost to Date” has the meaning set out in Appendix 8B [Construction Payments];

“Criminal Conviction” has the meaning set out in Section 12.1 (Project Co Events of Default);

“Critical Care Area” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Cumulative Allowable Capital Expenditure” means the cumulative amount of all the Allowable Capital Expenditures from time to time during the Term;

“Debt” of any Person at any date means, without duplication:

- (a) all obligations of such Person for borrowed money;
- (b) all obligations of such person evidenced by bonds, debentures, notes or other similar instruments;
- (c) all obligations of such person to pay the deferred purchase price of property or services, except trade accounts payable arising in the ordinary course of business;
- (d) all obligations of such person under leases which are or should be, in accordance with GAAP, recorded as capital leases in respect of which such person is liable, except leases arising in the ordinary course of business;
- (e) all obligations of such Person to purchase securities (or other property) which arise out of or in connection with the sale of the same or substantially similar securities (or property);
- (f) all deferred obligations of such Person to reimburse any bank or other Person in respect of amounts paid or advanced under a letter of credit or other similar instrument;
- (g) all Debt (as otherwise defined in this definition) of others secured by a Charge on any asset of such Person, provided such Debt (as otherwise defined in this definition) is assumed by such Person; and
- (h) all Debt (as otherwise defined in this definition) of others guaranteed directly or indirectly by such Person or as to which such Person has an obligation substantially the economic equivalent of a guarantee;

“Deduction” has the meaning set out in Schedule 8 [Payments];

“Deemed Corporate Project Co” has the meaning set out in Schedule 9 [Compensation on Termination];

“Default Rate” on any day means ■■■ per annum over the Prime Rate;

“Defect” means any defect or fault, including omission, in the Facility which occurs due to a failure by Project Co to comply with the Design and Construction obligations under this Agreement;

“Deficiency” or **“Deficiencies”** has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Deficiency Deadline” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Deliver”, “Delivery” and “Delivered” have the meanings set out in Appendix 2D [Equipment and Furniture];

“Demand Maintenance” has the meaning set out in Appendix 4C [Plant Services];

“Demand Requisition” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Demolition Plan” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Design” means everything required for the design of the Facility except for any design that is expressly excluded from Project Co’s responsibility under this Agreement;

“Design and Construction Energy Target” has the meaning set out in Appendix 2C [Energy];

“Design and Construction Protocols” means the provisions of Schedule 2 [Design and Construction Protocols];

“Design and Construction Representative” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Design and Construction Specifications” mean the provisions of Schedule 3 [Design and Construction Specifications];

“Design Professionals” means the Architect, the Architect’s subconsultants and the design consultants engaged directly by the Design-Builder or Project Co, including engineers and technical experts, who provide services with respect to the Design;

“Design-Build Agreement” means the design and construction agreement between Project Co and the Design-Builder, a certified copy of which has been delivered by Project Co to the Authority, as amended, supplemented or replaced from time to time in accordance with this Agreement;

“Design-Builder” means Bird-Clark Stanton JV, an unincorporated joint venture of Bird Design-Build Construction Inc. and Clark Builders, or any assignee or replacement permitted under this Agreement;

“Direct Losses” means in respect of a condition, event or omission, without duplication, all damages, losses, liabilities, penalties, fines, assessments, claims (including by third parties), actions, costs (including increased Capital Expenditures), expenses (including the reasonable cost of legal or professional services), proceedings, demands and charges, whether arising under statute, contract or at common law, which result directly from such condition, event or omission:

- (a) net of related Insurance Proceeds and Insurance Receivables and any amount which the relevant party would have recovered (in respect of such condition, event or omission) if it had complied with the requirements of this Agreement or any policy of insurance maintained or required to be maintained under this Agreement;
- (b) excluding any Indirect Losses, except to the extent included in a third party claim; and
- (c) in the case of Project Co, without limiting the foregoing:

- (i) including the full amount of the related loss or reduction of any Service Payments; and
- (ii) net of Avoidable Costs related to such condition, event or omission,

and in calculating any amount of any additional Capital Expenditure, labour or similar cost claimed by Project Co under this definition of “Direct Losses”, Project Co will be entitled to add to such amounts the mark-ups referred to in Section 2.10 of Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Disclosed Data” means any information, data and documents made available or issued to Project Co or any Project Contractor or Sub-Contractor in connection with the Project by or on behalf of the Authority, including the Geotechnical Reports, the Environmental Report, the Hazardous Materials Report and any information relating to the Lands or the requirements of any Governmental Authority, whether before or after the execution of this Agreement;

“Discriminatory Change in Tax Law” means a Change in Law which results in the imposition of Taxes or a change in Taxes which specifically apply to discriminate against:

- (a) the Project or health care-related projects procured and contracted on a public-private partnership basis similar to the Project;
- (b) Project Co and its Partners or Persons that have contracted on similar health care-related projects procured and contracted with the Authority or other statutory or public body on a public-private partnership basis similar to the Project;
- (c) the design, provision, operation or maintenance of hospitals or health care facilities and not to other types of facilities; or
- (d) Persons holding shares or other evidences of ownership in Persons whose principal business is contracting on other similar health care-related projects procured and contracted on a public-private partnership basis similar to the Project and not other Persons;

“Dispute” means any disagreement, failure to agree or other dispute between the Authority and Project Co arising out of or in connection with this Agreement, including in respect of the interpretation, breach, performance, validity or termination of this Agreement, whether in the law of contract or any other area of law;

“Dispute Notice” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“Dispute Resolution Procedure” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“Distribution” means, without duplication or double counting:

- (a) whether in cash or in kind, any:

- (i) distribution to Partners or other distribution in respect of equity interests in Project Co;
 - (ii) redemption or purchase of any equity interest in Project Co or reduction of partnership capital or the amount of a Partner's contribution stated in the limited partnership certificate or any other reorganization or variation to partnership capital;
 - (iii) payment in respect of Junior Debt (whether of fees, principal, interest including capitalized interest and interest on overdue interest, breakage costs, or otherwise and whether or not such items are included or excluded from the definition of Junior Debt);
 - (iv) payment, loan, contractual arrangement, including any management agreement or payment in respect thereof, or transfer of assets or rights, in each case to the extent made or entered into after the Effective Date and not in the ordinary course of business or not on commercially reasonable terms including to any current or former Partner, or any current or former Affiliate of any current or former Partner;
 - (v) conferral of any other benefit which is not conferred and received in the ordinary course of business or is not conferred or received on commercially reasonable terms, including to any current or former Partner, any current or former Affiliate of any current or former Partner or Project Co; and
 - (vi) other payment to any current or former Partner, any current or former Affiliate of any current or former Partner or Project Co howsoever arising and whether made pursuant to the terms of an agreement or otherwise or by way of gift or in respect of any equity interest in Project Co or other securities of or interests in Project Co if, in any such case, such payment would not have been made were it not for the occurrence of any Refinancing or Change in Control; or
- (b) the early release of any reserves or any Contingent Funding Liabilities, the amount of such release being deemed to be a gain for the purposes of any calculation of Refinancing Gain,

and where any such Distribution is not in cash, the equivalent cash value of such Distribution will be calculated. A Distribution will be calculated in a manner that is consistent with the calculation of the Threshold Equity IRR in the Financial Model;

"Down Time" has the meaning set out in Appendix 4C [Plant Services];

"Draft Proposal" has the meaning set out in Appendix 4N [Market Testing Procedure];

"Draft Reinstatement Plan" has the meaning set out in Section 6.4 (Project Co's Obligations – Material Damage or Destruction);

“**Effective Date**” means the date of this Agreement;

“**Elevator Availability**” has the meaning set out in Appendix 4C [FM Services];

“**Eligible Change in Law Event**” means the occurrence of a:

- (a) Relevant Change in Law;
- (b) Relevant Works Change in Law;
- (c) Discriminatory Change in Tax Law; or
- (d) Input Tax Recoverability Change in Law;

“**Employee Information**” has the meaning set out in Schedule 9 [Compensation on Termination];

“**Employee Payments**” means any liability that has been reasonably incurred by Project Co arising as a result of termination of this Agreement under collective agreements, employment agreements or under any other agreements with employees of Project Co, including severance (whether accrued or not), vacation pay and sick pay accrued but excluding any Distribution;

“**Encumbrances**” has the meaning set out in Schedule 7 [Lands];

“**End User Administration**” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“**Energy**” has the meaning set out in Appendix 2C [Energy];

“**Energy Analysis Report**” has the meaning set out in Appendix 2C [Energy];

“**Energy Consumption**” has the meaning set out in Appendix 2C [Energy];

“**Energy Gainshare**” has the meaning set out in Appendix 2C [Energy];

“**Energy Management Plan**” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“**Energy Monitoring Model**” has the meaning set out in Appendix 2C [Energy];

“**Energy Painshare**” has the meaning set out in Appendix 2C [Energy];

“**Energy Year**” has the meaning set out in Appendix 2C [Energy];

“**Enhanced Cleaning**” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“**Environmental Credit**” has the meaning set out in Appendix 2C [Energy];

“Environmental and Sustainability Services” means the services described in Appendix 4H [Environmental Sustainability Services];

“Environmental Laws” means all Laws relating to the protection of human health and all plant, animal, land, water and air resources that may be affected by the Project;

“Environmental Management Plan” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Environmental Management System” or **“EMS”** has the meaning set out in Appendix 4H [Environmental and Sustainability Services];

“Environmental Report” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Equipment” has the meaning set out in Appendix 2D [Equipment and Furniture];

“Equipment List” has the meaning set out in Appendix 2D [Equipment and Furniture];

“Equity IRR” means Project Co’s Nominal equity internal rate of return of [REDACTED] calculated on an after tax basis at the level of Project Co in accordance with the Financial Model as shown in Cell O19 of the Outputs worksheet, having regard to Distributions made and projected to be made;

“Estimated Market Value” has the meaning set out in Schedule 9 [Compensation on Termination];

“Event” has the meaning set out in Schedule 8 [Payments];

“Evidence Based Design” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Excluded Person” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Excusing Event” means any of the following events or circumstances if it occurs on or after the Service Commencement Date and interferes adversely with, or causes a failure of, the performance of the Services or causes an Unavailability Event:

- (a) Scheduled Maintenance (including Life Cycle Requirements) performed in accordance with the Annual Service Plan, except that:
 - (i) improperly performed Scheduled Maintenance and the effects thereof will not constitute an Excusing Event; and
 - (ii) if the Scheduled Maintenance continues beyond the period or duration set out in the Annual Service Plan, the Excusing Event will terminate at the end of the period or duration set out in the Annual Service Plan;
- (b) the carrying out by Project Co of Minor Works required by the Authority in accordance with this Agreement;

- (c) failure by any Utility Company, local authority or other like body to perform works or provide services required to be provided by them in a reasonably timely manner or any unreasonable interference with the Services by any such body as a result of maintenance or other work;
- (d) compliance by Project Co with an order or direction by police, fire officials or any comparable public authority having the legal authority to make such order or give such direction;
- (e) a Change in Law;
- (f) the outbreak or effects of any Medical Contamination, to the extent it does not constitute a Compensation Event;
- (g) a state of public health emergency being declared by the Chief Public Health Officer of the Northwest Territories; and
- (h) any other event which is expressly stated in this Agreement to constitute an Excusing Event,

except to the extent that any of such events arise or are contributed to, directly or indirectly, as a result of any wilful misconduct, negligent act or omission or non-compliance with the terms of this Agreement by Project Co or any Project Co Person;

“Exempt Refinancing” means:

- (a) a change in taxation or change in accounting treatment pursuant to changes in Laws or GAAP or International Financial Reporting Standards;
- (b) the exercise of rights, waivers, consents and similar actions which relate to day to day administrative and supervisory matters that are solely in respect of:
 - (i) breach of representations, warranties, covenants or undertakings;
 - (ii) movement of monies between the Project Accounts (as defined in the Senior Financing Agreements) in accordance with the terms of the Senior Financing Agreements;
 - (iii) late or non-provision of information or consents;
 - (iv) amendments to Project Contracts;
 - (v) approval of revised technical and economic assumptions for financial model runs (to the extent required for forecasts under the Senior Financing Agreements);
 - (vi) restrictions imposed by the Senior Lenders on the dates at which the financing provided by the Senior Lenders under the Senior Financing Agreements can be advanced to Project Co under the Senior Financing Agreements, and which are

given as a result of any failure by Project Co to ensure that the Design and the Construction are carried out in accordance with the Project Schedule and which are notified in writing by Project Co or the Senior Lenders to the Authority prior to being given;

- (vii) changes to milestones for drawdown set out in the Senior Financing Agreements and which are given as a result of any failure by Project Co to ensure that the Design and the Construction are carried out in accordance with the Project Schedule and which are notified in writing by Project Co or the Senior Lenders to the Authority prior to being given;
 - (viii) failure by Project Co to obtain any consents from Governmental Authorities required by the Senior Financing Agreements; or
 - (ix) voting by the Senior Lenders and the voting arrangements between the Senior Lenders in respect of the levels of approval required by them under the Senior Financing Agreements;
- (c) an amendment, variation or supplement of an agreement approved by the Authority as part of any Change;
 - (d) a sale of Junior Debt or Units in Project Co by Partners or, in the case of Junior Debt, Affiliates of Partners or securitization of the existing rights or interests attaching to Junior Debt or Units in Project Co;
 - (e) a Qualifying Bank Transaction;
 - (f) a conversion of Units into Junior Debt or of Junior Debt into Units, provided that the total principal amount of all Junior Debt outstanding immediately following the conversion plus amounts paid to Project Co by way of subscription for Units outstanding immediately following the conversion does not exceed the total amounts paid to Project Co by way of subscription for Units outstanding immediately prior to the conversion plus the total principal amount of all Junior Debt outstanding immediately prior to the conversion; or
 - (g) any secondary transaction in the bond market;

“Existing Hospital” means the existing buildings, related structures, utility connections, and landscaping present on the Existing Hospital Lands prior to the Effective Date;

“Existing Hospital Lands” has the meaning set out in Schedule 7 [Lands];

“Existing Hospital Licence” has the meaning set out in Schedule 7 [Lands];

“Existing Hospital Obligations” has the meaning set out in Section 4.1A (Existing Hospital Obligations) of the Agreement;

“Existing Hospital Security” means a letter or letters of credit, or other form of security acceptable to the Authority, in the aggregate amount of [REDACTED] ([REDACTED]) of which is to be provided on or before the

Effective Date and [REDACTED] of which is to be provided on or before the Service Commencement Date) less the agreed value of the performed Initial Remediation Work and issued by a Qualifying Institution;

“Existing Hospital Works Period” means the period commencing on the Facility Move Commencement Date and ending on the Initial Remediation Work Completion Date;

“Expiry Date” means the date that is 30 years from the original Target Service Commencement Date;

“Facility” means all buildings, related structures, utility connections, landscaping and other improvements to be constructed, renovated or altered by Project Co pursuant to this Agreement, other than in respect of the Existing Hospital, and for greater certainty includes the Support Services Building, all Life Cycle Components, all shelled space, and any Unallocated/Unassigned Space, but does not include the Existing Hospital;

“Facility Change” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Facility Move” means Project Co’s moving of equipment from the Existing Hospital to the Facility as described in Appendix 2D [Equipment and Furniture];

“Facility Move Commencement Date” means the date, as set out in the Project Schedule (as updated from time to time in accordance with Schedule 2 [Design and Construction Protocols]), on which Project Co commences the Facility Move;

“Facility Move Completion Date” means the date on which Project Co completes the Facility Move;

“Facility Operation Variances” has the meaning set out in Appendix 2C [Energy];

“Facility Users” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Fair Market Value” means the amount at which an asset or a liability would be exchanged in an arm’s length transaction between informed and willing parties, other than in a forced or liquidation sale;

“Financial Close” means the time when the Project Agreement and all financing and other agreements related to the Project have been executed and delivered and all conditions to the effectiveness of the Project Agreement and the Project financing agreements have been satisfied;

“Financial Close Target Date” means September 22, 2015;

“Financial Model” means Project Co’s financial model for the Project attached as Schedule 15 [Financial Model], a copy of which is attached to this Agreement in electronic format, as updated or amended from time to time in accordance with the terms of this Agreement;

“Financial Submission Date” means June 5, 2015;

“Five Year Maintenance Plan” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Force Majeure Event” means the occurrence after the Effective Date of:

- (a) war, civil war, armed conflict or terrorism;
- (b) nuclear, radioactive, chemical or biological contamination, except to the extent that such contamination arises or is contributed to, directly or indirectly, as a result of any wilful misconduct, negligent act or omission or non-compliance with the terms of this Agreement by Project Co or a Project Co Person;
- (c) earthquake or tidal wave;
- (d) flood, except to the extent that such flood arises or is contributed to, directly or indirectly, as a result of any wilful misconduct, negligent act or omission or non-compliance with the terms of this Agreement by Project Co or a Project Co Person; or
- (e) pressure waves caused by devices traveling at supersonic speeds,

which directly causes a party to be unable to comply with all or a material part of its obligations under this Agreement;

“Functional Area Risk Categorization” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Functional Unit” has the meaning set out in Schedule 8 [Payments];

“GAAP” means generally accepted accounting principles in effect in Canada including the accounting recommendations published in the Handbook of the Canadian Institute of Chartered Accountants;

“General Management Services” means the services described in Appendix 4A [General Management Services];

“Geotechnical Reports” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Gigajoule” or **“Gj”** has the meaning set out in Appendix 2C [Energy];

“GNWT” means the Government of the Northwest Territories;

“Good Industry Practice” means using standards, practices, methods and procedures to a good commercial standard, conforming to Law and exercising that degree of skill and care, diligence, prudence and foresight which would reasonably and ordinarily be expected from a qualified, skilled and experienced person engaged in a similar type of undertaking under the same or similar circumstances;

“Governmental Authority” means any federal, provincial, territorial, regional, municipal or local governmental authority, quasi-governmental authority, court, government or self-regulatory organization, commission, board, tribunal, organization, or any regulatory, administrative or other agency, or any political or other subdivision, department or branch of any of the foregoing, having jurisdiction in any way over or in respect of any aspect of the performance of this Agreement or the Project;

“**GST**” means the goods and services tax imposed pursuant to Section IX of the *Excise Tax Act* (Canada);

“**H & S Conviction**” has the meaning set out in Section 12.1 (Project Co Events of Default);

“**Handback Amount**” has the meaning set out in Schedule 20 [Handback Requirements];

“**Handback Certificate**” has the meaning set out in Schedule 20 [Handback Requirements];

“**Handback Holdback**” has the meaning set out in Schedule 20 [Handback Requirements];

“**Handback Requirements**” means the requirements set out in Schedule 20 [Handback Requirements];

“**Handback Survey**” has the meaning set out in Schedule 20 [Handback Requirements];

“**Handback Works**” has the meaning set out in Schedule 20 [Handback Requirements];

“**Handback Works Plan**” has the meaning set out in Schedule 20 [Handback Requirements];

“**Has Knowledge**”, “**Have Knowledge**” or “**Having Knowledge**” means:

- (a) for an individual, when information is acquired by the individual;
- (b) for a corporation, when information has come to the attention of:
 - (i) a director or officer of the corporation; or
 - (ii) a senior employee of the corporation with responsibility for matters to which the information relates,
- (c) for a partnership other than a limited partnership, when any partner Has Knowledge under the other Sections of this definition or under this Section (c) or Section (d) below for any partner that is itself a partnership or when any member of a director-level or officer-level or similar position of the partnerships or a senior employee of the partnership with responsibility for matters to which the information relates; or
- (d) for a limited partnership, when any general partner Has Knowledge under the other Sections of this definition or under this Section (d) or Section (c) above for any partner that is itself a partnership or when any member of a director-level or officer-level or similar position of the partnerships or a senior employee of the partnership with responsibility for matters to which the information relates;
- (e) for the Authority, when information has come to the attention of:
 - (i) a director or officer of the Authority;
 - (ii) a senior employee of the Authority with responsibility for matters to which the information relates, or

- (iii) the Authority's Design and Construction Representative or Operating Period Representative;

in each case under circumstances in which a reasonable person would take cognizance of it;

"Hazardous Materials Report" has the meaning set out in Schedule 2 [Design and Construction Protocols];

"Hazardous Substance" means any hazardous waste, hazardous product, contaminant, toxic substance, deleterious substance, dangerous good, pollutant, waste, reportable substance, and any other substance, in respect of which the storage, manufacture, handling, disposal, treatment, generation, use, transport, remediation or release into or presence in the environment is prohibited, controlled or regulated under Environmental Laws;

"Heating Degree Days" has the meaning set out in Appendix 2C [Energy];

"Help Desk" has the meaning set out in Schedule 4 [Services Protocols and Specifications];

"Help Desk Report" has the meaning set out in Appendix 4B [Help Desk Services];

"Help Desk Services" has the meaning set out in Appendix 4B [Help Desk Services];

"Highest Compliant Bid Price" has the meaning set out in Schedule 9 [Compensation on Termination];

"High Service Failure" has the meaning set out in Schedule 8 [Payments];

"Hospital" has the meaning set out in Schedule 2 [Design and Construction Protocols];

"Housekeeping and Waste Management Services" means the services described in Appendix 4D [Housekeeping and Waste Management Services];

"IMIT" means Information Management and Information Technology;

"Identified Future Buildings" has the meaning set out in Schedule 2 [Design and Construction Protocols];

"Income Tax" means any tax imposed on the income of a Person by any Canadian (whether federal, provincial or otherwise) Governmental Authority;

"Indemnifier" has the meaning set out in Section 9.2 (Conduct of Third Person Claims);

"Independent Certifier" has the meaning set out in Schedule 2 [Design and Construction Protocols];

"Independent Energy Consultant" has the meaning set out in Appendix 2C [Energy];

"Index Linked", with respect to an amount at any time, means that the amount is adjusted as at each April 1st commencing as of the April 1st following the Effective Date by:

- (a) multiplying it by the Inflation Index as at the immediately preceding April; and
- (b) dividing it by the Inflation Index as at the Base Date;

“Indicative Design” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Indirect Losses” means any loss of revenue, loss of profits, loss of use, loss of contract, loss of goodwill, loss of production, loss of business, loss of business opportunity or any exemplary, punitive or special damages or any consequential or indirect loss or damages of any nature claimed, suffered or allegedly suffered by:

- (a) Project Co or any Project Co Person (other than a Person who is a Project Co Person solely by virtue of being an invitee of Project Co or any Project Co Person); or
- (b) the Authority or any Authority Person (other than a Person who is an Authority Person solely by virtue of being an invitee of the Authority or any of Authority Persons) or an Authority Indemnified Person,

and shall be deemed not to include any loss of Service Payments or other amounts expressly payable by the Authority to Project Co under this Agreement;

“Inflation Index” means the Consumer Price Index, as published by the Bank of Canada or, if such index in its present form becomes unavailable, such similar index as may be agreed by the parties, acting reasonably or failing agreement as determined by the Dispute Resolution Procedure;

“Infrastructure” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Initiating Party” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“Initial Remediation Work” means the removal of hazardous substances from the Existing Facility as required by Appendix 3F of Schedule 3 [Design and Construction Specifications];

“Initial Remediation Work Completion Date” means the date when the Independent Certifier, in accordance with the principles of Schedule 2 [Design and Construction Protocols], has certified that the Initial Remediation Work has been substantially performed for the purposes of the *Mechanics Lien Act* (Northwest Territories);

“Initial Remediation Work Period” means the period commencing on the Facility Move Completion Date and ending on the Initial Remediation Work Completion Date;

“Innovation Proposal” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Input Tax Recoverability Change in Law” means a Change in Law, other than a Discriminatory Change in Tax Law, which results in Additional Irrecoverable Tax or Additional Recoverable Tax;

“Insurance Trust Account” has the meaning set out in Schedule 10 [Lenders’ Remedies Agreement];

“Insurance Adjustment” has the meaning set out in Schedule 5 [Insurance Requirements];

“Insurance Proceeds” means the amount of any insurance proceeds received by a Person in respect of a claim made under any policy of insurance required to be maintained under this Agreement other than:

- (a) any policy of insurance maintained by the Authority solely for the benefit of the Authority;
- (b) for the purposes of Sections 6.7, 6.10 and 6.11, insurance proceeds received by Project Co or the Senior Lenders from:
 - (i) the delay in start-up insurance described in Schedule 5 [Insurance Requirements]; or
 - (ii) the business interruption insurance described in Schedule 5 [Insurance Requirements];

“Insurance Receivables” means the amount of any insurance proceeds which a Person is entitled to receive pursuant to policies of insurance required to be maintained under this Agreement other than:

- (a) any policy of insurance maintained by the Authority solely for the benefit of the Authority;
- (b) for the purposes of Sections 6.7, 6.10 and 6.11, insurance proceeds received by Project Co or the Senior Lenders from:
 - (i) the delay in start-up insurance described in Schedule 5 [Insurance Requirements]; or
 - (ii) the business interruption insurance described in Schedule 5 [Insurance Requirements];

“Insurance Review Date” has the meaning set out in Schedule 5 [Insurance Requirements];

“Insurance Trust Agreement” means the agreement between the Authority, the Agent, Project Co and the Account Trustee in the form set out in Appendix 5B [Insurance Trust Agreement], as amended, supplemented or replaced from time to time;

“Intellectual Property” means any or all of the following and all rights, arising out of or associated therewith:

- (a) national, international and foreign patents, utility models, mask works, and applications therefor and all reissues, divisions, renewals, extensions, provisionals, continuations and continuations-in-part thereof;
- (b) inventions (whether patentable or not), invention disclosures, improvements, trade secrets, proprietary information, know-how, technology, technical data and customer lists, product formulations and specifications, and all documentation relating to any of the foregoing throughout the world;

- (c) copyrights, copyright registrations and applications therefor, and all other rights corresponding thereto throughout the world;
- (d) industrial designs and any registrations and applications therefor throughout the world;
- (e) rights in any internet uniform resource locators (URLs), domain names, trade names, logos, slogans, designs, common law trade-marks and service marks, trade-mark and service mark registrations and applications therefor throughout the world;
- (f) data bases and data collections and all rights therein throughout the world;
- (g) moral and economic rights of authors and inventors, however denominated, throughout the world; and
- (h) any similar or equivalent rights to any of the foregoing anywhere in the world;

“Intended Uses” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Interface” has the meaning set out in Schedule 3 [Design and Construction Protocols];

“Joint Technical Review” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Junior Debt” means indebtedness issued by Project Co to any of its Partners or Affiliates of Partners which ranks subordinate in all respects to the Senior Debt, excluding:

- (a) all amounts not actually paid to Project Co by cash advance, rights entitling Project Co to a cash advance, or other consideration;
- (b) all fees, including commitment fees, standby fees or other fees, paid or to be paid by Project Co, other than to any Partner or any Affiliate of a Partner; and
- (c) capitalized interest, and interest on overdue interest;

“Key Individuals” has the meaning set out in Section 2.8 (Key Individuals);

“Lands” has the meaning set out in Schedule 7 [Lands];

“Laundry and Linen Services” means the services described in Appendix 4K [Laundry and Linen Services];

“Laws” means all laws (including the common law), statutes, regulations, treaties, judgments and decrees and all official directives, by-laws, rules, consents, approvals, authorizations, guidelines, codes of practice, orders and policies of any Governmental Authority having the force of law from time to time, including, for greater certainty, those related to the issuance of Permits, occupational health and safety, and any building codes;

“LEAN” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Lenders’ Remedies Agreement” means the agreement between the Authority, the Senior Lenders and Project Co in the form set out in Schedule 10 [Lenders’ Remedies Agreement], as amended, supplemented or replaced from time to time in accordance with this Agreement;

“Liability Payment” has the meaning set out in Section 9.3 (General Obligation to Pursue Third Person Recovery);

“Licence” has the meaning set out in Schedule 7 [Lands];

“Life Cycle Component” means each component of plant, equipment or other items to be supplied, installed, constructed and commissioned as part of the Facility, as described in the Life Cycle Report, but, for greater certainty, does not include improvements, furniture and equipment installed by a tenant of the Facility;

“Life Cycle Plan” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Life Cycle Report” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Life Cycle Requirements” means the replacement and refurbishment of all Life Cycle Components by Project Co as contemplated in this Agreement;

“Linked Unit” has the meaning set out in Schedule 8 [Payments];

“Liquid Market” has the meaning set out in Schedule 9 [Compensation on Termination];

“Longstop Date” means the date that is 12 months after the Target Service Commencement Date, as adjusted in accordance with this Agreement;

“Long Stop Return Date” has the meaning set out in Schedule 8 [Payments];

“Low Service Failure” has the meaning set out in Schedule 8 [Payments];

“Maintained Elements” has the meaning set out in Appendix 4C [Plant Services];

“Maintained Equipment” has the meaning set out in Appendix 4C [Plant Services];

“Maintenance” has the meaning set out in Appendix 4C [Plant Services];

“Maintenance Access Times” has the meaning set out in Appendix 4C [Plant Services];

“Maintenance Services” has the meaning set out in Appendix 4C [Plant Services];

“Market Tested Services” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Market Testing” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Market Testing Dates” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Market Testing Meetings” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Market Testing Proposal” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Master Site Plan” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Material Contract Party” means a party to a Material Contract, other than Project Co;

“Material Contracts” means:

- (a) the Project Contracts; and
- (b) any agreement for products, services or management to Project Co between Project Co and a current or former Affiliate of Project Co or a current or former Partner of Project Co;

“Material Project Contractor Collateral Agreement” means the agreement to be entered into between the Authority, a Material Contract Party and Project Co in the form set out in Schedule 11 [Material Project Contractor Collateral Agreement], as amended, supplemented or replaced from time to time in accordance with this Agreement;

“Materials” has the meaning set out in Appendix 4K [Laundry and Linen];

“MDR” means medical device reprocessing;

“Medium Service Failure” has the meaning set out in Schedule 8 [Payments];

“Medical Contamination” means a disease carrying agent which cleaning and prevention of infection or contamination techniques in use in accordance with Good Industry Practice and this Agreement cannot substantially prevent or cannot substantially remove with the result that:

- (a) it is unsafe to admit patients or staff to the relevant area or to use the area for the purpose for which it is intended; and
- (b) the area cannot be made safe for the admission of patients or staff;

“Minor Works” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Minor Works Rates” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Miscellaneous Maintenance” has the meaning set out in Appendix 4C [Plant Services];

“Miscellaneous Occupant Services” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Miscellaneous Occupant Services Payment” has the meaning set out in Schedule 8 [Payments];

“Monitoring Period” has the meaning set out in Appendix 2C [Energy];

“Net Change Value” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Net Present Value” means the aggregate of the discounted values, calculated as of the estimated date of the Refinancing, of each of the relevant projected Distributions, in each case discounted using the Threshold Equity IRR;

“New Project Agreement” means an agreement on substantially the same terms and conditions as this Agreement (including any agreements entered into pursuant to this Agreement as at the Termination Date) but with the following amendments:

- (a) if this Agreement is terminated prior to the Service Commencement Date, the extension of the Target Service Commencement Date and the Longstop Date by such reasonable period as is agreed by the Authority and the New Project Co to meet such extended Target Service Commencement Date and Longstop Date;
- (b) any accrued Deductions pursuant to Schedule 8 [Payments] will be cancelled;
- (c) the term of such agreement will be equal in length to the term from the Termination Date until the date on which the Operating Period would otherwise have expired;
- (d) the Authority may not terminate such agreement for reasons which arose prior to the Termination Date so long as the New Project Co is using all reasonable efforts to remedy any breach of this Agreement that arose prior to the Termination Date and which is capable of being remedied; and
- (e) any other amendments as may be specified by the Authority that do not adversely affect any compensation which would otherwise be payable to Project Co pursuant to Schedule 9 [Compensation on Termination];

“New Project Co” means the Person who has entered into or who will enter into the New Project Agreement with the Authority;

“New Service Provider Start Date” has the meaning set out in Schedule 8 [Payments];

“New Service Provider Transition Period” has the meaning set out in Schedule 8 [Payments];

“Nominal” means calculated in nominal terms at current prices recognizing adjustment for indexation in respect of forecast inflation;

“Non-Targeted Energy Consumption” has the meaning set out in Appendix 2C [Energy];

“Northern” means of or related to the geographical area comprised of the entire Northwest Territories and the Kitikmeot Region of Nunavut, most particularly the citizens resident of this geographical area, noting the composition of general ethnicity (Dene, Inuit, Inuvialuit, Metis, French Canadian, and Caucasian) as well as the cultural diversity within each ethnos;

“Notice of Intention to Arbitrate” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“Notice of Objection to Arbitration” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“Operating Period” means the period between the Service Commencement Date and the Termination Date;

“Operating Period Joint Committee” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Operating Period Representative” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Outbreak Cleaning” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Outbreak Cleaning Notice” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Outputs Summary Sheet” means the sheet labelled “Outputs” in the Financial Model;

“Parking Management Services” means the services described in Appendix 4G [Parking Management Services];

“Partners” means Bird Capital (STH) GP Holdings Inc, Carillion BHP (STH) GP Holdings Inc. and Hochtief Boreal Health Partner Inc., and each of them is referred to as a **“Partner”**;

“Patient Centred Care” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Paying Party” has the meaning set out in Section 9.3 (General Obligation to Pursue Third Person Recovery);

“Payment Adjustment Report” has the meaning set out in Schedule 8 [Payments];

“Payment Period” has the meaning set out in Schedule 8 [Payments];

“Performance Indicators” means the performance indicators identified as such in Schedule 4 [Services Protocols and Specifications];

“Performance Monitoring Program” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Performance Monitoring Report” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Permanent Repair” has the meaning set out in Schedule 8 [Payments];

“Permanent Repair Deadline” has the meaning set out in Schedule 8 [Payments];

“Permits” means all permissions, consents, approvals, certificates, permits, licences, statutory agreements, zoning and by-law amendments and variances, and authorizations required from any Governmental Authority, and all necessary consents and agreements from any third parties, needed to carry out the Project in accordance with this Agreement;

“Permitted Debt” means:

- (a) trade or other similar indebtedness incurred in the ordinary course of business (unless being contested in good faith and with appropriate proceedings with an adequate reserve therefor in accordance with GAAP having been placed on the Project Co’s books and records);
- (b) Taxes and governmental charges, salaries, related employee payments and trade payables;
- (c) contingent liabilities relating to the endorsement of negotiable instruments received in the normal course of business or incurred with respect to any Permit, Project Contract or this Agreement; and
- (d) Debt incurred by way of Partner Loans, but does not include any Senior Debt;

“Persistent Breach” means a breach or series of breaches by Project Co of any term, covenant or undertaking to the Authority in this Agreement (other than a breach for which Deduction could be made) which, due to the fact that such breach has:

- (a) continued for 60 calendar days or more after notice thereof from the Authority to Project Co; or
- (b) occurred 3 or more times in the previous 12 months,

demonstrates either a persistent inability, or a persistent unwillingness, to comply with its obligations under this Agreement;

“Person” means an individual, legal personal representative, corporation, body corporate, firm, partnership, trust, trustee, syndicate, joint venture, limited liability company, association, unincorporated organization, union or Governmental Authority;

“Personal Information” means ‘personal information’ as defined in the *Access to Information and Protection of Privacy Act* (Northwest Territories), which is collected, acquired, obtained by Project Co or the Authority in relation to or in the course of providing the Design, the Construction or the Services under this Agreement, and includes any information about an identifiable individual other than contact information, which is the name, position name or title, business telephone number, business address, business email or business fax number of the individual, or as otherwise defined in the *Access to Information and Protection of Privacy Act* (Northwest Territories);

“Pest Control Services” means the services described in Appendix 4I [Pest Control Services];

“Phasing Plan” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Planned Periodic Cleaning” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“Plans” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Plant Services” means the services described in Appendix 4C [Plant Services];

“Policy and Procedure Manual” has the meaning set out in Appendix 4A [General Management Services];

“Preferred Service Tenderer” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Prospective Service Tenderers” has the meaning set out in Appendix 4N [Market Testing Procedure];

“Preliminary Change Instruction” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Preliminary Estimate” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Pre-Refinancing Equity IRR” means the Equity IRR calculated immediately prior to the Refinancing but without taking into account the effect of the Refinancing and using the Financial Model as updated (including as to the performance of the Project) so as to be current immediately prior to the Refinancing;

“Prime Rate” means the annual rate of interest announced by The Canadian Imperial Bank of Commerce (or its successor), or any other Canadian chartered bank agreed to by the parties, from time to time as its “prime” rate then in effect for determining interest rates on Canadian dollar commercial loans made by it in Canada;

“Principal Insured Risk” means a risk that would be insured against by policies for the insurance referred to in any of Sections 1, 2 and 3 of Schedule 5 [Insurance Requirements];

“Procurement”, **“Procure”** and **“Procured”** have the meanings set out in Appendix 2D [Equipment and Furniture];

“Project” means the Design, Construction, financing, testing, commissioning, Maintenance and life cycle rehabilitation of the Facility, the Initial Remediation Work and all other works and ancillary services in accordance with this Agreement;

“Project Co Event of Default” has the meaning set out in Section 12.1 (Project Co Events of Default);

“Project Co Hazardous Substances” means those Hazardous Substances for which Project Co is responsible pursuant to Schedule 7 [Lands];

“Project Co Insolvency Event” means any of the following events:

- (a) a receiver, receiver manager or other encumbrance holder taking possession of or being appointed over, or any distress, execution or other process being levied or enforced upon, the whole or any material part of the assets of Project Co; or
- (b) any proceedings with respect to Project Co being commenced under the *Companies' Creditors Arrangement Act* (Canada) and if such proceedings are commenced against Project Co and are disputed by Project Co, such proceedings are not discontinued, withdrawn, dismissed or otherwise remedied within 30 Business Days; or
- (c) Project Co making an assignment for the benefit of its creditors, being declared bankrupt or committing an act of bankruptcy, becoming insolvent, making a proposal or otherwise taking advantage of provisions for relief under the *Bankruptcy and Insolvency Act* (Canada) or similar legislation in any jurisdiction, or any other type of insolvency proceedings being commenced by or against Project Co under the *Bankruptcy and Insolvency Act* (Canada) or similar legislation in any jurisdiction and, if proceedings are commenced against Project Co and are disputed by Project Co, such proceedings are not stayed, dismissed or otherwise remedied within 30 Business Days; or
- (d) Project Co ceasing to carry on business;

“Project Co Material Breach” means:

- (a) a failure by Project Co to pay any amount due and owing to the Authority under this Agreement on the due date (which amount is not being disputed in good faith) and Project Co has not remedied such failure to pay within 10 Business Days following notice from the Authority;
- (b) a failure by Project Co to:
 - (i) maintain the policies of insurance required to be maintained by Project Co under this Agreement;
 - (ii) maintain such policies on the terms required under this Agreement (including a failure to comply with its obligation under Schedule 5 [Insurance Requirements] to name the Authority as an insured party); or
 - (iii) provide evidence to the Authority as required by the terms of this Agreement that such policies have been taken out, maintained, paid for and renewed in accordance with the terms of this Agreement;
- (c) a Persistent Breach;
- (d) except as provided for in (a) through (c) above, a breach, or series of breaches, by Project Co of any agreement, covenant or undertaking made to the Authority in this Agreement (other than a breach for which a Deduction could be made), or any representation or warranty made by Project Co to the Authority in this Agreement (or any

ancillary certificate, statement or notice issued hereto) being incorrect when made, the consequence of which is:

- (i) a risk to the safety of the public;
 - (ii) a risk of material liability of the Authority to third Persons;
 - (iii) an adverse effect on the performance of the Design, the Construction or the Services and as a result thereof that the Authority is reasonably likely to be materially deprived of the benefit of this Agreement; or
 - (iv) any material provision of this Agreement being unenforceable against Project Co;
- (e) a breach by Project Co of Section 5 (Financing of the Project), other than a breach described in Section 12.1(i); or
- (f) any other fact or circumstance designated as a "Project Co Material Breach" under this Agreement, including those specified in Sections 9.4 and 10.3 of Schedule 2 [Design and Construction Protocols];

"Project Co Materials" has the meaning set out in Section 14.5 (Project Co Material);

"Project Co Person" means:

- (a) any director, officer, employee or agent of Project Co in each case acting as such;
- (b) any Project Contractor, any Sub-Contractor and any representative, advisor (including any legal and financial advisor) or contractor of Project Co, in any such Person's capacity as a provider of services, work or materials, directly or indirectly to Project Co in connection with the Project; or
- (c) any invitee of Project Co or any of the Project Co Persons referred to in (a) or (b) above who enters upon the Lands or, during the Existing Hospital Works Period, the Existing Hospital Lands;

"Project Co's End-Use Equipment" has the meaning set out in Schedule 3 [Design and Construction Specifications];

"Project Co's Quality Consultant" has the meaning set out in Schedule 2 [Design and Construction Protocols];

"Project Co's Rights" has the meaning set out in Section 8.13 (Equivalent Project Relief);

"Project Contractor" means the Design-Builder or any Service Provider and **"Project Contractors"** means any 2 or more of them;

“Project Contractor Breakage Costs” means the amount payable by Project Co to a Project Contractor under the terms of a Project Contract as a direct result of the termination of such Project Contract as a consequence of the termination of this Agreement but reduced (without duplication) to the extent that:

- (a) Project Co, the Project Contractors and any Sub-Contractors fail to take all reasonable steps to mitigate such amount;
- (b) such amount relates to any agreements or arrangements entered into by Project Co, the Project Contractors or the Sub-Contractors other than in the ordinary course of business and on commercial arm’s length terms;
- (c) such amount is a Distribution; and
- (d) such amount includes any loss of overhead or profit of the Service Providers or their Sub-Contractors relating to any period or costs after the Termination Date (except to the extent they are properly included in any reasonable commercial breakage fee set out in the applicable Project Contract or Sub-Contract);

“Project Contracts” means the Design-Build Agreement and the Services Contract;

“Project Design Principles” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Project Intellectual Property” means the Intellectual Property which is created, brought into existence, acquired, licensed or used by Project Co, any Project Contractor, any Sub-Contractor or any other third party, directly or indirectly, for the purposes of the Design or Construction of the Facility, the maintenance, improvement or testing of the Facility, or otherwise for the purposes of this Agreement but does not include the Financial Model;

“Project Risk Premium” has the meaning set out in Schedule 9 [Compensation on Termination];

“Project Schedule” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Proposal Extracts (Design and Construction)” means the provisions of Appendix 2F [Proposal Extracts (Design and Construction)];

“Proposal Extracts (Services)” means the proposal extracts attached as Appendix 4O [Proposal Extracts (Services)];

“Protest Action” means any civil disobedience, protest action, riot, civil commotion, blockade or embargo, including any action taken or threatened to be taken, by any Person or Persons protesting or demonstrating against:

- (a) the carrying out of any part of the Project (including the construction of the Facility); or
- (b) the construction or operation of public health care facilities in general, occurring after the Effective Date,

but excluding any lawful or unlawful strike, lockout, go-slow or labour or other industrial relations dispute or job action;

“Qualified Insurers” means reputable insurers of good standing in Canada, the United States, the United Kingdom, Europe or Australia having a credit rating of (1) A- VIII or better with AM Best or (2) A- or better with Standard & Pools;

“Qualified Person” means a person having the legal capacity, power and authority to become a party to and to perform all of the obligations of the Authority under this Agreement and whose payment obligations under this Agreement shall be supported by the GNWT;

“Qualifying Bank Transaction” means:

- (a) the disposition by a Senior Lender to a Qualifying Institution of any of its rights or interests in the Senior Financing Agreements;
- (b) the grant by a Senior Lender to a Qualifying Institution of any rights of participation in respect of the Senior Financing Agreements; or
- (c) the disposition or grant by a Senior Lender to a Qualifying Institution of any other form of benefit or interest in either the Senior Financing Agreements or the revenues or assets of Project Co, whether by way of security or otherwise;

“Qualifying Institution” means any of the following, provided it is not a Restricted Person, and provided none of its Affiliates is a Restricted Person for any reason other than by reason of section (d) of the definition of Restricted Person:

- (a) a bank listed in Schedule I, II or III of the *Bank Act* (Canada);
- (b) a Canadian trust company, insurance company, investment company, pension fund or other institution which manages at least ██████████ in securities, including entities wholly owned by any of the foregoing;
- (c) a bank regulated by the Board of Governors of the Federal Reserve System of the United States, a U.S. bank, saving and loan institution, insurance company, investment company, employee benefit plan or other institution that has or manages at least ██████████ in assets and would be a “qualified institutional buyer” under U.S. securities legislation, including entities wholly owned by any of the foregoing;
- (d) an institution which is recognised or permitted under the law of any member state of the European Economic Area (“EEA”) to carry on the business of a credit institution pursuant to Council Directive 2000/12/EC relating to the taking up and pursuit of the business of credit institutions or which is otherwise permitted to accept deposits in the United Kingdom or any other EEA member state;
- (e) an institution which is recognized or permitted under the law of any member state of the Organization for Economic Cooperation and Development (in this definition, the “OECD”) to carry on within the OECD member states the business of a credit institution, insurance

company, investment company or pension fund and which has or manages at least [REDACTED] in assets, including entities wholly owned by any such institution; or

- (f) any other institution consented to in writing by the Authority as a “Qualifying Institution”;

“**Qualifying Refinancing**” means any Refinancing that will give rise to a Refinancing Gain greater than zero that is not an Exempt Refinancing;

“**Qualifying Service Tender**” has the meaning set out in Appendix 4N [Market Testing Procedure];

“**Quality Assurance Plan**” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“**Quality Assurance Program**” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“**Quality System**” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“**Re-Bidding Costs**” has the meaning set out in Schedule 9 [Compensation on Termination];

“**Re-Bidding Process**” has the meaning set out in Schedule 9 [Compensation on Termination];

“**Re-Bidding Process Monitor**” has the meaning set out in Schedule 9 [Compensation on Termination];

“**Reactive Cleaning**” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“**Reasonably Expected Performance**” means Project Co’s reasonably expected quality of performance, as measured by the amount of Deductions, if any, that Project Co would have been reasonably expected to receive during the relevant Compensation Event or Excusing Event, as applicable, and determined as follows:

- (a) if a period of time equal to or greater than 6 months has elapsed since the Service Commencement Date, an average of the Deductions received by Project Co during the previous 6 month period;
- (b) if a period of time greater than 1 month but less than 6 months has elapsed since the Service Commencement Date, an average of the Deductions received by Project Co since the Service Commencement Date; or
- (c) if a period of time equal to or less than 1 month has elapsed since the Service Commencement Date or if Service Commencement has not been achieved, zero Deductions;

“**Receiving Party**” has the meaning set out in Section 9.3 (General Obligation to Pursue Third Person Recovery);

“**Recyclable Waste**” has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

“**Referee**” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“**Referee Agreement**” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“**Referee Notice**” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“**Refinancing**” means:

- (a) Project Co incurring, creating, assuming or permitting to exist any Debt other than Permitted Debt;
- (b) any transaction in which the Authority, with the consent or at the request of agreement of Project Co, grants rights to any Person under an agreement similar to the Lenders’ Remedies Agreement or any other agreement that provides for step-in rights or similar rights to such Person, other than the Lenders’ Remedies Agreement entered into on the Effective Date;
- (c) any amendment, variation, novation, supplement or replacement of any Senior Debt or Senior Financing Agreement;
- (d) the exercise of any right, or the grant of any waiver or consent, under any Senior Financing Agreement;
- (e) the disposition of any rights or interests in, or the creation of any rights of participation in respect of, the Senior Financing Agreements or Senior Debt or the creation or granting of any other form of benefit or interest in the Senior Financing Agreements, the Senior Debt or the contracts, revenues or assets of Project Co whether by way of security or otherwise; or
- (f) any other arrangement put in place by Project Co or another Person which has an effect which is similar to any of (a) through (e) above or which has the effect of limiting Project Co’s ability to carry out any of the actions referred to in (a) through (e) above,

but excluding any financing pursuant to Section 10.2 (Financing of Lump Sum Payment Amounts);

“**Refinancing Gain**” means an amount equal to the greater of zero and $[(A - B) - C]$, where:

A = the Net Present Value of Distributions (calculated on an after tax basis at the level of Project Co in a manner consistent with the Financial Model) immediately prior to the Refinancing (taking into account all effects (including the costs and expenses of the Authority pursuant to Section 5.8) of the Refinancing and using the Financial Model as updated (including as to the performance of the Project) so as to be current immediately prior to the Refinancing) to be made over the remaining term of this Agreement following the Refinancing;

B = the Net Present Value of Distributions (calculated on an after tax basis at the level of Project Co in a manner consistent with the Financial Model) projected immediately prior to the Refinancing (but taking into account only those effects of the Refinancing that were fully reflected in the Financial Model as of the Effective Date and no other effects (including the costs and

expenses of the Authority pursuant to Section 5.8) of the Refinancing, and using the Financial Model as updated (including as to the performance of the Project) so as to be current immediately prior to the Refinancing) to be made over the remaining term of this Agreement following the Refinancing; and

C = any adjustment required to raise the Pre-Refinancing Equity IRR to the Threshold Equity IRR calculated as a single payment to be paid as a Distribution on the date of the Refinancing;

“Reinstatement Plan” has the meaning set out in Section 6.4 (Project Co’s Obligations – Material Damage or Destruction);

“Reinstatement Works” has the meaning set out in Section 6.4 (Project Co’s Obligations – Material Damage or Destruction)

“Relevant Change in Law” means a Change in Law (other than a Discriminatory Change in Tax Law):

- (a) which specifically applies to
 - (i) the Project or health care-related projects whose design, construction, financing, maintenance and service provision are procured on a public-private partnership basis similar to that of the Project;
 - (ii) Project Co, its Partners or Project Contractors or Persons that have contracted on similar health care-related projects procured and contracted with the Authority or other statutory or public body on a public-private partnership basis similar to the Project; or
 - (iii) Persons holding shares or other evidences of ownership in Persons whose principal business is contracting on other similar health care-related projects procured and contracted on a public-private partnership basis similar to the Project and not other Persons; or
- (b) which principally affects or principally relates to the provision or operation of hospitals or healthcare premises,

and compliance with which would require a variation (as applicable) in the design, quality, scope, methodology or cost of the Design, the Construction or the Services;

“Relevant Works Change in Law” means a Change in Law (other than a Relevant Change in Law or a Discriminatory Change in Tax Law) that:

- (a) occurs after the Service Commencement Date; or
- (b) was not reasonably foreseeable at the Effective Date by an experienced contractor carrying out activities and/or performing design and/or other operations similar to those to be carried out and/or performed by Project Co or any Project Co Party in relation to the Project, and

which causes Project Co to incur Capital Expenditures to perform works affecting the Facility (being any work of alteration, addition, demolition or extension or variation in the quality or function of the Facility) which is not work which Project Co would otherwise be required to perform under this Agreement;

“Relief Event” means any of the following events or circumstances if and to the extent it interferes adversely with, or causes a failure of, the carrying out of the Design, the Construction, the Initial Remediation Work or the Services or causes an Unavailability Event:

- (a) fire, explosion, lightning, storm (including snowstorm) that exceeds a 1 in 50 year event in Yellowknife as measured by Environment Canada, flood, bursting or overflowing of water tanks, apparatus or pipes, ionising radiation, earthquake or any act of God similar to the foregoing, in each case to the extent it does not constitute a Force Majeure Event;
- (b) during the Construction Period or the Existing Hospital Works Period, as applicable, a failure by any utility company, local authority or other like body to perform works or provide services required to be provided by them in a reasonably timely manner or any unreasonable interference with the Construction or the Initial Remediation Work, as applicable, by any such body as a result of maintenance and other work;
- (c) lawful or unlawful strike, lockout, work-to-rule, job action or other labour dispute generally affecting the construction, building maintenance or facilities management industry or a significant sector thereof;
- (d) any delay of more than 3 days in respect or any critical path matter in the Project Schedule caused by compliance by Project Co with an order or direction by police, fire officials, medical health officer or any comparable public authority having the legal authority to make such order or give such direction;
- (e) a Change in Law during the Construction Period;
- (f) unreasonable delay in the payment of any Insurance Receivables;
- (g) accidental loss or damage to the Facility or any roads servicing the Lands;
- (h) during the Existing Hospital Works Period, accidental loss or damage to the Existing Hospital or any roads servicing the Existing Hospital Lands;
- (i) blockade or embargo to the extent it does not constitute a Force Majeure Event;
- (j) failure or shortage of fuel or transport;
- (k) during the Construction Period, delay to the Project Schedule caused or directly attributable to a delay by the Authority in the Category C Equipment approval process set out in Section 3.3 of Appendix 2D [Equipment and Furniture];
- (l) during the Construction Period, a state of public health emergency being declared by the Chief Public Health Officer of the Northwest Territories which causes Project Co to be

unable to establish or operate the Construction Site in accordance with the Project Schedule; and

(m) any other event which is stated in this Agreement to constitute a Relief Event,

except to the extent that any of such events arise or are contributed to, directly or indirectly, as a result of any wilful misconduct, negligent act or omission or non-compliance with the terms of this Agreement by Project Co or any Project Co Person;

“Renovation” means an alteration of the Facility, or an addition, re-construction or demolition of a portion of the Facility, undertaken at any time after the Service Commencement Date other than pursuant to the Life Cycle Requirements;

“Repair” means a repair to the Facility undertaken at any time after the Service Commencement Date except for the completion of Deficiencies and other than pursuant to the Life Cycle Requirements;

“Reporting Error” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Representative” means, as the case may be, a Design and Construction Representative or an Operating Period Representative;

“Respond” and **“Response”** has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Responding Party” has the meaning set out in Schedule 13 [Dispute Resolution Procedure];

“Response Time” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Restricted Person” means (i) any Person who, or (ii) any member of a group of Persons acting together, any one of whom:

- (a) has, directly or indirectly, its principal or controlling office in a country that is subject to any economic or political sanctions imposed by Canada for reasons other than its trade or economic policies;
- (b) has as any part of its business the illegal manufacture, sale, distribution or promotion of narcotic substances or arms, or is or has been involved in the promotion, support or carrying out of terrorism;
- (c) in the case of an individual, he or she (or in the case of a legal entity, any of the members of the board of directors or its senior executive managers) has been sentenced to imprisonment or otherwise given a custodial sentence (other than a suspended sentence) for any criminal offence (other than minor traffic offences or misdemeanours) less than 5 years prior to the date at which the determination of whether the person falls within this definition is being made;

- (d) has as its primary business the acquisition of distressed assets or investments in companies or organizations which are or are believed to be insolvent or in a financial standstill situation or potentially insolvent or are in financial distress;
- (e) is subject to any claim of the Authority in any proceedings (including regulatory proceedings) which have been concluded or are pending at the time at which the determination of whether the person falls within this definition is being made and which (in respect of any such pending claim, if it were to be successful) would, in the Authority's view, in either case, be reasonably likely to materially affect the ability of Project Co to perform its obligations under this Agreement;
- (f) has a material interest in the production of tobacco products;
- (g) has been convicted of an offence under the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act (Canada)*, or has been convicted of the commission of a money laundering offence or a terrorist activity financing offence under the *Criminal Code (Canada)*; or
- (h) whose standing or activities, in the Authority's reasonable opinion, are inconsistent with or likely to compromise the reputation or integrity of the Authority or the delivery of public services in the Northwest Territories so as to affect public confidence in those services, and

includes the Controlling Party of, and any Person Controlled by, a Person described in this definition;

"Return Date" has the meaning set out in Schedule 8 [Payments];

"Reviewed Drawings and Specifications" has the meaning set out in Appendix 2B [User Consultation and Design Review];

"Roads, Grounds and Landscaping Maintenance Services" has the meaning set out in Appendix 4F [Roads, Grounds and Landscaping Maintenance];

"Routine Cleaning" has the meaning set out in Appendix 4D [Housekeeping and Waste Management Services];

"Scheduled Maintenance" has the meaning set out in Appendix 4C [Plant Services];

"Security and Surveillance Services" means the services described in Appendix 4J [Security and Surveillance Services];

"Senior Debt" means:

- (a) all amounts outstanding, including interest and default interest accrued, from Project Co to the Senior Lenders under the Senior Financing Agreements, provided that default interest will not include any increased interest, fees or penalty amounts payable by

Project Co for any reason other than a failure by Project Co to pay any amount when due;

- (b) cost of early termination of interest rate or currency hedging arrangements and other breakage costs or make-whole amounts payable by Project Co to the Senior Lenders as a result of a prepayment under the Senior Financing Agreements; and
- (c) all other fees, costs and expenses for which Project Co is responsible under the Senior Financing Agreements;

“Senior Debt Service Amount” means, for any period, the principal and interest payable by Project Co to the Senior Lenders in the normal course (which, for greater certainty, does not include breach or default circumstances) under the Senior Financing Agreements;

“Senior Debt Termination Amount” has the meaning set out in Schedule 9 [Compensation on Termination];

“Senior Financing Agreements” means:

- (a) the trust indenture dated September 22, 2015; between Boreal Health Partnership as issuer, (ii) Bird Capital (STH) GP Holdings Inc., Hochtief Boreal Health Partner Inc., Carillion BHP (STH) GP Holdings Inc., as partners, and (iii) Computershare Trust Company of Canada as Indenture Trustee;
- (b) the senior bonds supplemental indenture dated September 22, 2015 entered into pursuant to the trust indenture described in (a);
- (c) the security agreements entered into pursuant to the trust indenture described in (a);
- (d) the Bonds (as defined in the Trust Indenture) issued pursuant to the supplemental indenture described in (b);
- (e) the Bond Underwriting Agreement (as defined in the Trust Indenture);
- (f) the Lenders’ Remedies Agreement;
- (g) the Design-Builder direct agreement dated on or about the date hereof between, inter alia, Project Co, the Indenture Trustee and the Design-Builder (and entitled the “DB Direct Lender Agreement”);
- (h) the Service Provider direct agreement dated on or about the date hereof between, inter alia, Project Co, the Indenture Trustee and the Service Provider (and entitled the “Service Provider Direct Lender Agreement”);
- (i) the Insurance Trust Agreement; and
- (j) any other document or agreement which the Indenture Trustee, Project Co and the Authority agree in writing is a Senior Financing Agreement,

copies of each of which have been delivered by Project Co to the Authority, and as amended from time to time in accordance with the terms of this Agreement;

“Senior Lenders” means lenders to whom Senior Debt is owed;

“Server” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Service Commencement” means that all of the following have been achieved in relation to the Facility:

- (a) the Architect has certified that substantial performance of the Facility, for the purpose of the *Mechanics Lien Act* (Northwest Territories), has been achieved;
- (b) an occupancy permit has been issued for the Facility or the City has issued a temporary occupancy permit or other written permission that is sufficient for occupancy of the Facility by the Authority for the Authority Activities;
- (c) Subject to Section 13 of Schedule 2 [Design and Construction Protocols] and any Service Commencement Deficiencies, Project Co has, to the Authority’s reasonable satisfaction, tested and confirmed that all relevant Category B Equipment, Category C Equipment, Category D1 Equipment and Category D2 Equipment has been installed in accordance with the manufacturer’s requirements and is functioning in accordance with the specifications included in the relevant Equipment purchase contract or purchase order;
- (d) Project Co has delivered to the Authority a report from the commissioning agent retained by Project Co under Schedule 2 [Design and Construction Protocols] confirming completion of all commissioning activities scheduled in the relevant Commissioning Plan to be completed before Service Commencement;
- (e) Project Co has completed the relevant training of Authority staff as required by Schedule 2 [Design and Construction Protocols];
- (f) Project Co has delivered to the Authority a Life Cycle Report as required by Schedule 4 [Services Protocols and Specifications];
- (g) Project Co has delivered to the Authority a Service Commencement and Startup Plan as required by Schedule 4 [Services Protocols and Specifications];
- (h) Project Co has delivered to the Authority the relevant record drawings; and
- (i) Project Co has delivered to the Authority the relevant operations and maintenance (O&M) manuals in accordance with Appendix 2E [Initial Project Schedule];

“Service Commencement Date” means the date when Project Co has satisfied all the criteria for Service Commencement for the Facility, as certified by the Independent Certifier in accordance with Schedule 2 [Design and Construction Protocols];

“Service Commencement Deficiency” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“**Service Failure**” has the meaning set out in Schedule 8 [Payments];

“**Service Failure Deduction**” has the meaning set out in Schedule 8 [Payments];

“**Service Level**” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“**Service Payment**” has the meaning set out in Schedule 8 [Payments];

“**Service Provider**” means Carillion Canada Inc. or any assignee or replacement permitted under this Agreement;

“**Service Tenderers**” has the meaning set out in Appendix 4N [Market Testing Procedure];

“**Service Tender Requirements**” has the meaning set out in Appendix 4N [Market Testing Procedure];

“**Service Tender Validity Period**” has the meaning set out in Appendix 4N [Market Testing Procedure];

“**Services**” means everything other than Design and Construction that Project Co is required to do to satisfy its obligations under this Agreement, including

- (a) the General Management Services;
- (b) the Help Desk Services;
- (c) the Plant Services;
- (d) the Housekeeping and Waste Management Services;
- (e) the Utility Management Services;
- (f) the Roads, Grounds and Landscaping Services;
- (g) the Parking Services;
- (h) the Environmental Sustainability Services;
- (i) the Pest Control Services;
- (j) the Security and Surveillance Services;
- (k) the Laundry and Linen Services;
- (l) the Catering Services; and
- (m) the Life Cycle Requirements and any Reinstatement Works;

“**Services Change**” has the meaning set out in Schedule 6 [Changes, Minor Works and Innovation Proposals];

“Services Contract” means the agreement between Project Co and the Service Provider, a certified copy of which has been delivered by Project Co to the Authority, as amended, supplemented or replaced from time to time in accordance with this Agreement;

“Services Protocols and Specifications” means the provisions of Schedule 4 [Services Protocols and Specifications];

“Services Quality Plan” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Site Weather Monitoring Station” has the meaning set out in Appendix 2C [Energy];

“Software” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Start-up Plan” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Sub-Contract” means any contract entered into by a Project Contractor (except Project Contracts), or a sub-contractor of a Project Contractor of any tier, with one or more Persons in connection with the carrying out of Project Co’s obligations under this Agreement, as amended or replaced from time to time;

“Sub-Contractor” means any Person that enters into a Sub-Contract;

“Sub-Contractor Termination Notice” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Submittal” has the meaning set out in Appendix 2B [User Consultation and Design Review];

“Submittal Schedule” has the meaning set out in Appendix 2B [User Consultation and Design Review];

“Suitable Substitute Project Co” has the meaning given to it in the Lenders’ Remedies Agreement;

“Supervening Event” means any of a Compensation Event, Relief Event, Excusing Event, Force Majeure Event or Eligible Change in Law Event;

“Supervening Event Notice” has the meaning set out in Section 8.2 (Procedures Upon the Occurrence of a Supervening Event);

“Support Services Building” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“System Lifecycle” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Target Service Commencement Date” means the date, as set out in the Project Schedule (as updated from time to time in accordance with Schedule 2 [Design and Construction Protocols]), that Project Co estimates the Service Commencement Date will occur;

“Targeted Energy Consumption” has the meaning set out in Appendix 2C [Energy];

“**Tax**” or “**Taxes**” means, from time to time, all taxes, surtaxes, duties, levies, imposts, rates, payments, assessments, withholdings, dues and other charges of any nature imposed by any Governmental Authority (including income, capital (including large corporations), withholding, consumption, sales, use, transfer, goods and services or other value-added, excise, customs, anti-dumping, countervail, net worth, stamp, registration, franchise, payroll, employment, health, education, business, school, property, local improvement, development, education development and occupation taxes, surtaxes, duties, levies, imposts, rates, payments, assessments, withholdings, dues and charges) together with all fines, interest, penalties on or in respect of, or in lieu of or for non-collection of, those taxes, surtaxes, duties, levies, imposts, rates, payments, assessments, withholdings, dues and other charges;

“**Taxable Shareholder Portion**” has the meaning set out in Schedule 9 [Compensation on Termination];

“**Temporary Alternative Accommodation**” has the meaning set out in Schedule 8 [Payments];

“**Temporary Alternative Accommodation Notice**” has the meaning set out in Schedule 8 [Payments];

“**Temporary Availability Condition**” has the meaning set out in Schedule 8 [Payments];

“**Temporary Repair**” has the meaning set out in Schedule 8 [Payments];

“**Temporary Repair Proposal**” has the meaning set out in Schedule 8 [Payments];

“**Term**” has the meaning set out in Section 2.1 (Term and Termination) of the Agreement;

“**Termination Date**” means the earlier of the Expiry Date or the date of earlier termination referred to in Section 2.1 (Term and Termination) of the Agreement;

“**Termination Date Benchmark Canada Bond Yield**” has the meaning set out in Schedule 9 [Compensation on Termination];

“**Termination Date Discount Rate**” has the meaning set out in Schedule 9 [Compensation on Termination];

“**Termination Payment**” means the amount owing by the Authority to Project Co pursuant to Schedule 9 [Compensation on Termination];

“**Termination Payment Date**” means the date on which the Authority must make the Termination Payment as provided for in Schedule 9 [Compensation on Termination];

“**Test Period**” has the meaning set out in Appendix 2C [Energy];

“**Threshold Equity IRR**” means ████████, being the Equity IRR as set out in the Financial Model;

“**Total Unavailability**” has the meaning set out in Schedule 8 [Payments];

“**Transfer Restriction Date**” has the meaning set out in Section 16.1 (Limitations on Assignment of Project by Project Co);

“Transition” has the meaning set out in Schedule 8 [Payments];

“Transition Manager” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Tripartite Agreement” means the agreement regarding the Initial Remediation Work of the Existing Hospital building dated September 22, 2015 between the Authority, the Commissioner of the Northwest Territories, Project Co, [REDACTED] and [REDACTED];

“Unallocated/Unassigned Space” has the meaning set out in Schedule 3 [Design and Construction Specifications];

“Unavailable” and **“Unavailability”** have the meanings set out in Schedule 8 [Payments];

“Unavailability Deduction” has the meaning set out in Schedule 8 [Payments];

“Unavailability Event” has the meaning set out in Schedule 8 [Payments];

“Undisclosed Environmental Liabilities” means all Hazardous Substances located in, on, below or adjacent to the Lands, other than Project Co Hazardous Substances;

“Uninsurable” means, in relation to a risk:

- (a) insurance as required under this Agreement is not available in respect of the Project with Qualified Insurers; or
- (b) the insurance premium payable or the terms and conditions for insuring such risk at the levels and on the terms required by this Agreement are such that contractors, concessionaires, owners or others having a substantially similar interest in a project such as the Project in Canada are not generally insuring against such risk with Qualified Insurers;

“Uninsurable Risk” has the meaning set out in Section 6.15 (Consequences of Risks Becoming Uninsurable);

“Unit Deduction Amounts” has the meaning set out in Schedule 8 [Payments];

“Units” means units or other equity interests of any class in the capital of Project Co;

“Updated Project Schedule” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“User Consultation Group” has the meaning set out in Schedule 2 [Design and Construction Protocols];

“Utility” or **“Utilities”** has the meaning set out in Appendix 4E [Utility Management Services];

“Utility Company” has the meaning set out in Appendix 4E [Utility Management Services];

“Utility Management Services” has the meaning set out in Schedule 4 [Services Protocols and Specifications];

“Valuator” means a firm of chartered accountants as represented by a fully qualified member of the Canadian Institute of Chartered Business Valuators;

“Weather Data” has the meaning set out in Appendix 2C [Energy]; and

“Work Plan” has the meaning set out in Schedule 2 [Design and Construction Protocols].

2. INTERPRETATION

This Agreement will be interpreted according to the following provisions, except to the extent the context or the express provisions of this Agreement otherwise require:

- (a) the parties waive the application of any rule of law which otherwise would be applicable in connection with the construction of this Agreement that ambiguous or conflicting terms or provisions should be construed against the party who (or whose counsel) prepared the executed agreement or any earlier draft of the same;
- (b) the table of contents, headings and sub-headings, marginal notes and references to them in this Agreement are for convenience of reference only, do not constitute a part of this Agreement, and will not be taken into consideration in the interpretation or construction of, or affect the meaning of, this Agreement;
- (c) each reference to a Section, Schedule or Appendix is a reference to a Section of, Schedule to or Appendix to a Schedule to this Agreement; each Appendix is uniquely designated by using the number of the Schedule to which the Appendix is attached following by an alphabetical designator in sequence (for example, Appendix 4A [General Management Services] means the Appendix attached to Schedule 4 [Services Protocols and Specifications]). A Schedule includes all of the Appendices attached to that Schedule;
- (d) each reference to an agreement, document, standard, principle or other instrument includes (subject to all relevant approvals and any other provision of this Agreement expressly concerning such agreement, document, standard, principle or other instrument) a reference to that agreement, document, standard, principle or instrument as amended, supplemented, substituted, novated or assigned;
- (e) each reference to a statute or statutory provision (including any subordinate legislation) includes any statute or statutory provision which amends, extends, consolidates or replaces the statute or statutory provision or which has been amended, extended, consolidated or replaced by the statute or statutory provision and includes any orders, regulations, by-laws, ordinances, orders, codes of practice, instruments or other subordinate legislation made under the relevant statute;

- (f) each reference to time of day is a reference to Mountain Standard time or Mountain Daylight Saving time, as the case may be;
- (g) words importing the singular include the plural and vice versa;
- (h) words importing a particular gender include all genders;
- (i) each reference to a public organization is deemed to include a reference to any successor(s) to such public organization or any organization or entity or organizations or entities which has or have taken over the functions or responsibilities of such public organization;
- (j) unless the context otherwise requires, each reference to “parties” means the parties to this Agreement and each reference to a “party” means any one of the parties to this Agreement, provided however that a reference to a third party does not mean a party to this Agreement;
- (k) all monetary amounts are expressed in Canadian Dollars;
- (l) whenever this Agreement obliges a party (the “**Payor**”) to pay any amount to the other party (the “**Payee**”) in respect of any costs, expenses, fees, charges, liabilities, losses, claims or other sums incurred by the Payee:
 - (i) such obligation will be construed as applying only to so much of such sums as have been properly incurred on an arm’s length commercial basis or, where not incurred on an arm’s length commercial basis (including when the payment is made to an Affiliate of the Payee), so much of them as are proper and reasonable; and
 - (ii) the Payee will, when requested by the Payor, provide supporting evidence of such costs, expenses, fees, charges, liabilities, losses, claims or other sums;
- (m) the Authority will not be imputed with knowledge of any fact, matter or thing unless that fact, matter or thing is within the actual knowledge of those of its employees or agents (including the Authority’s Representative) who have responsibilities in connection with the conduct of the Services or the Project;
- (n) without limiting the extent of its actual knowledge, Project Co will for all purposes of this Agreement be deemed to have such knowledge in respect of the Design, the Construction and the Services as is held (or ought reasonably to be held) by those employees or agents of Project Co, or any Project Contractor or Sub-Contractor, who have responsibilities in connection with the carrying out of the Design, the Construction or the Services to which the fact, matter or thing relates or is applicable;
- (o) each requirement for a thing or action to be “in accordance with” or “in compliance with” any standard, code or specification or other requirement or stipulation means that such

thing or action is to exceed or at least equal that standard, code, specification or other requirement or stipulation;

- (p) the words “include”, “includes” and “including” are to be construed as meaning “include without limitation”, “includes without limitation” and “including without limitation”, respectively;
- (q) when a party has “discretion”, it means that party has the sole, absolute and unfettered discretion, with no requirement to act reasonably or provide reasons unless specifically required under the provisions of this Agreement;
- (r) any consent contemplated to be given under this Agreement must be in writing;
- (s) general words are not given a restrictive meaning:
 - (i) if they are introduced by the word “other”, by reason of the fact that they are preceded by words indicating a particular class of act, matter or thing; or
 - (ii) by reason of the fact that they are followed by particular examples intended to be embraced by those general words;
- (t) words or abbreviations which have well-known trade meanings are used in accordance with those meanings;
- (u) the expression “all reasonable efforts” and expressions of like import, when used in connection with an obligation of either party, means taking in good faith and with due diligence all commercially reasonable steps to achieve the objective and to perform the obligation, including doing all that can reasonably be done in the circumstances taking into account each party’s obligations hereunder to mitigate delays and additional costs to the other party, and in any event taking no less steps and efforts than those that would be taken by a commercially reasonable and prudent Person in comparable circumstances but where the whole of the benefit of the obligation and where all the results of taking such steps and efforts accrued solely to that Person’s own benefit, provided that the foregoing will not require the Authority to:
 - (i) take any action which is contrary to the public interest, as determined by the Authority in its discretion; or
 - (ii) undertake any mitigation measure that might be available arising out of its status as a public body that would not normally be available to a private commercial party;
- (v) the expressions “by Project Co” and “by or through Project Co” and expressions of like import are synonymous and mean by Project Co or by anyone employed by or through Project Co, including Project Co and all contractors, sub-contractors and suppliers of any tier and their respective officers, employees, consultants and agents;

- (w) all accounting and financial terms used herein are, unless otherwise indicated, to be interpreted and applied in accordance with GAAP, consistently applied;
- (x) where this Agreement requires the calculation of something that is calculated in the Financial Model, including Net Present Value of Distributions and Equity IRR but not including Payments and Deductions, the calculation will be done in a manner consistent with the calculation methodology in the Financial Model;
- (y) if the time for doing an act falls or expires on a day that is not a Business Day, the time for doing such act will be extended to the next Business Day;
- (z) each provision of this Agreement will be valid and enforceable to the fullest extent permitted by law. If any provision of this Agreement is held to be invalid, unenforceable or illegal to any extent, such provision may be severed and such invalidity, unenforceability or illegality will not prejudice or affect the validity, enforceability and legality of the remaining provisions of this Agreement. If any such provision of this Agreement is held to be invalid, unenforceable or illegal, the parties will promptly endeavour in good faith to negotiate new provisions to eliminate such invalidity, unenforceability or illegality and to restore this Agreement as nearly as possible to its original intent and effect; and
- (aa) each release, waiver of liability and indemnity in this Agreement expressed to be given in favour of a party is and will be interpreted as having been given in favour of and may be enforced by that party and, in the case of the Authority, by the Authority Indemnified Persons, and, in the case of Project Co, by Project Co Persons.

3. PRIORITY OF AGREEMENTS AND SCHEDULES

In the event of ambiguities, conflicts or inconsistencies between or among any of the provisions of this Agreement, the provisions will prevail in the following order of precedence with each taking precedence over those listed subsequently:

- (a) the provisions establishing the higher quality, manner or method of performing the Design, Construction or Services, using the more stringent standards, will prevail, with the intent that the provisions which produce the higher quality with the higher levels of safety, reliability, durability, performance and service will prevail;
- (b) the provisions of the main body of this Agreement will prevail over any of the Schedules hereto other than Schedule 11 (Material Project Contractor Collateral Agreement) or Schedule 10 (Lenders' Remedies Agreement);
- (c) the provisions of the Lenders' Remedies Agreement will prevail over the Material Project Contractor Collateral Agreement; and
- (d) the provisions of this Agreement (other than the provisions of Appendix 2F [Proposal Extracts (Design and Construction)] and Appendix 4O [Proposal Extracts (Services)]) will prevail over the provisions of Appendix 2F [Proposal Extracts (Design and Construction)] and Appendix 4O [Proposal Extracts (Services)]; provided however that in determining

whether an ambiguity, conflict or inconsistency exists between Appendix 2F [Proposal Extracts (Design and Construction)] and Appendix 4O [Proposal Extracts (Services)] and any other provisions in this Agreement, to the extent that Appendix 2F [Proposal Extracts (Design and Construction)] and Appendix 4O [Proposal Extracts (Services)] include additional requirements for higher standards of quality or performance or additional requirements for more extensive scope of design, work or services than otherwise required, no such ambiguity, conflict or inconsistency will be deemed to exist and Project Co's obligations hereunder will include compliance with all such additional requirements; and

- (e) if the ambiguity, conflict or inconsistency is between a provision of general application and a provision that applies only to a specific part of the Design, Construction or Services, the provision that applies to the specific part of the Design, Construction or Services shall prevail for that specific part of the Design, Construction or Services.

4. FINANCIAL MODEL

Except where expressly referred to, the Financial Model and its contents will not be used to interpret, and will not affect the meaning of, this Agreement.

SCHEDULE 2

DESIGN AND CONSTRUCTION PROTOCOLS

1. DEFINITIONS

1.1 Definitions

In this Schedule, in addition to the definitions set out in Schedule 1 of this Agreement:

“Certificate of Service Commencement” has the meaning set out in Section 13.3(a) of this Schedule;

“City” means the City of Yellowknife;

“Commissioning Plan” has the meaning set out in Section 12.3 of this Schedule;

“Construction Monitoring Report” has the meaning set out in Section 4.7 of this Schedule;

“Construction and Remediation Period Joint Committee” has the meaning set out in Section 2.6 of this Schedule;

“Deficiency” means a Service Commencement Deficiency;

“Deficiency Deadline” has the meaning set out in Section 13.4;

“Demolition Plan” has the meaning set out in Section 6.12 of this Schedule;

“Design and Construction Representative” has the meaning set out in Section 2.1 of this Schedule;

“Environmental Report” means the report entitled “Final - Phase I Environmental Site Assessment” prepared by Stantec with respect to 550 Byrne Road, Yellowknife and dated September 18, 2014;

“Facility Move-In Schedule” has the meaning set out in Section 10.5;

“Geotechnical Reports” means the Geotechnical Investigation Report for the Stanton Territorial Hospital Planning Study prepared by AMEC and dated July 4, 2013 and the Topographic Survey of Lot 1, Block 162, Yellowknife prepared by Sub-Arctic Surveys Ltd. and dated July 3, 2013;

“Hazardous Materials Report” means the report entitled “Pre-Renovation Hazardous Material Assessment” prepared by Stantec Consulting Ltd. with respect to Stanton Territorial Hospital and dated October 24, 2014;

“Hospital” means the Existing Hospital from the Effective Date until Service Commencement and the Facility from Service Commencement to the Expiry Date, which shall include, as applicable, any other buildings or structures on the Lands following Service Commencement and the Existing Hospital Lands up until Service Commencement;

“Identified Future Buildings” means the future buildings or structures to be constructed on the Lands or Existing Hospital Lands, as applicable, that were identified and/or set out in the Authority’s request for proposals (SC795017) issued October 1, 2014, as amended thereafter from time to time;

“Independent Certifier” has the meaning set out in Section 3.1 of this Schedule;

“Infection Prevention and Control Plan” has the meaning set out in Section 5.11 of this Schedule;

“Intended Uses” means the uses for the Facility as described in the Design and Construction Specifications;

“Move Plan” has the meaning set out in Section 12.4 of this Schedule;

“Phasing Plan” has the meaning set out in Section 6.2 of this Schedule;

“Project Co’s Quality Consultant” has the meaning set out in Section 8.3 of this Schedule;

“Project Schedule” has the meaning set out in Section 10.1 of this Schedule;

“Quality Assurance Plan” has the meaning set out in Section 8.5 of this Schedule;

“Quality Assurance Program” has the meaning set out in Section 8.4 of this Schedule;

“Quality System” means an organizational structure, procedures, processes and resources necessary to implement a comprehensive, planned and systematic program, designed and implemented by Project Co pursuant to this Agreement, to ensure that the standards of quality control, quality management and quality assurance required by this Agreement are achieved by Project Co in every material aspect of the Design and Construction;

“Service Commencement Deficiency” has the meaning set out in Section 13.1;

“Updated Project Schedule” has the meaning set out in Section 10.2 of this Schedule;

“User Consultation Group” has the meaning set out in Section 5.4(a) of this Schedule; and

“Work Plan” has the meaning set out in Section 6.13 of this Schedule.

2. PARTIES’ DESIGN AND CONSTRUCTION REPRESENTATIVES

2.1 Appointment of Representatives

Project Co will within 5 Business Days of the Effective Date designate in writing a person (the **“Project Co Design and Construction Representative”**) to be Project Co’s single point of contact with respect to the Design, the Construction and the Initial Remediation Work. Project Co’s Design and Construction Representative will be a Key Individual. Project Co’s Design and Construction Representative may also be Project Co’s Operating Period Representative.

The Authority will within 5 Business Days of the Effective Date designate in writing a person (the **“Authority Design and Construction Representative”**) to be the Authority’s single point of contact with respect to the Design, the Construction and the Initial Remediation Work. The Authority may from time to time designate a second Design and Construction Representative. One will be the Authority’s primary point of contact with respect to Design and the other will be the Authority’s primary point of contact with respect to Construction and/or Initial Remediation Work. The Authority’s Design and Construction Representative may also be the Authority’s Operating Period Representative.

Except as otherwise set out in this Agreement, all costs or expenses incurred by or with respect to a party’s Design and Construction Representative will be for the account of that party.

2.2 Replacement

Subject to Section 2.8 of this Agreement in respect of Key Individuals, a party may at any time and in its own discretion by notice to the other party change the person appointed as the party’s Design and Construction Representative. If for any reason a party’s Design and Construction Representative is

unable or unwilling to continue then the party will immediately appoint a replacement Design and Construction Representative. If at any time a party objects to a Design and Construction Representative of the other party then the other party will give reasonable consideration to replacing the Design and Construction Representative with a person reasonably acceptable to the objecting party.

2.3 Authority of Representatives

A party's Design and Construction Representative will have full authority to act on behalf of and bind the party with respect to Design, Construction and Initial Remediation Work under this Agreement, including giving any review, acceptance, approval or confirmations which may be given by the Authority. Notwithstanding the above, a party's Design and Construction Representative will not have the authority to execute or agree to any amendments or to give any waivers of this Agreement.

2.4 Review Procedure

The parties will comply with Appendix 2B [User Consultation and Design Review].

2.5 Authority Not Responsible for Design or Construction

The Authority's review, acceptance, approval or confirmation of compliance with respect to any aspect of the Design, the Construction or the Initial Remediation Work, including pursuant to Appendix 2B [User Consultation and Design Review], will be for the Authority's benefit only, and no review, acceptance, approval or confirmation of compliance by the Authority's Design and Construction Representative or other representative of the Authority will in any way relieve Project Co of its obligations for all aspects of the Design and Construction of the Facility and the Initial Remediation Work except as may be expressly set out in this Agreement.

2.6 Construction and Remediation Period Joint Committee

- (a) Not less than 20 Business Days after the Effective Date, the Authority and Project Co will establish, and will maintain until the Initial Remediation Work Completion Date, a joint liaison committee (the "**Construction and Remediation Period Joint Committee**") consisting of the Design and Construction Representatives and such other members as the parties may agree from time to time.
- (b) The purpose of the Construction and Remediation Period Joint Committee is to provide a formal forum for the parties to consult and cooperate in all matters relating to the Existing Hospital and the Facility during the Construction Period and the Initial Remediation Work Period and any member appointed to the Construction and Remediation Period Joint Committee will not have any duties or obligations arising out of such appointment independent of such member's duties or obligations to the party making such appointment.
- (c) The Construction and Remediation Period Joint Committee:
 - (1) will only have the authority as expressly delegated to it by the Authority and Project Co, and both parties will give reasonable consideration to delegating appropriate authority to permit efficient decision making with respect to the Existing Hospital and the Facility;
 - (2) may strike, establish terms of reference for, delegate authority and appoint members having the necessary experience and qualifications to, such sub-committees as the Construction and Remediation Period Joint Committee may determine are necessary from time to time and all such sub-committees will report to the Construction and Remediation Period Joint Committee;

- (3) will establish protocols and procedures for undertaking the tasks and responsibilities delegated to it, including a co-operative and consultative process to review all documentation submitted to it in relation to the Design, the Construction and the Initial Remediation Work;
 - (4) may make recommendations to the parties on all matters relating to the Existing Hospital and the Facility, which the parties may accept or reject in their complete discretion; and
 - (5) will have no authority to agree to any amendments or to give any waivers of this Agreement.
- (d) Subject to the provisions of this Agreement, the members of the Construction and Remediation Period Joint Committee may adopt such procedures and practices for the conduct of the activities of the Construction and Remediation Period Joint Committee as they consider appropriate from time to time and:
- (1) may invite to any meeting of the Construction and Remediation Period Joint Committee such other (non-voting) persons as a member may decide; and
 - (2) receive and review a report from any person agreed by the members of the Construction and Remediation Period Joint Committee.
- (e) The Construction and Remediation Period Joint Committee will meet at least once each month at a location provided by Project Co at or near the Lands or the Existing Hospital Lands (unless otherwise agreed by its members) and from time to time as necessary. If any member of the Construction and Remediation Period Joint Committee requests an additional meeting, the parties will act reasonably in accommodating this request. Meetings of the Construction and Remediation Period Joint Committee will be convened on not less than 10 Business Days' notice (which will also identify the agenda items to be discussed at the meeting) provided that in an emergency a meeting may be called at any time on such notice as may be reasonable in the circumstances. The Construction and Remediation Period Joint Committee will be chaired by a representative of the Authority unless the Authority requires that a representative of Project Co chair the Construction and Remediation Period Joint Committee.
- (f) Project Co will keep minutes of all recommendations and meetings of the Construction and Remediation Period Joint Committee in accordance with Schedule 14 [Records and Reports] and circulate such minutes to the parties promptly within 5 Business Days of the making of the recommendation or the holding of the meeting.

3. INDEPENDENT CERTIFIER

3.1 Appointment

The parties will cooperate to jointly appoint a person (or firm of persons) (the "**Independent Certifier**"), who is:

- (a) qualified and experienced with respect to the design and construction of projects similar to the Project, and
- (b) independent from both the Authority and Project Co (and who will be impartial to the parties), to provide certification services for the benefit of the parties during the Construction Period and the Initial Remediation Work Period. The parties will enter into an agreement with the Independent Certifier on the terms generally as set out in

Appendix 2A [Independent Certifier Agreement]. The parties confirm that Project Co may also appoint the Independent Certifier to provide certification services in respect of the Design-Build Agreement.

3.2 Appointment and Replacement

If within 20 Business Days of the Effective Date the Independent Certifier has not been appointed, or if for any reason during the Construction Period or the Initial Remediation Work Period the Independent Certifier is unable or unwilling to continue to perform the Independent Certifier services or if the Independent Certifier's appointment has been terminated by the Authority and Project Co, then:

- (a) within 5 Business Days of the date that is 20 Business Days after the Effective Date (or within 5 Business Days of the date of termination of the Independent Certifier's appointment, if applicable), Project Co will provide the names of 3 candidates acceptable to Project Co for consideration by the Authority;
- (b) within 10 Business Days of receiving the candidate names, the Authority will notify Project Co of the candidates acceptable to the Authority, and the parties will cooperate to enter into a contract with an acceptable candidate generally in the form set out in Appendix 2A [Independent Certifier Agreement]; and
- (c) if none of the candidates are acceptable to the Authority, acting reasonably, or if for any reason an Independent Certifier is not appointed within 40 Business Days of the Effective Date (or within 20 Business Days of the date of termination of the Independent Certifier's appointment, if applicable), then either party may immediately apply to a judge of the Supreme Court of the Northwest Territories for the selection of an Independent Certifier, providing the other party the opportunity to participate in the selection and appointment process.

3.3 Monthly Inspections and Report

The parties will require the Independent Certifier to:

- (a) consult with the Design-Builder and others involved in the Design; and
- (b) conduct inspections of the Construction and Initial Remediation Work,

as the Independent Certifier determines is required for purposes of the Independent Certifier's functions under this Agreement and, no later than the 10th day of each month, prepare and deliver to the Authority and Project Co a monthly written report containing a description of:

- (c) the Design and Construction and Initial Remediation Work completed in the previous month; and
- (d) the progress of the Design and Construction and Initial Remediation Work relative to the Updated Project Schedule, with an overview analysis of variances and an assessment of whether the Project is on-time and on-budget.

3.4 Payment Certificates

The Independent Certifier will prepare and deliver to the Authority and Project Co, as applicable:

- (a) on a quarterly basis, certificates certifying the Cost to Date and the Cost to Complete of the Facility no later than 10 Business Days prior to the date of each scheduled Construction Payment; or

- (b) on a monthly basis, certificates certifying the Cost to Date and the Cost to Complete of the Initial Remediation Work no later than 10 Business Days prior to the end of the following month in which the certificate was completed.

The Authority and Project Co specifically agree to the following with respect to the preparation and delivery of the payment certificates by the Independent Certifier:

- (c) the Cost to Date certificate will certify actual costs incurred by or on behalf of Project Co;
- (d) the Cost to Complete certificate will be an estimate of Project Co's costs to complete based on Project Co's costs and progress of the completed Construction or Initial Remediation Work, as applicable; and
- (e) except as required under Section 3.3 of this Schedule, Independent Certifier will have no role in monitoring or inspecting, or in giving any directions or instructions, with respect to any aspect of the Design, the Construction or the Initial Remediation Work.

3.5 Application for Certificate of Service Commencement

The parties will require the Independent Certifier to perform the obligations of the Independent Certifier described in Section 13 of this Schedule.

3.6 Permitted Access

Project Co will give the Independent Certifier access to the Design and Construction and Initial Remediation Work as the Independent Certifier reasonably requests in order to be fully informed as to the progress of the Design and Construction including:

- (a) access to drawings, specifications, schedules, records, and other documents or data relating to the Design and Construction and Initial Remediation Work, including such information that is being produced by or in the possession of the Design-Builder or others; and
- (b) access to the Lands and the Existing Hospital Lands,

and Project Co will:

- (c) permit the Independent Certifier to attend all Design and Construction and Initial Remediation Work meetings during the Construction Period except to the extent Project Co and the Authority expressly otherwise agree; and
- (d) keep the Independent Certifier fully informed as to the progress of the Construction and Initial Remediation Work, including giving notice in accordance with Good Industry Practice of any part of the work on the Facility before it becomes covered up and unavailable for inspection.

3.7 No Responsibility for Design or Construction

Nothing in this Agreement (including this Schedule) or in the parties' agreement with the Independent Certifier will be interpreted as giving the Independent Certifier any responsibility or authority for any aspect of the Design or the Construction, or as relieving Project Co of its responsibility for the Design and Construction as set out in this Agreement, and neither Project Co nor the Design-Builder nor any Sub-Contractor will be entitled to rely on any review, acceptance, approval or confirmation that the Independent Certifier may give with respect to Design or Construction.

4. PROJECT CO'S RESPONSIBILITIES

4.1 Design/Build Responsibility

Notwithstanding any other provision of this Agreement, Project Co will:

- (a) have complete responsibility for the Design and Construction of the Facility;
- (b) have complete responsibility for the Initial Remediation Work;
- (c) perform and complete the Design, the Construction, and the Initial Remediation Work:
 - (1) in accordance with all terms of this Agreement including the terms of this Schedule and the Design and Construction Specifications;
 - (2) so as to provide a new health care facility that at Service Commencement:
 - (A) is complete and operational and fit for the Intended Uses;
 - (B) is fully integrated with other existing buildings or structures or any Identified Future Buildings on the Lands and the Existing Hospital Lands, as described in the Design and Construction Specifications;
 - (C) will permit Project Co to provide the Services in accordance with the requirements of this Agreement; and
 - (D) is fully compliant with the applicable requirements set out in Schedule 3 [Design and Construction Specifications] and Schedule 4 [Service Protocols and Specifications]; and
 - (3) to reflect and capture the intent and benefits to the Authority of the Proposal Extracts (Design and Construction).

Each of the obligations in Sections 4.1(c)(1), 4.1(c)(2) and 4.1(c)(3) of this Schedule are independent obligations, and the fact that Project Co has satisfied one obligation will be no defence to an allegation that it has failed to satisfy another.

4.2 Standard of Performance for Design and Construction

Without limiting the other requirements of this Agreement, Project Co will perform the Design, the Construction and the Initial Remediation to the standards required by Schedule 3 [Design and Construction Specifications].

4.3 Defects in Design or Construction

Project Co will, without cost to the Authority, and without limiting Project Co's obligations to perform the Services as set out in this Agreement, including Schedule 4 [Services Protocols and Specifications], correct any Defect that becomes apparent at any time during the Term, subject to the terms of this Agreement, including any Scheduled Maintenance and the Handback Requirements.

4.4 Compliance with Laws

Project Co will undertake and perform the Design, the Construction, and the Initial Remediation Work in accordance with applicable Laws, and so that all elements of the Design, the Construction and the Initial Remediation Work, including all workmanship, construction equipment and materials, and the supply and

installation of Equipment, meet or exceed the requirements of applicable Laws. If there is any conflict or ambiguity between the provisions of applicable Laws, or between a provision of applicable Laws and the Design and Construction Specifications, or between provisions of the Design and Construction Specifications, then the provision of higher quality or higher standard will govern.

4.5 Permits for the Design and Construction

Except as expressly provided otherwise in this Agreement, Project Co will obtain all Permits required for the Design, the Construction and the Initial Remediation Work. Project Co will keep the Authority's Design and Construction Representative fully informed of the details of all discussions and negotiations with Governmental Authorities with respect to all Permits for which it is responsible and, upon request from the Authority's Design and Construction Representative, Project Co will provide to the Authority copies of all documentation and correspondence with a Government Authority relating to such Permits. Project Co will provide reasonable advance notice to the Authority of any meetings with the City or other Governmental Authorities (where practicable) and upon request by the Authority a representative of the Authority may attend any such meetings. Project Co assumes all risk and costs arising in relation to Permits for which Project Co is responsible as described in this Section 4.5, including delays to the Project Schedule arising from delays in obtaining Permits or inability to obtain Permits, conditions of obtaining Permits, or amendments to Permits as may be required.

The Authority will provide Project Co with such information within the Authority's possession, and co-operate with Project Co, as Project Co may reasonably require in relation to all Permits for which Project Co is responsible.

4.6 Energy

Project Co will comply with the requirements of Appendix 2C [Energy].

4.7 Periodic Reporting

Project Co will prepare and deliver to the Authority's Construction Period Representative within 5 Business Days of the end of each month during the Construction Period a construction monitoring report (the "**Construction Monitoring Report**"), which will include the following information with respect to the relevant month:

- (a) all monitoring which has been performed regarding the Design and Construction, and Initial Remediation Work and a summary of all findings;
- (b) a summary of local and Northern involvement in the Design and/or Construction;
- (c) a summary of any Design or Construction occupational health and safety events; and
- (d) an assessment of whether the Project is on-time and on-budget.

If Project Co fails to deliver a Construction Monitoring Report to the Authority's Construction Period Representative within 5 Business Days of the end of a relevant month, the Authority will be entitled to make a Deduction of [REDACTED] for each week or part thereof after the date falling 5 Business Days after the end of the relevant month until Project Co has delivered the relevant Construction Monitoring Report to the Authority's Construction Period Representative. Any Deduction the Authority is entitled to make pursuant to this Section 4.7 will be made from the subsequent Service Payment(s) payable to Project Co pursuant to Schedule 8 [Payments].

5. DESIGN

5.1 Additional Design Considerations

In addition to other requirements of this Agreement, Project Co will undertake and perform the Design so that the Design:

- (a) is undertaken by a design team exercising such degree of care, skill and diligence as would reasonably be expected from consultants qualified to perform services similar in scope, nature and complexity to the Design, as of the date of this Agreement, and Project Co will appoint a design team that:
 - (1) is so qualified;
 - (2) includes (as required by applicable Law or Good Industry Practice) licensed or registered professional engineers and architects;
 - (3) has sufficient expertise and experience to expeditiously and efficiently perform all of the Design in a proper and professional manner to the standard set out in this Agreement; and
 - (4) has sufficient expertise and experience designing infrastructure to be constructed, operated and maintained in similar environmental and geotechnical conditions as in the Lands and the Existing Hospital Lands;
- (b) includes specific consideration of “constructability” and “life cycle” cost issues at all stages of Design, as appropriate; and
- (c) includes consideration of efficient and cost-effective operation and maintenance.

5.2 Support Spaces

Project Co shall also review, plan and integrate into the Design any and all support spaces that are not described in the Design and Construction Specifications, or elsewhere in the Project Agreement, but are required for effective delivery of the Services. Such support spaces may include, but are not limited to, spaces for food preparation, waste removal and/or linen collection.

5.3 Zoning Approval

Copies of related documents have been made available to Project Co. Project Co will be fully responsible to obtain all other permits and approvals required for the Construction of the Facility including any "Development Permit" that may be required, and entering into "Servicing Agreements" as may be required by the City of Yellowknife. Without limiting Section 4.5, Project Co will be responsible for all costs associated with such permits and agreements, including development cost charges.

5.4 Design Process

Project Co will undertake the Design of the Facility:

- (a) in accordance with Appendix 2B [User Consultation and Design Review], including providing Submittals to the Authority in accordance with the Submittal Schedule and undertaking consultation with representatives of the Facility Users (the “**User Consultation Group**”);

(b) in phases progressively, with each phase capturing the information and detail of a previous phase, as follows:

(1) Schematic Design Phase

This phase will include supplemental information not included in Appendix 2F [Proposal Extracts (Design and Construction)] and development of drawings and other documents illustrating the scale and character of the Facility, architecture and all engineering systems and any development permit (if applicable) in sufficient detail to describe how all the parts of the Facility functionally relate to each other, such as the site plan, spatial relationship diagrams, principal floor plans, building systems, sections, and elevations; together with a written project brief.

During this phase, Project Co will also submit a 3D fly-through animation of the Facility.

At a minimum Project Co will address the following items for the Facility:

- (A) proposal for a design vision, aesthetics, materials and building character, including Facility elevations and including, as required by Schedule 3, a master colour sample palette and a sample board for exterior material finishes;
- (B) an environmental wind and snow study of the Lands;
- (C) how the design promotes close ties with the neighbourhood and integration with the surrounding community;
- (D) how the design promotes coherent and harmonious integration of the architectural elements;
- (E) design principles: design vision, Project Co's overall approach to achieving Facility Users' objectives;
- (F) plan of the Lands and the Existing Hospital Lands context showing building blocks and main accesses and egresses;
- (G) plan of the Lands and the Existing Hospital Lands, focusing on landscape design, access, egress and drop-offs (pedestrian, vehicle, ambulance and fire trucks);
- (H) plans of functional department blocking, layouts, building stacking and links, internal and external flow of circulation and department drawings;
- (I) analysis of preliminary plans for the flow of patients, personnel and material;
- (J) site and building flexibility concepts;
- (K) a comparison of the functional space requirements set out in Appendix 3A [Clinical Specifications] and that of the proposed design;
- (L) analysis of space organization to verify if spaces offer medical and support teams optimal processes compared to the process maps;

- (M) verification of aspects of accessibility and signage concepts;
- (N) efficient integration of major equipment for optimal operations;
- (O) description of all information management and information technology and security systems and how these systems will enable and enhance clinical functionality;
- (P) allocation of type, load and location of all patient lift systems;
- (Q) a threat and risk assessment for the Lands;
- (R) allocation of size, specifications, orientation and location of all headwall systems; and
- (S) plans showing phasing for Construction.

The end of this phase for the Facility will occur when all Schematic Design Submittals for the Facility have been assigned a "REVIEWED" comment, after which the design development phase may begin.

(2) Design Development Phase

This phase will include drawings and other documents, including a site plan, elevations and sections, together with a written project brief detailing area calculations, detailing all building systems and outline specifications, to fully describe the size and character of the entire Facility including the architectural, landscaping, civil, structural, mechanical, electrical and IMIT systems, materials and other elements to fully describe the Facility.

At a minimum Project Co will address the following items for the Facility:

- (A) developed design;
- (B) an updated environmental wind and snow study of the Lands, if applicable;
- (C) signage, orientation, etc.;
- (D) developed exterior elevations of the buildings, wall cross-sections;
- (E) developed integration of exterior spaces, including courtyards, vehicle access/egress (including drop-off and pick-up access to parking, temporary parking, etc.).
- (F) developed integration of other Hospital buildings;
- (G) developed interior concepts and key elevations;
- (H) relevant draft policies and plans as required by Schedule 4 [Services Protocols and Specifications], including Appendix 4C [Plant Services];
- (I) developed landscape plans;

- (J) developed room numbering plan for Authority use (public and patient wayfinding);
- (K) developed Construction phasing plans;
- (L) the following related to clinical aspects:
 - (i) review of drawings based on the comments from the schematic design phase;
 - (ii) plans showing all rooms with dimensions: interior elevations and reflected ceiling plans, with relevant equipment shown;
 - (iii) a full lighting and switching layout for each room and floor plates;
 - (iv) develop interior finishes (flooring, walls, wall protection and ceiling finishes) for all rooms and floor plates;
 - (v) verification of the impact of the layout of the premises on the flow of patients, personnel and material;
 - (vi) efficient integration of major equipment for optimal operations;
 - (vii) review wayfinding strategies from the proposal stage and how it will be incorporated with details in the current design;
 - (viii) review standard millwork types and details;
 - (ix) review of door controls and hardware concepts/strategies; and
 - (x) review of security strategies.
- (M) the following related to technical aspects:
 - (i) roof plan;
 - (ii) main engineering component drawings that relate to the connection of municipal infrastructures and public services;
 - (iii) main engineering component drawings that relate to the clinical design;
 - (iv) main engineering component drawings that relate to equipment infrastructure;
 - (v) main engineering component drawings that relate to the mechanical system;
 - (vi) main engineering component drawings that relate to the electrical system;
 - (vii) main engineering component drawings that relate to the plumbing system;

- (viii) main engineering component drawings that relate to the medical gas system;
 - (ix) main engineering component drawings that relate to landscaping, exterior lighting, storm water retention and civil engineering;
 - (x) main engineering component drawings that relate to the structural system including links to other Hospital buildings.
 - (xi) main engineering component drawings that relate to the life safety system;
 - (xii) drawings indicating future engineering system flexibility; and
 - (xiii) redundancy and spare capacity calculations. Clinical and technical aspects may be combined.
- (N) At a minimum Project Co will address the following items for clinical equipment and information management and information technology:
- (i) main component drawings that relate to the clinical equipment; and
 - (ii) main component drawings that relate to all information management and information technology

(3) Construction Documents Phase

This phase will include construction documents consisting of drawings and specifications describing in detail the requirements for the construction of all components, systems and equipment for the Facility:

- (A) at 50% completion; and
- (B) at 95% completion,

in accordance with the Submittal Schedule, in a timely way in advance of Construction with sufficient detail to permit the Authority to understand and assess the Design of the Facility.

If Project Co intends to proceed with construction of an element of the Facility in advance of the completion of the design of the entire Facility then Project Co will deliver the 50% and 95% construction documents for that element (with sufficient accompanying detail to permit the Authority to understand and assess the design of that element) in advance of the design documents for other elements of the Facility;

- (c) so that in each phase, Project Co will provide to the Authority the level of detail and documentation that the Authority would customarily receive or expect to receive for a facility similar to the Facility in accordance with Good Industry Practice, including (as applicable to a particular phase):
- (1) dimensioned floor plans and elevations showing all millwork;
 - (2) furniture and equipment;

- (3) interior elevations for all rooms and spaces, including all interior finishes, millwork, mechanical and electrical;
- (4) exterior building elevations;
- (5) completed site and landscaping plans;
- (6) room data sheets, including the following information:
 - (A) room acoustics
 - (i) STC rating
 - (ii) noise level in room
 - (B) daylight requirements
 - (C) fire
 - (i) fire resistance rating
 - (ii) sprinkler
 - (iii) sprinkler head type
 - (iv) alarms
 - (v) smoke detectors
 - (D) door/screen
 - (i) type
 - (ii) frame
 - (iii) finish
 - (iv) protection
 - (v) access controls
 - (E) ceiling conditions
 - (i) height
 - (ii) material
 - (iii) finish
 - (iv) ceiling notes
 - (F) wall protection
 - (G) floor

- (i) finish
- (ii) structural loading
- (iii) base
- (iv) base height
- (H) accessories list
- (I) equipment list
- (J) plumbing fixture list
- (K) plumbing
 - (i) fixture count
 - (ii) water type and temperature
 - (iii) drains
 - (iv) fuel
 - (v) compressed air
 - (vi) compressed gas
 - (vii) medical gas
- (L) HVAC
 - (i) room class
 - (ii) number of occupants
 - (iii) activity level
 - (iv) noise level
 - (v) equipment heat dissipation
 - (vi) temperature
 - set point
 - monitor and control requirements
 - (vii) relative humidity
 - set point
 - monitor and control requirements

- (viii) relative pressure
 - set point
 - monitor and control requirements
- (ix) ventilation
 - total air exchange
 - pre-filtration
 - final filtration
 - room air recirculation
 - exhaust air
 - supply air diffusion
 - monitor and control requirements
- (x) electrical
 - patient area classification
 - monitor and control requirements
 - device list
 - lighting
 - alarms
 - data
 - electrical
 - cable TV
 - telephone
 - wireless
 - intercom
 - nurse call
 - clock
 - code
 - CCTV

- (7) room finish schedules;
- (8) reflected ceiling plans;
- (9) interior finishes;
- (10) a written report detailing and describing the manner in which the following have been taken into account in the Design:
 - (A) clinical operations and delivery;
 - (B) energy efficiency/sustainability;
 - (C) material selection;
 - (D) constructability;
 - (E) Life Cycle Requirements; and
 - (F) building operating services; and
- (11) clearly identifying sections for:
 - (A) architectural design;
 - (B) site development and landscaping;
 - (C) structural design;
 - (D) mechanical design;
 - (E) electrical design; and
 - (F) sustainable design.

Project Co will only issue drawings and specifications for construction purposes based on Reviewed Drawings and Specifications as described in Appendix 2B [User Consultation and Design Review]. Project Co will print drawings issued for construction purposes (“**Issued For Construction Drawings**”) on paper that is a distinct colour, and will provide copies of all Issued For Construction Drawings to the Authority as soon as possible after they are issued for construction.

This Section 5.2 does not limit Project Co’s obligation to comply with any requirements set out in the Design and Construction Specifications in relation to the stages and requirements for Design.

5.5 Design Change

The following will apply to the Authority’s requests for amendments to the design of the Facility:

- (a) revisions to drawings, specifications, equipment and additional Design requested by the Authority under the processes described in Section 5 of this Schedule and in Appendix 2B [User Consultation and Design Review] are not Changes and will be completed at Project Co’s cost (except to the extent that any such requested revision would constitute a material change to the Design and Construction Specifications, the terms of Schedule 6 [Changes, Minor Works and Innovation Proposals] will apply and such revision will not be implemented except under a Change Certificate issued by the Authority); and

- (b) if and to the extent the Authority requires a variation of any Design described in the Reviewed Drawings and Specifications (other than a variation required to bring the Design into conformity with this Agreement then such variation will be a Change and the terms of Schedule 6 [Changes, Minor Works and Innovation Proposals] will apply.

5.6 Building Information Modeling

Project Co will undertake the Design utilizing a fully integrated, three-dimensional, real-time dynamic building information modeling (“**BIM**”) capable software solution that meets the requirements set out in this Section.

- (a) BIM Platform. Project Co will use a BIM platform that:
 - (1) is a relational database with object-orientated capabilities;
 - (2) is capable of three dimensional (3D) parametric modeling;
 - (3) is fully integrated to support all design disciplines,
 - (4) supports data attributes associated with objects;
 - (5) allows exchange of information between the component parties and other software solutions utilizing industry foundation classes (IFC).
- (b) Visualization. The Authority’s goal in requiring BIM is to help with providing clarity during the Design so that the communication of ideas, particularly to those groups not familiar with interpreting two dimensional drawings, is enhanced. Accordingly, Project Co will:
 - (1) use an active 3D model for all design, user group meetings (in addition to paper documents); and
 - (2) use colour to distinguish, zones, ratings, systems, etc. to support the communication of the design and provide clarity of intent;
- (c) Submittals. Refer to Appendix 2B [User Consultation and Design Review] for requirements related to Submittals.

5.7 Mock-Ups and Prototype Rooms

Project Co will, at its cost and as part of the user consultation and design review process described in Appendix 2B [User Consultation and Design Review], provide and make available to the Authority for review the “mock-ups” and “prototype” rooms described in this Section 5.5. Project Co will include dates on the Submittal Schedule for construction of and for Authority review of mock-ups. The time periods for Authority review and comments on Submittals set out in Appendix 2B will apply to mock-ups.

- (a) By the date set out in the Submittal Schedule, Project Co will provide as part of the schematic design phase clinical user meetings 1:1 scale mock-ups (using either paper, tape markings on the floor or similar) of the following rooms indicating the dimensions and sizing of the room and the location and configuration of millwork, casework, furniture, services, equipment and headwalls:
 - (A) Standard Patient Bedroom with Washroom, Vestibule/Charting Area and Supply Alcove;

- (B) Airborne Isolation (AIR) Bedroom with Anteroom, Washroom and Supply Alcove;
 - (C) Mental health patient bedroom;
 - (D) Intensive Care Unit Bedroom Suite;
 - (E) Labour/ Delivery/Recovery/Postpartum Room (LDRP);
 - (F) Ambulatory Care Exam/Consult room;
 - (G) Medication Room;
 - (H) Clean Room;
 - (I) Soiled Room;
 - (J) Hybrid Operating Room;
 - (K) Endoscopy / Procedure room;
 - (L) Recovery Cubicle;
 - (M) Emergency department – Trauma/Resuscitation Room;
- (b) By the date set out in the Submittal Schedule, Project Co will provide as part of the design development phase clinical user meetings a 3-dimensional rendering of the following rooms indicating the dimensions and sizing of the room and the location and configuration of millwork, casework, furniture, services, equipment and headwalls:
- (A) Standard Patient Bedroom with Washroom, Vestibule/Charting Area and Supply Alcove;
 - (B) Airborne Isolation (AIR) Bedroom with Anteroom, Washroom and Supply Alcove;
 - (C) Mental health patient bedroom;
 - (D) Intensive Care Unit Bedroom Suite;
 - (E) Labour/ Delivery/Recovery/Postpartum Room (LDRP);
 - (F) Ambulatory Care Exam/Consult room;
 - (G) Medication Room;
 - (H) Clean Room;
 - (I) Soiled Room;
 - (J) Hybrid Operating Room;
 - (K) Endoscopy / Procedure room;
 - (L) Recovery Cubicle;

- (M) Emergency department – Trauma/Resuscitation Room;
- (c) By the date set out in the Submittal Schedule, Project Co will provide as part of the design development phase fully constructed mock-ups of the following rooms (at a location either within the Facility as it is under construction or at another location provided by Project Co near the Facility), with mock-ups of millwork, casework, furniture, services, equipment and headwalls included in the design of the room so that the Authority and the User Consultation Group can experience all features of the Design and make Design decisions:
- (A) Standard Patient Bedroom with Washroom, Vestibule/Charting Area and Supply Alcove;
 - (B) Airborne Isolation (AIR) Bedroom with Anteroom, Washroom and Supply Alcove;
 - (C) Mental health patient bedroom;
 - (D) Intensive Care Unit Bedroom Suite;
 - (E) Labour/ Delivery/Recovery/Postpartum Room (LDRP);
 - (F) Ambulatory Care Exam/Consult room;
 - (G) Medication Room;
 - (H) Clean Room;
 - (I) Soiled Room;
 - (J) Hybrid Operating Room;
 - (K) Endoscopy / Procedure room;
 - (L) Recovery Cubicle;
 - (M) Emergency department – Trauma/Resuscitation Room;
- (d) During Construction, Project Co will construct an in-situ “prototype” of each of the following rooms and make each prototype available to the Authority at appropriate stages of construction so that the Authority and the User Consultation Group can review the prototype room (including all materials, finishes, millwork, casework, furniture, services, equipment and headwalls) in its actual location within the Facility at various stages of construction, and consider whether any design adjustments are necessary:
- (A) Standard Patient Bedroom with Washroom, Vestibule/Charting Area and Supply Alcove;
 - (B) Airborne Isolation (AIR) Bedroom with Anteroom, Washroom and Supply Alcove;
 - (C) Mental health patient bedroom;
 - (D) Intensive Care Unit Bedroom Suite;

- (E) Labour/ Delivery/Recovery/Postpartum Room (LDRP);
- (F) Ambulatory Care Exam/Consult room;
- (G) Medication Room;
- (H) Clean Room;
- (I) Soiled Room;
- (J) Hybrid Operating Room;
- (K) Endoscopy / Procedure room;
- (L) Recovery Cubicle;
- (M) Emergency department – Trauma/Resuscitation Room;

Equipment (including booms and monitors) and furniture may be actual pieces or replicas, but must accurately represent the actual physical dimensions

Project Co will modify the mock-ups and prototypes as may be required as the Design develops based on feedback from the User Consultation Group and the Authority.

The purpose of the mock-ups and prototypes is to illustrate the Design. Project Co will update all Design documentation to reflect the mock-ups and prototypes, and any input from the Authority, including User Consultation Groups, and will submit all such updated Design documentation to the Authority for review under Appendix 2B [User Consultation and Design Review].

Project Co will provide a site for the mock-ups and prototypes in the City of Yellowknife unless otherwise agreed by the Authority.

5.8 Ownership of Design

With respect to ownership and property rights relating to the Design:

- (a) the Authority will not have an ownership interest in the Design, including any of the drawings or specifications prepared and produced by Project Co, the Design-Builder or any Sub-Contractor;
- (b) Project Co grants to the Authority, or will cause the Design-Builder and all Sub-Contractors to grant to the Authority, an irrevocable perpetual license giving the Authority the non-exclusive right to use the Design, including any of the documents and information listed in Section 6.25 of this Schedule:
 - (1) in connection with the Facility during and beyond the end of the Term and as long as the Facility exists, including for operational purposes during the Term and for renovations, additions and alterations to the Facility; and
 - (2) for reference purposes in connection with other operations, projects and facilities of the Authority; and
- (c) Project Co will execute and deliver, or cause to be executed and delivered, any and all further and other documents as the Authority may reasonably request to effect and record the license referred to in Section 5.7(b) of this Schedule.

5.9 Record of Adjustments to Design and Construction

The parties wish to create a single record of adjustments to the Design and Construction that are reflected in the Reviewed Drawings and Specifications, but which do not constitute Changes for which there are adjustments to payments or the Target Service Commencement Date. The adjustments include all inconsistencies with or differences from the Design and Construction Specifications, the Proposal Extracts, this Schedule 2 and any other parts of this Agreement. Project Co will maintain a list of all such adjustments, to be referred to as “Adds/Omits” or other name agreed to by the parties. Project Co will provide a copy of such list, and proposed updates to the list, together with each of the phases of Design set out in Section 5.3 above, and will modify the list for reasonable comments made by the Authority.

Upon the achievement of Service Commencement, the parties intend to agree on documentation to reflect such adjustments and may for convenience set out such adjustments in a Change Certificate. Unless otherwise agreed, at least 90 days prior to the Service Commencement Date Project Co will provide the Authority with a draft Change Report (and, if requested by the Authority, a draft markup of the Design and Construction Specifications) setting out such adjustments, without adjustments to payments or to the Service Commencement Date, and the parties will seek to agree on final documentation within 30 days after the Service Commencement Date.

5.10 Infection Prevention and Control

The Facility shall be planned and designed to be safe for all Facility Users in terms of both the prevention of health care acquired infections and the control of infectious diseases.

The Facility shall be designed to minimize the potential transmission of micro-organisms, and to provide the necessary equipment and spaces to support the use of routine infection prevention and control practices.

The Facility shall be designed and operated consistent with best practices for infection prevention and control and as per CSA Z317.3 and CSA Z8000 - 11 (7.5.1.4).

Project Co shall conduct an infection control risk assessment during the planning and Design phase of the Project and as part of the planning process for any new construction, addition, or renovation of the Facility. This risk assessment shall include consideration of the Facility’s patient population and programs. Based on the risk assessment, the Facility shall be designed to include infection prevention and control measures that minimize the potential for acquisition and transmission of infections in the health care setting.

5.11 Infection Prevention and Control Plan

In accordance with CSA Z317.3, Project Co shall develop in conjunction with the Authority, and shall comply with, an infection prevention and control plan for the Facility that includes the following (the “**Infection Prevention and Control Plan**”):

- (a) implementation of routine infection prevention and control practices for all patients regardless of the diagnosis;
- (b) appropriate spacing and placement of patients based on mode of transmission of infectious organisms, including assessment of the need for single inpatient bedrooms and airborne isolation rooms;
- (c) adequate control of patient flow through the Facility;
- (d) mechanical requirements for proper ventilation;

- (e) adequate hand hygiene facilities;
- (f) processes for proper reprocessing of medical devices and equipment;
- (g) segregation of soiled and clean items; and
- (h) Facility responses to catastrophic events.

Project Co will submit the Infection Prevention and Control Plan to the Authority in advance of the commencement of Construction activities, and will not proceed until the Infection Prevention and Control Plan has received the notation “Reviewed” under Appendix 2B [User Consultation and Design Review].

Project Co will comply with the reviewed Infection Prevention and Control Plan.

6. CONSTRUCTION AND INITIAL REMEDIATION WORK

6.1 Construction of the Facility

Project Co will perform the Construction in strict conformity with the Reviewed Drawings and Specifications, as may be modified and amended from time to time in accordance with the terms of this Agreement, and this obligation will be in addition to all other obligations of Project Co under this Agreement.

6.2 Phasing Plan

Project Co will develop a detailed phasing plan (the “**Phasing Plan**”) that:

- (a) includes the details for Project Co’s phasing of all parts of the Construction and Initial Remediation Work, including:
 - (1) all site preparation, demolition, and Construction of the Facility; and
 - (2) the requirements and timing for construction and commissioning (including all systems and equipment) for each functional area of the Facility; and
- (b) gives detailed consideration to:
 - (1) providing un-interrupted patient care throughout the Construction Period;
 - (2) maintaining existing operational functions of the Hospital;
 - (3) minimizing disruptions to Hospital operations and patient care during Construction; and
 - (4) facilitating seamless relocation of functional units from the Existing Hospital to the Facility.

The Phasing Plan may vary based on Project Co’s proposed Design.

Project Co will submit the Phasing Plan to the Authority not less than 30 days after the Effective Date and will not commence Construction until the Phasing Plan has received the notation “Reviewed” under Appendix 2B [User Consultation and Design Review].

Project Co will carry out the Construction in accordance with the reviewed Phasing Plan.

6.3 Amendments and Changes to the Drawings and Specifications

During the Construction, Project Co will submit all amendments or additions to the Reviewed Drawings and Specifications to the Authority's Design and Construction Representative for review under Appendix 2B [User Consultation and Design Review].

Any Changes during the Construction will be subject to the terms of Schedule 6 [Changes, Minor Works and Innovation Proposals].

6.4 Skilled Workers

Project Co will employ or cause the Design-Builder to employ a sufficient number of sufficiently skilled workers to perform the Construction and the Initial Remediation Work in compliance with this Agreement. Trades and other workers will be licensed or registered as required by applicable Law or Good Industry Practice.

6.5 Local Content Utilization

Subject to Section 6.4, Project Co should consider and utilize where reasonably available local suppliers, equipment and personnel to perform some or all elements of the Construction and the Initial Remediation Work. In addition, in accordance with the *Northwest Territories Manufactured Products Policy*, Project Co should utilize where reasonably available approved northern manufacturers for any products that comply with specifications and applicable codes. The *Northwest Territories Manufactured Products Policy* and the *Approved Northern Manufacturers Product List* are available online at <http://www.iti.gov.nt.ca/iea/bip/manufacture.htm>.

6.6 Control of the Construction and the Initial Remediation Work

Project Co will have total control of the Construction and the Initial Remediation Work and will effectively direct and supervise the Construction and the Initial Remediation Work so that it is undertaken in compliance with the terms of this Agreement. Project Co will be responsible for all construction means, methods, techniques, sequences and procedures with respect to the Construction and the Initial Remediation Work and for coordinating the various elements of the Construction and the Initial Remediation Work, and nothing in this Agreement (including this Schedule) will be interpreted as giving any responsibility for the above to the Authority, the Authority's Design and Construction Representative or any other representative or agent of the Authority, or to the Independent Certifier.

6.7 Existing Utilities and services

Project Co will confirm the location of, and protect:

- (a) all existing off-site utilities and services that may be affected by the Construction or the Initial Remediation Work; and
- (b) all existing on-site utilities and services that may be affected by the Construction or the Initial Remediation Work.

Project Co will relocate any existing utilities and services on the Lands and/or the Existing Hospital Lands that conflict with the Construction and/or the Initial Remediation Work.

All existing utilities and services to the surrounding Yellowknife community must remain in operation at all times with interruption only with the prior consent of the Authority's Design and Construction Representative.

6.8 Investigation of the Lands

By entering into this Agreement, Project Co will be deemed to have inspected the Lands and the Existing Hospital Lands in relation to the performance of its obligations under this Agreement and to have satisfied itself and accepted all risks and related responsibilities relating to the Lands and the Existing Hospital Lands (except as expressly provided to the contrary in this Agreement) including:

- (a) the adequacy of the rights of access to and through the Lands and the Existing Hospital Lands for the Construction;
- (b) vehicular access and parking;
- (c) traffic control and requirements for works on all roadways or public access right-of-ways;
- (d) temporary storage of building materials and equipment;
- (e) existing utilities and services on the Lands and the Existing Hospital Lands;
- (f) existing building structures to receive tie-ins;
- (g) all facilities requiring demolition and disposal;
- (h) geotechnical conditions; and
- (i) environmental protection, remediation and restoration requirements.

6.9 Hazardous Materials Report

The Authority has made available the Hazardous Materials Report for Project Co's reference, but Project Co acknowledges that the Authority makes no representation whatsoever as to the accuracy or completeness of any information in the Hazardous Materials Report.

6.10 Geotechnical and Environmental Reports

The Authority has made available the Geotechnical Reports and the Environmental Report. The Authority makes no representation whatsoever as to the accuracy or completeness of any information in the Geotechnical Reports or the Environmental Report and Project Co specifically acknowledges that the Authority assumes and accepts no responsibility that the geotechnical information, as may be available in the Geotechnical Reports or the Environmental Report, is accurate or completely describes actual site conditions including environmental, geotechnical or soil conditions (including presence of permafrost, boulders, rock, low-strength soil and voids) and ground water conditions (including presence of underground streams or water table conditions) that may affect the Design, the Construction, the Initial Remediation Work or other responsibilities of Project Co under this Agreement.

6.11 Lands

- (a) Project Co will:
 - (1) comply with the reviewed Phasing Plan;
 - (2) construct the Facility within the Lands;
 - (3) install a six foot fence around the perimeter of the active construction site and such hoarding as may be required to separate the active construction from the other portions of the Lands and the Existing Hospital Lands;

- (4) perform all Construction and Initial Remediation Work activities within the Lands and the Existing Hospital Lands except as approved by the Authority under Section 6.13 of this Schedule (a Work Plan for such Construction and/or Initial Remediation Work activity must include an adequate plan for maintaining vehicle and pedestrian access to Hospital buildings within or adjacent to the Lands and the Existing Hospital Lands, including the areas listed in Section 6.11(a)(5) below);
- (5) perform all Construction and Initial Remediation Work activities without blocking or disrupting vehicle or pedestrian access to, except as may be permitted pursuant to a Work Plan, the Existing Hospital's and/or the Facility's (as applicable):
 - (A) main entrance and drop off area;
 - (B) emergency department;
 - (C) surface parking areas; and
 - (D) delivery areas,
- (6) cause Project Co Persons and Construction and Initial Remediation Work workers and suppliers to enter or exit the Lands and the Existing Hospital Lands only at existing access routes, unless otherwise approved by the Authority;
- (7) take reasonable steps to ensure that Construction and Initial Remediation Work workers or suppliers do not:
 - (A) use any portion of the Lands or the Existing Hospital Lands for vehicular parking other than the staging area approved by the Authority; or
 - (B) smoke on any portion of the Lands or the Existing Hospital Lands;
- (8) provide a 24-hour hotline (and post the phone number in a prominent location on each of the Lands and the Existing Hospital Lands) for Authority staff, community members and passers-by to notify Project Co of any Construction or Initial Remediation Work related emergencies, and Project Co will respond to any phone calls made on the hotline within 1 hour;
- (9) provide communities with a Project Co name and number to voice concerns;
- (10) provide a community liaison officer to provide a single point of contact regarding construction and development issues;
- (11) provide a high quality colour webcam service with one or more webcams that are linked to the Authority's public website for the Project and that provide frequently refreshed high quality images showing the Construction activities on the Lands, with the Authority to provide Project Co with one or more locations reasonably required by Project Co on the Lands and/or the Existing Hospital Lands for Project Co to install cameras and supporting infrastructure and services (including internet service);
- (12) before commencing the Construction and/or the Initial Remediation Work, prepare and implement in co-operation with the Authority a construction fire safety plan for the Project, which plan will describe emergency access routes to

and from the Existing Hospital, the Facility, Lands and the Existing Hospital Lands during an emergency;

- (13) confine all Initial Remediation Work to mitigate risks to adjacent properties and the Facility; and
 - (14) locate all construction trailers, garbage chutes, garbage bins, hoists, equipment, tools and the like, within the confines of exterior hoarding.
- (b) If Project Co performs any Construction or Initial Remediation Work outside of the area designated as the Lands or the Existing Hospital Lands, Project Co will comply with all policies and other requirements of the Authority.

6.12 Demolition and Preparation of the Lands

As part of the Construction and the Initial Remediation Work, Project Co will carry out any necessary demolition and preparation of the Lands and the Existing Hospital Lands in accordance with a demolition plan (the “**Demolition Plan**”) that includes the details for Project Co’s demolition and preparation of the Lands and the Existing Hospital Lands, including:

- (a) timing of demolition activities;
- (b) security of the Lands and the Existing Hospital Lands;
- (c) safety;
- (d) traffic control;
- (e) mitigation of dust, noise, noxious odours;
- (f) handling, removal from the Lands and the Existing Hospital Lands and disposal of hazardous materials, including certification of proper disposal;
- (g) re-use of materials and recycling content;
- (h) any other matters set out in this Agreement, including the Design and Construction Specifications, as applicable to the demolition and preparation of the Lands and the Existing Hospital Lands; and
- (i) any other activities that could affect the activities of the Authority, the public or the Hospital.

Project Co will submit the Demolition Plan to the Authority in advance of the commencement of demolition activities, and will not proceed until the Demolition Plan has received the notation “Reviewed” under Appendix 2B [User Consultation and Design Review].

Project Co will comply with the reviewed Demolition Plan.

Project Co is permitted to use explosives as a general matter but will not use any explosives without the Authority’s consent as to the specific date, time and location of their use.

The title to all salvage material (including any salvage material containing Hazardous Substances) will transfer to Project Co, except:

- (j) medical equipment, which will remain the property and responsibility of Stanton Territorial Hospital; and
- (k) if the Authority otherwise elects, in which case Project Co shall make the relevant material available for collection by the Authority or its designate.

6.13 Connections and Integration to Hospital

Project Co acknowledges that the Existing Hospital will be fully operational and will provide Clinical Services at all times during Construction until the Facility Move and covenants not to interfere with such operations as contemplated in Section 4.1(A)(c) of this Agreement. The Facility must remain fully operational and able to provide Clinical Services at all times during the Initial Remediation Work. Project Co will:

- (a) co-operate with the Authority to co-ordinate any work required to connect to the Hospital to minimize the interference to the on-going operation of the Hospital, including the delivery of quality patient care;
- (b) adhere to all Authority policies and procedures relating to the Hospital established from time to time, provided that if the Authority changes any such policies or procedures, including by any amendments or additional policies or procedures after the Effective Date, and such changes are a Change or might reasonably be expected to result in an increase in Project Co's costs of performing the Design, the Construction or the Initial Remediation Work, then such changes will be made in accordance with Schedule 6 [Changes, Minor Works and Innovation Proposals]; and
- (c) at least seven days before proceeding with any proposed shutdown of Hospital services, deliver to the Authority and obtain the Authority's approval of a work plan ("**Work Plan**") clearly identifying:
 - (1) the activity that may interfere with the operation of the Hospital, including a description of the nature, timing and extent of interference;
 - (2) the steps Project Co intends to take to minimize the extent of such interference;
 - (3) the temporary measures that the Authority will be required to take to accommodate the interference; and
 - (4) any specific reporting relationships between Project Co and the staff desirable or required to coordinate the interference,

unless the Authority, at its discretion, notifies Project Co in writing that a Work Plan will not be required for particular work or a particular shutdown.

Prior to delivering a Work Plan, Project Co will consult with the Authority and, upon reasonable request, the Authority will make appropriate staff available for such consultation to determine the Work Plan that minimizes interference to the Hospital. Project Co will not proceed with any work in the Hospital or any proposed shutdown of Hospital services without

- (d) the Authority's prior written approval of a Work Plan under this Section 6.13, such approval not to be unreasonably withheld or delayed; or
- (e) advance written notice from the Authority confirming that a Work Plan is not required.

6.14 The Authority's Access to the Lands

Subject to complying with all relevant safety procedures, including any relevant health and safety plans for the carrying out of the Construction, the Initial Remediation Work and Project Co's and/or the Design-Builder's site rules, the Authority's Design and Construction Representative and its delegates and any other person designated by the Authority will have access at all reasonable times during normal working hours to:

- (a) attend the Lands and the Existing Hospital Lands and view the Construction and the Initial Remediation Work; and
- (b) subject to obtaining the consent of the relevant manufacturer or supplier (which Project Co will use all reasonable efforts to obtain), visit any site or workshop where materials, plant or equipment are being manufactured, prepared, tested or stored for use in the Construction and/or the Initial Remediation Work for the purposes of general inspection and/or of attending any test or investigation being carried out in respect of the Construction and/or the Initial Remediation Work.

The Authority's Design and Construction Representative and its delegates will have the right to attend all monthly progress meetings and site meetings, including meetings between Project Co and the Design-Builder or its Sub-Contractors.

Project Co will cooperate with the Authority to arrange for tours of the Lands and the Existing Hospital Lands at reasonable times during Construction for interested Hospital health care officials and personnel, in a way that does not interfere with the progress of the Construction.

Except as set out above or as otherwise provided for in this Agreement, the Authority will not grant any person access to the Construction Lands during the Construction Period or the Initial Remediation Work Period without the consent of Project Co, such consent not to be unreasonably withheld or delayed.

6.15 Inspection

Prior to the Target Service Commencement Date, Project Co will, upon request by the Authority's Design and Construction Representative including detailed reasons for the request, open up for inspection by the Authority's Design and Construction Representative any part of the work on the Facility which the Authority's Design and Construction Representative, acting reasonably, believes is defective and:

- (a) if the parties agree or if it is determined in accordance with the Dispute Resolution Procedure that there are no Defects in the relevant part of such work, and Project Co complied with the requirements of Section 3.6 of this Schedule, then any delay caused by the exercise of such rights will be treated as a Compensation Event and be subject to Section 8.3 of this Agreement;
- (b) if the parties agree or if it is determined in accordance with the Dispute Resolution Procedure that any relevant part of the work on the Facility is defective, then:
 - (1) Project Co will rectify and make good such Defects;
 - (2) any consequence of such rectification or making good Defects will be carried out by Project Co at no cost to the Authority; and
 - (3) Project Co will not be entitled to any extension of time to the Project Schedule in relation to such rectification and making good of such work; and

- (c) if the parties are unable to reach agreement in accordance with Sections 6.15(a) or (b) above, then the matter will, at the request of either party, be referred to the Dispute Resolution Procedure. If, in order to maintain compliance with the Project Schedule, it is necessary to proceed in respect of the matter in Dispute, the parties will proceed in accordance with the position of the Authority, provided that Project Co proceeding in accordance with the Authority's position will be a Compensation Event if the relevant matter in Dispute is determined in favour of Project Co.

6.16 Mechanics Lien Act and Builders Liens

With respect to builders liens and the requirements of the *Mechanics Lien Act* (Northwest Territories):

- (a) the Authority will not have any responsibility to be the payment certifier under any contract related to Construction or Initial Remediation Work;
- (b) Project Co will make all required builders lien holdbacks;
- (c) no builders lien holdback will be retained by the Authority under this Agreement;
- (d) if it is determined that any builders lien holdback is required to be retained by the Authority, then Project Co agrees that it is making and will make all of its required holdbacks as agent for the Authority;
- (e) Project Co will indemnify the Authority from any damages, costs, claims and expenses of any kind, including actual solicitors costs, arising from the failure of the Authority to retain a builders lien holdback; and
- (f) failure to hold back payment of amounts due to any Person in accordance with the *Mechanics Builders Lien Act* (Northwest Territories) will not constitute a Project Co Event of Default.

6.17 Safety

Project Co will be solely responsible for safety during the Construction Period and the Initial Remediation Work Period, including the safety of all persons on the Lands and the Existing Hospital Lands and any other location where the Construction or the Initial Remediation Work is performed (whether on the Lands or the Existing Hospital Lands or other location lawfully or not) and members of the public, and will comply with the requirements of applicable Laws, applicable construction safety legislation, regulations and codes and Good Industry Practice.

6.18 Protection of the Environment and Property

Project Co will:

- (a) follow all environmental protection requirements and restrictions while performing the Construction and the Initial Remediation Work;
- (b) protect the Authority's property (and any third party's property) from damage caused by the Construction or the Initial Remediation Work, including buildings, roadways, drainage systems, landscaping, surfaces, services and infrastructure; and
- (c) promptly repair any damage to property caused by Project Co in undertaking the Construction and/or the Initial Remediation Work, including any damage caused by site settlement or ground vibration.

6.19 Survey and Monitoring

Project Co will:

- (a) prior to start of any Construction or Initial Remediation Work, conduct pre-condition surveys of all buildings, residential houses and properties, infrastructure, roadways (including all underground services and installations) on the Lands and the Existing Hospital Lands and in a form and detail satisfactory to the Authority, acting reasonably, which will without limitation include field observations and photographs of existing conditions, with spot elevations by a registered surveyor at locations that will be accessible throughout and following construction for ongoing settlement monitoring, and deliver a copy of the pre-construction survey report to the Authority;
- (b) identify and monitor a list of sensitive equipment, if any, within the Existing Hospital and the Facility that may be impacted by vibrations, including for example microscopes or other measuring devices; and
- (c) conduct post-condition surveys of the spot elevations at Project milestones throughout the Construction Period and the Initial Remediation Work Period and less than one month prior to the end of the construction warranty period, to determine ongoing long-term settlement effects, and deliver monitoring surveys to the Authority in a form and detail satisfactory to the Authority, acting reasonably.

The monitoring will include monitoring of all locations identified in the Design and Construction Specifications with limitations on settlement. Project Co will appoint a registered land surveyor to carry out the settlement monitoring.

6.20 Control of Vibration

Project Co will discuss with the Authority any expected ground vibration from Project Co's Construction activities in advance of those activities (as vibration may result in damage to adjacent Hospital and residential buildings or affect existing Hospital installations, infrastructure, operations, and function of sensitive medical equipment), and without limiting the previous sentence Project Co will:

- (a) carry out its Construction and Initial Remediation Work activities so that:
 - (1) Ground vibrations from Project Co's Construction activities, including all demolition, ground improvement, and general construction activities, does not exceed 4.5 mm/s peak particle velocity when measured on any Hospital building between the hours of 7am to 5pm on Monday through Friday;
 - (2) Ground vibrations do not exceed 7.5 mm/sec peak particle velocity when measured on any Hospital building between the hours of 5pm to 8pm on Monday through Friday and between 8am to 5pm on weekends;
 - (3) Ground vibrations do not exceed 0.3 mm/s peak particle velocity when measured on the Hospital building outside the hours outlined above or during certain times of the day and certain days of the week as determined by the Authority, acting reasonably; and
 - (4) Vibration transfer to adjacent Hospital buildings does not adversely affect existing Hospital operations, including in particular diagnostic operations and equipment in the adjacent buildings.
- (b) Complete a vibration monitoring program as follows:

- (1) Project Co will engage a qualified independent third-party to complete vibration monitoring during the Construction and Initial Remediation Work activities to confirm that the vibrations caused by the Construction and Initial Remediation Work activities do not exceed the limits specified in this Section 6.20.
- (2) Project Co will undertake preliminary vibration monitoring at the Lands and the Existing Hospital Lands during the initial stages of all Construction and Initial Remediation Work activities that are expected to cause vibrations in order to determine magnitude and dissipation rate of the vibrations for each activity and provide a mitigation procedure to prevent exceeding the vibration limits specified in this Section 6.20. Project Co will complete initial vibration related Construction and Initial Remediation Work activities at a significant distance away from other Hospital buildings. The vibration monitor will provide the Authority and Project Co with a report outlining the vibration results from each Construction activity. The Authority will review the preliminary vibration monitoring report and without relieving Project Co of its responsibilities, may require Project Co to comply with additional vibration monitoring requirements for each Construction and Initial Remediation Work activity prior to commencement of the Construction or Initial Remediation Work activity.
- (3) Project Co will install vibration monitoring stations at the nearest building and at any other locations deemed sensitive because of specialized equipment, determined with the Authority. The vibration monitoring stations will be installed at each existing building corner and at the front of the nearest building. Project Co will submit typical detail of monitoring stations for the Authority's review prior to installation.
- (4) The vibration monitor will conduct vibration monitoring during all Construction and Initial Remediation Work as determined by the results of the preliminary vibration monitoring report. The third-party vibration monitor will immediately alert the Authority and Project Co if vibrations exceed the limits specified in this Section 6.20, in which case Project Co will immediately cease the activity causing the vibration.
- (5) The vibration monitor will provide the Authority and Project Co with a report no later than the 5th day of each month detailing the results of the monitoring for the previous month.

6.21 Infection Control and Control of Dust, Noise and Noxious Odours

Project Co will:

- (a) take all reasonable steps (including any specific steps reasonably required by the Authority) to minimize dust, noise and noxious odours (including diesel exhaust) from the Construction and the Initial Remediation Work (including demolition and preparation of the Lands and the Existing Hospital Lands) and to mitigate any adverse effects on the Existing Hospital and the Facility; and
- (b) without limiting Project Co's obligation under Section (a) above:
 - (1) comply with CSA Z317.13 (Infection Control during Construction, Renovation or Maintenance of Health Care Facilities), including "Preventative Measure IV", at all times during the Construction Period and the Initial Remediation Work Period; and

- (2) monitor compliance with CSA Z317.13 on a daily basis during the Construction and the Initial Remediation Work (including demolition and preparation of the Lands and the Existing Hospital Lands) and deliver to the Authority no later than the 5th day of each month, a performance report for the previous month that:
 - (A) describes the steps taken by Project Co to comply with CSA Z317.13; and
 - (B) confirms that Project Co complied with CSA Z317.13 or identifies any failure by Project Co to comply.

6.22 Signage

Project Co may erect signage on the Lands during the Construction Period and on the Existing Hospital Lands during the Initial Remediation Work Period to identify Project Co, the Design-Builder and Project Contractors, provided such signs are acceptable to the Authority's Design and Construction Representative, acting reasonably.

6.23 Temporary Works

During the Construction Period and the Initial Remediation Work Period, Project Co will:

- (a) have the sole responsibility for the design, erection, operation, maintenance and removal of temporary structures and other temporary facilities and the design and execution of construction methods required in their use; and
- (b) provide its own services necessary for Project Co's construction use, including but not limited to power, telephone, water and sewage, and will not connect directly to the Existing Hospital or Facility buildings or infrastructure except with the Authority's prior approval.

6.24 Project Meetings

Without limiting the obligations pursuant to Section 2.6 of this Schedule in respect of the Construction and Remediation Period Joint Committee, at the Authority's request, Project Co's Design and Construction Representative will attend meetings to update the Authority on the progress of Construction or Initial Remediation Work and to discuss any issues that have arisen. The meetings will be at least weekly unless agreed otherwise by the Authority.

6.25 Project Records

Notwithstanding any other provision of this Agreement:

- (a) As-Built Drawings and Specifications: Project Co will:
 - (1) throughout the Construction, update the Reviewed Drawings and Specifications (with respect to the drawings, such update will be in hard copy and an approved electronic format), including all final shop drawings, so as to produce accurate and complete as-built documents for the Facility;
 - (2) as requested from time to time during the Construction, make available such as-built drawings and specifications in hard copy and an approved electronic format to the Authority's Design and Construction Representative for review to permit the Authority's Design and Construction Representative to monitor Project Co's

compliance with the requirements of this Section and for the Authority's operational and other use; and

- (3) provide three full-size hard copies and an electronic copy of the completed as-built drawings and specifications in an approved electronic format on or before the Service Commencement Date.

Project Co will submit all electronic copies in compliance with the standards established by the Authority from time to time for electronic copies.

- (b) Maintenance Manuals: Project Co will:
 - (1) on or before the Service Commencement Date, make available all maintenance manuals, specifications, warranties and related information, in either written or electronic form, for all the equipment and systems that have been included in the Design and Construction of the Facility for review by the Authority's Design and Construction Representative; and
 - (2) organize and store such information in accordance with Schedule 14 [Records and Reports];
- (c) Design Records: Project Co will retain records of the Design process;
- (d) Minutes of Meetings: Project Co will retain minutes of all meetings between the Authority and Project Co relating to the Design, the Construction and/or the Initial Remediation Work. Project Co will circulate such minutes to the Authority's Design and Construction Representative for review and comment within the time period specified in this Agreement for the particular meeting or if no time period is specified then as soon as reasonably possible after the relevant meeting, and a reasonable period before any subsequent meeting so that all parties may consider the minutes and take required actions in advance of the subsequent meeting;
- (e) Inspection Reports and Tests Results: Project Co will retain official reports and certified test records of all inspections and tests which were undertaken as part of the Construction or the Initial Remediation Work;
- (f) Monitoring Results: Project Co will retain all survey and monitoring records obtained in connection with Section 6.19 (Survey and Monitoring);
- (g) Utility Plans: Project Co will retain utility plans for the Facility and the Lands;
- (h) Landscape Plans: Project Co will retain landscape plans for the Facility and the Lands, including irrigation plans if an irrigation system is provided;
- (i) Copies of all Permits: Project Co will retain copies of all Permits for the Construction, the Initial Remediation Work and the occupation of the Facility; and
- (j) Signed Quality Assurance Plan: Project Co will retain a signed copy of the Quality Assurance Plan for the Construction and all records of the Quality Assurance Program implemented as required by this Agreement.

7. EQUIPMENT SUPPLY AND INSTALLATION

7.1 Design and Construction Requirements

The parties will comply with Appendix 2D [Equipment and Furniture].

Without limiting Appendix 2D [Equipment and Furniture], Project Co will complete the Design and Construction to accommodate in the Facility the installation, operation, repair and maintenance of all the Equipment, including as required all electrical and plumbing connections, structural support, seismic restraints and space for efficient access, all to the tolerances and specifications as may be specified and required by the manufacturers or suppliers of the Equipment (which may be of a higher standard than specified in Schedule 3 [Design and Construction Specifications]).

Any items of equipment or systems referred to in the Design and Construction Specifications that are not specifically listed in the Equipment List referred to in Appendix 2D [Equipment and Furniture] are the sole responsibility of Project Co to be supplied and included as part of the Facility.

8. QUALITY MANAGEMENT

8.1 Quality of the Design and Construction

Project Co is solely responsible for the quality of the Design and Construction.

8.2 Quality System

Project Co acknowledges that a comprehensive Quality System is critical for the proper and timely completion of the Design and Construction and accordingly Project Co will implement and follow a Quality System.

8.3 Project Co's Quality Consultant

Project Co will retain a qualified, independent expert in quality management ("**Project Co's Quality Consultant**") to develop a Quality Assurance Program and Quality Assurance Plan in conjunction with Project Co.

8.4 Quality Assurance Program

Project Co's quality assurance program (the "**Quality Assurance Program**") will:

- (a) detail Project Co's measures required to complete all aspects of the Design and Construction pursuant to its Quality System and in accordance with the requirements of this Agreement including this Schedule 2 [Design and Construction Protocols] and Schedule 3 [Design and Construction Specifications];
- (b) address and be applicable to all aspects of the Design and Construction;
- (c) provide for a graded approach to quality in which the appropriate level of quality assurance requirements for various elements of the Design and Construction are defined;
- (d) describe or comply with the following:
 - (1) the required quality level for each process or activity involved in the Design and Construction and the means of achieving it;

- (2) the steps to ensure that everyone participating in the Design or Construction is committed to the Quality Assurance Program;
 - (3) the steps to ensure that the management and organizational structure and responsibilities are defined and understood by everyone participating in the Design or Construction;
 - (4) require that all persons participating in the Design or Construction are competent to do their required tasks and registered where applicable and required with the local authority having jurisdiction;
 - (5) require that individuals involved with the Quality Assurance Program will be held accountable for their work;
 - (6) provide that the right people will have the right information at the right time;
 - (7) provide that relevant experience for each process or activity will be sought and used;
 - (8) Design and Construction activities are planned and controlled;
 - (9) the right items, processes, and practices will be used;
 - (10) materials and services are verified to confirm that they are correct; persons giving verification will be sufficiently qualified and certified, as required and applicable, and will be independent from those who perform or install the materials or services;
 - (11) peer reviews and inspections will be performed on structured planned basis on all elements of the Design and Construction and:
 - (A) errors and deficiencies will be identified and recorded; and
 - (B) errors and deficiencies remedied or corrected and a record maintained of the remedy or correction; and
 - (12) maintain records as required by this Agreement;
- (e) provide for independent design verification in accordance with Good Industry Practice and GNWT Good Building Practice for Northern Facilities, Third Edition, 2013 (updated March 20, 2013), as amended, supplemented or replaced from time to time;
- (f) provide that professionals of record will:
- (1) carry out on-site inspections, review materials testing and inspector's reports, undertake required surveying, measuring, vibration monitoring, and verification of materials and construction methods to ensure conformance with the Reviewed Drawings and Specifications and the Design and Construction Specifications; and
 - (2) provide a letter of assurance by the coordinating professional that is an attestation that the Design and Construction has been performed in accordance with the Reviewed Drawings and Specifications and the Design and Construction Specifications.

8.5 Quality Assurance Plan

Project Co will develop a reasonable quality assurance plan (the “**Quality Assurance Plan**”) that describes the implementation of the Quality Assurance Program in accordance with the following:

- (a) Project Co will deliver to the Authority the Quality Assurance Plan not less than 20 Business Days after the Effective Date, failing which, the Authority will be entitled to make a Deduction of [REDACTED] for each week or part thereof after the date falling 20 Business Days after the Effective Date until Project Co has delivered to the Authority a preliminary draft of the Quality Assurance Plan but if Project Co has not delivered to the Authority a preliminary draft of the Quality Assurance Plan by the date falling 40 Business Days after the Effective Date, the Deduction applicable under this Section 8.5(a) will increase to [REDACTED];
- (b) the Authority will provide its comments, if any, on the preliminary draft to Project Co within 20 Business Days of receipt of the preliminary draft;
- (c) Project Co will deliver a revised draft of the Quality Assurance Plan to the Authority not less than 20 Business Days after receiving the Authority’s comments, failing which, the Authority will be entitled to make a Deduction of [REDACTED] for each week or part thereof after the date falling 20 Business Days after the Authority’s comments were received by Project Co until Project Co has delivered to the Authority a revised draft of the Quality Assurance Plan;
- (d) the Authority will, within 15 Business Days of receipt of the revised draft, advise Project Co whether the Authority accepts the Quality Assurance Plan, and if the Authority does not accept it the Authority will provide its reasons for such non-acceptance in sufficient detail to allow Project Co to address them;
- (e) if the Authority does not accept the Quality Assurance Plan, the parties will, acting reasonably, diligently work together with a view to revising the Quality Assurance Plan to address the Authority’s reasons for non-acceptance;
- (f) if the Authority has not accepted the Quality Assurance Plan by the date that is 90 Business Days after the Effective Date, Project Co may refer the dispute to the Dispute Resolution Procedure to determine whether Project Co’s proposed Quality Assurance Plan is reasonable;
- (g) any Deduction the Authority is entitled to make pursuant to Section 8.5(a) or Section 8.5(c) of this Schedule will be made from the subsequent Service Payment(s) payable to Project Co pursuant to Schedule 8 [Payments]; and
- (h) Deductions made pursuant to this Section 8.5 will not be counted for the purposes of Sections 11.1 or 12.1(h) of this Agreement or Sections 6.7 or 6.8 of Schedule 4 [Services Protocols and Specifications].

Project Co will promptly implement and strictly comply with the Quality Assurance Plan developed under this Section.

8.6 Reporting

Within 5 Business Days of the end of each month during the Construction Period, Project Co will deliver to the Authority a monthly report of the Quality Assurance Plan prepared by Project Co’s Quality Consultant covering all aspects of the Design and Construction completed in the reporting period that are relevant to the Quality Assurance Plan. Project Co will highlight any deficiencies identified and corrective

actions taken to address such deficiencies during the period covered by such report. The report will include all supporting documentation including field reviews, photographs, reports and other material.

8.7 Quality Review by the Authority

The Authority may, at its discretion, perform its own audits of the Quality Assurance Program and for that purpose Project Co will make available for review by the Authority, upon request from the Authority, all records of the Quality Assurance Program and the Quality Assurance Plan.

9. WORKERS COMPENSATION

9.1 Evidence of *Safety Act* and *Worker's Compensation Act* Compliance

Project Co will provide evidence, satisfactory to the Authority's Design and Construction Representative, of compliance by Project Co and all Project Contractors with the requirements of the *Safety Act* (Northwest Territories) and the *Worker's Compensation Act* (Northwest Territories) as amended, and all regulations and successor legislation thereto, including payments due thereunder at the following times:

- (a) prior to commencing the Construction; and
- (b) at any time during Construction or Initial Remediation Work, upon request of the Authority's Design and Construction Representative acting reasonably.

9.2 Indemnity for *Safety Act* and *Worker's Compensation Act* Non-Compliance

If Project Co or anyone employed by or through Project Co in the performance of any Construction or Initial Remediation Work does not comply with the requirements of the *Safety Act* (Northwest Territories) and the *Worker's Compensation Act* (Northwest Territories), as amended, and all regulations and successor legislation thereto, including payment and deduction and remittance of any and all contributions, fees, assessments and charges required to be made pursuant to the above, Project Co will indemnify the Authority from any cost, loss, liability or obligation which the Authority may incur as a result.

9.3 Principal Contractor

For the purposes of applicable legislation and regulations, Project Co agrees to be, or will cause the Design-Builder to be, at all times in respect of the Facility, during the Construction Period, and the Existing Hospital, during the Existing Hospital Works Period, the principal contractor for the Project for the purposes of the *Safety Act* (Northwest Territories) and accordingly will comply, or will cause to be complied, with all resulting requirements and obligations including:

- (a) ensuring continuing coordination of the occupational health and safety activities of all employers on the Lands during the Construction Period and the Existing Hospital Lands during the Initial Remediation Work Period, including the Authority, the Authority's Design and Construction Representative, any other contractors and everyone engaged by or through any of them;
- (b) delivering any notices as required by applicable regulations; and
- (c) complying with the obligations of a principal contractor for a multi-employer workplace as prescribed by the applicable regulations.

If for any reason the *Safety Act* (Northwest Territories) refuses to recognize Project Co or the Design-Builder as the principal contractor then, to the extent permitted by law, Project Co will cooperate with the Authority and perform on behalf of the Authority the obligations which the Authority is required to

undertake as principal contractor in connection with the Construction and the Initial Remediation Work by virtue of the *Safety Act* (Northwest Territories) and regulations, or other statutes.

9.4 Failure to Comply with Safety Act (Northwest Territories) Requirements

If at any time the Construction or the Initial Remediation Work is stopped because Project Co, or any Project Co Person providing services or work on the Project, unreasonably fails or refuses to comply with an order issued pursuant to the *Safety Act* (Northwest Territories), then such failure or refusal will be considered a Project Co Material Breach.

10. PROJECT SCHEDULE AND SCHEDULING

10.1 Initial Project Schedule

Attached as Appendix 2E [Initial Project Schedule] is the initial project schedule (the “**Project Schedule**”), which the parties have relied upon in entering into this Agreement.

10.2 Project Schedule Updates

Project Co will, as required from time to time until the Service Commencement Date, but no less than once per calendar month by the 15th day of each month, in consultation with the Authority update the Project Schedule so that it is at all times an accurate, reasonable and realistic representation of Project Co’s plans for the completion of the Design and Construction of the Facility and the Initial Remediation Work in accordance with the requirements of this Agreement. The updates will include:

- (a) adjustments resulting from Supervening Events and Changes, if any, as permitted by this Agreement;
- (b) as the Design progresses, best estimates of:
 - (1) the start and completion dates for the Design phases described in Section 5.4(b) of this Schedule;
 - (2) the commencement of Construction;
 - (3) the planned start and completion dates of the major activities of Construction;
 - (4) the planned start and completion dates of the Facility Move;
 - (5) the commencement of Initial Remediation Work;
 - (6) the planned start and completion dates of the major activities of Initial Remediation Work; and
 - (7) the planned start and end dates of any proposed shut-down of Hospital services; and
- (c) the Target Service Commencement Date, which may not be updated or otherwise changed within 12 months of such date unless the Authority, in its discretion, consents;

Project Co will deliver an updated Project Schedule monthly to the Authority and the Independent Certifier and upon delivery the updated Project Schedule (the “**Updated Project Schedule**”) will be the Project Schedule under this Agreement in substitution for the previously issued Project Schedule. If at any time the Authority does not agree with the proposed updates that may be required to the Project Schedule then the disagreement may be referred to the Dispute Resolution Procedure.

10.3 Failure to Update Project Schedule

If Project Co fails or refuses to deliver an Updated Project Schedule as required under Section 10.2 of this Schedule, then such failure or refusal will be deemed to be a Project Co Material Breach.

10.4 Compliance with Project Schedule

Project Co will undertake the Design and Construction of the Facility and the Initial Remediation Work in compliance with the Updated Project Schedule, as may be updated pursuant to this Agreement.

10.5 Move-In Schedules

Project Co acknowledges that the Authority will rely on the Target Service Commencement Date as set out in the Project Schedule (as may be adjusted under Section 10.2 of this Schedule).

As soon as reasonably practicable, but in any event no later than 120 Business Days prior to the Target Service Commencement Date, Project Co will deliver to the Authority's Design and Construction Representative a move-in schedule in respect of the Facility (the "**Facility Move-in Schedule**") indicating the anticipated dates when certain areas will become available for occupation by the Authority so as to facilitate and permit the Authority to progressively take up occupation in an efficient manner.

The Authority's Design and Construction Representative will advise Project Co of any key or significant moves or move-in requirements, and Project Co will, as reasonably possible, accommodate the Authority's requirements and requests. Project Co will, as may be required from time to time, up-date the Facility Move-in Schedule.

11. DELAYS AND ACCELERATION

11.1 Acceleration to Recover Project Co Delays

If at any time the Authority, acting reasonably, determines that Project Co is behind the Updated Project Schedule and will not achieve Service Commencement by the Target Service Commencement Date, then the Authority may deliver notice to Project Co's Design and Construction Representative to use its best efforts, at Project Co's own cost and at no cost to the Authority or detriment to quality of workmanship, to accelerate the Construction so as to conform to the Updated Project Schedule and achieve Service Commencement by the Target Service Commencement Date.

11.2 Acceleration to Advance Service Commencement

Without prejudice to the Authority's rights under Section 11.1 of this Schedule, if at any time the Authority determines that it requires the Construction to proceed in advance of the Updated Project Schedule then the Authority may give written notice to Project Co to provide the Authority with a written proposal to accelerate the Construction, including cost estimates and an estimate of the time saved. If the Authority acting reasonably decides to proceed with the acceleration then:

- (a) the Authority will notify Project Co in writing;
- (b) Project Co will implement the directed acceleration in accordance with its proposal;
- (c) the Authority will reimburse Project Co for costs that were described in Project Co's proposal and reasonably incurred by Project Co (but not for any other costs); and
- (d) if the acceleration involves a Change (other than to the Updated Project Schedule) then such Change will be made in accordance with Schedule 6 [Changes, Minor Works and Innovation Proposals].

12. COMMISSIONING

12.1 Testing and Commissioning

Project Co will, prior to applying for a Certificate of Service Commencement, retain a qualified independent commissioning agent (who is neither a Project Co Person nor an Affiliate of a Project Co Person; and who is acceptable to the Authority, acting reasonably), to test and commission all equipment (including Equipment on the Equipment List) and systems in the Facility to demonstrate to the Authority's Design and Construction Representative that the Facility equipment and systems, including all major systems, are operating so that the Authority may occupy the Facility for its Intended Uses and the Availability Conditions are satisfied for all Functional Units. The commissioning agent will prepare a written report to confirm the foregoing and completion of the commissioning activities scheduled in the Commissioning Plan to be completed before Service Commencement. Testing and commissioning will include the following:

- (a) a complete and successful demonstration in real time under full stress conditions for all equipment and systems that require or are provided with redundancy or spare capacity;
- (b) end to end testing and commissioning of key equipment and systems including but not limited to all medical Equipment, MDR Equipment, diagnostic imaging Equipment, communication systems (nurse call, vocera, intercom, overhead paging, telephones) and door controls; and
- (c) testing and commissioning will have clinical validation of proper function of equipment and systems and all points of integration between equipment and systems.

12.2 Equipment and Systems Operation and Training

Project Co will be knowledgeable on the proper use and maintenance of all equipment and systems Project Co installs in the Facility, including all equipment and systems described in the Design and Construction Specifications and any other communication systems, and will provide sufficient training and education to the Authority staff to enable the Authority to properly utilize such equipment and systems, including any training and education with respect to Equipment required under Appendix 2D [Equipment and Furniture]. The Authority will identify the relevant Authority staff and make such staff available for training at reasonable times before the Service Commencement Date. All training will be completed before the Service Commencement Date unless agreed by the Authority, acting reasonably. Training may take place after the Service Commencement Date if required by the Authority, or at the request of Project Co with the consent of the Authority, acting reasonably.

12.3 Commissioning Plan

Project Co will prepare and deliver to the Authority's Design and Construction Representative and the Independent Certifier a detailed plan (the "**Commissioning Plan**") setting out the testing, commissioning, training and other activities Project Co intends to carry out to satisfy Sections 12.1, 12.2 and 12.3 of this Schedule and to achieve Service Commencement, including:

- (a) a description of the specific equipment and systems to be tested and commissioned and the associated commissioning requirements, including those to be completed before Service Commencement;
- (b) supporting documentation, including as appropriate:
 - (1) design calculations and/or assumptions;
 - (2) manufacturer's specifications;

- (3) identification of all equipment and systems that require or are provided with redundancy or spare capacity and that will include complete successful demonstration in real time under full stress conditions;
 - (4) identification of post-disaster requirements and protocols for all equipment and systems to be commissioned;
 - (5) a description of all systems which will be tested and commissioned for integration to other systems; and
 - (6) a description of all systems and equipment where the Authority's clinical staff will be required to develop functional scenarios and to test and witness these functional scenarios;
- (c) a description of the training and education that Project Co intends to provide to the Authority's staff to enable the Authority to properly utilize the equipment and systems installed in the Facility, including all training and education to be completed before Service Commencement;
 - (d) the name of the commissioning agent and the names of other persons to be involved in testing, commissioning and training;
 - (e) a description of Project Co's system for managing records of tests, inspections, quality assurance and training;
 - (f) a general description of Project Co's transition plans for handover to the Authority of the Facility at the Service Commencement Date;
 - (g) a schedule, related to the Project Schedule, showing:
 - (1) the timing of all testing and commissioning and training;
 - (2) for each requirement of Service Commencement (described in Schedule 1 [Definitions and Interpretation]), the date upon which Project Co anticipates achieving the requirement;
 - (3) a matrix of all equipment and systems, including all integrated Equipment and systems, and how they integrate with each other, along with an overview of the procedures that will be followed to demonstrate that integration of all equipment and systems has been and will be achieved; and
 - (4) the timing and development of the functional scenarios with the Authority's clinical staff.

The Commissioning Plan must be reasonable having regard to the requirements of Sections 12.1, 12.2 and 12.3 of this Schedule and will be developed and finalized as follows:

- (h) Project Co will deliver a preliminary draft of the Commissioning Plan to the Authority not less than 12 months before each Target Service Commencement Date, failing which, the Authority will be entitled to make a Deduction of ██████ for each week or part thereof after the date falling 12 months before the Target Service Commencement Date until Project Co has delivered to the Authority a preliminary draft of the Commissioning Plan but if Project Co has not delivered to the Authority a preliminary draft of the Commissioning Plan by the date falling 9 months before the Target Service

Commencement Date, the Deduction applicable under this Section 12.3(h) will increase to [REDACTED];

- (i) the Authority will provide its comments, if any, on the preliminary draft to Project Co within 20 Business Days of receipt of the preliminary draft;
- (j) Project Co will deliver a revised draft of the Commissioning Plan to the Authority not less than 40 Business Days after receipt of the Authority's comments on the preliminary draft, failing which, the Authority will be entitled to make a Deduction of [REDACTED] for each week or part thereof after the date falling 40 Business Days after the Authority's comments were received by Project Co until Project Co has delivered to the Authority a revised draft of the Commissioning Plan;
- (k) the Authority will, within 15 Business Days of receipt of the revised draft, advise Project Co whether the Authority accepts the Commissioning Plan, and if the Authority does not accept it the Authority will provide its reasons for such non-acceptance in sufficient detail to allow Project Co to address them;
- (l) if the Authority does not accept the Commissioning Plan, the parties will, acting reasonably, diligently work together with a view to revising the Commissioning Plan to address the Authority's reasons for non-acceptance;
- (m) if the Authority has not accepted the Commissioning Plan by the date that is 6 months before the Target Service Commencement Date, Project Co may refer the Dispute to the Dispute Resolution Procedure to determine whether Project Co's proposed Commissioning Plan is reasonable;
- (n) any Deduction the Authority is entitled to make pursuant to Section 12.3(h) or Section 12.3(j) of this Schedule will be made from the subsequent Service Payment(s) payable to Project Co pursuant to Schedule 8 [Payments]; and
- (o) Deductions made pursuant to this Section 12.3 will not be counted for the purposes of Sections 11.1 or 12.1(h) of this Agreement or Sections 6.7 or 6.8 of Schedule 4 [Services Protocols and Specifications].

12.4 Move Plan

Project Co will prepare and deliver to the Authority's Design and Construction Representative a detailed plan (the "**Move Plan**") setting out the coordination, planning, preparation, relocation, installation, testing, commissioning, training and other activities Project Co will carry out to satisfy Section 5 of Appendix 2D [Equipment and Furniture], including:

- (a) a description of the specific Equipment and office and wall-mounted items to be disconnected, removed, relocated, installed, tested and commissioned and the associated commissioning requirements;
- (b) supporting documentation, including as appropriate:
 - (1) design calculations and/or assumptions;
 - (2) manufacturer's specifications;
 - (3) identification of all equipment and systems that require or are provided with redundancy or spare capacity and that will include complete successful demonstration in real time under full stress conditions; and

- (4) identification of post-disaster requirements and protocols for all equipment and systems to be commissioned;
- (c) the name of the specialized healthcare equipment relocater and the commissioning agent and the names of other persons to be involved in relocation, installation, testing, commissioning and training;
- (d) a description of Project Co's system for managing records of installation, tests, commissioning, inspections, quality assurance and training;
- (e) a general description of Project Co's relocation plans and any other transition plans required in order to coordinate the move, installation and commissioning of relocated Equipment and office and wall-mounted items to the Facility;
- (f) a schedule, related to the Project Schedule, showing:
 - (1) the timing of all planning, disconnecting, removal, moving, installation, testing and commissioning and training;
 - (2) a matrix of all equipment and systems, including all integrated Equipment and systems, and how they integrate with each other, along with an overview of the procedures that will be followed to demonstrate that integration of all Equipment and systems has been and will be achieved; and
 - (3) the Move Plan and schedule must be developed in consultation with the Authority and in consideration to minimize any clinical operational impacts;
- (g) Project Co will deliver a preliminary draft of the Move Plan to the Authority not less than 12 months before the Target Service Commencement Date, failing which, the Authority will be entitled to make a Deduction of ██████ for each week or part thereof after the date falling 12 months before the Target Service Commencement Date until Project Co has delivered to the Authority a preliminary draft of the Commissioning Plan, but if Project Co has not delivered to the Authority a preliminary draft of the Commissioning Plan by the date falling 9 months before the Target Service Commencement Date, the Deduction applicable under this Section 12.4(g) will increase to ██████;
- (h) the Authority will provide its comments, if any, on the preliminary draft to Project Co within 20 Business Days of receipt of the preliminary draft;
- (i) Project Co will deliver a revised draft of the Move Plan to the Authority not less than 40 Business Days after receipt of the Authority's comments on the preliminary draft, failing which, the Authority will be entitled to make a Deduction of ██████ for each week or part thereof after the date falling 40 Business Days after the Authority's comments were received by Project Co until Project Co has delivered to the Authority a revised draft of the Move Plan;
- (j) the Authority will, within 15 Business Days of receipt of the revised draft, advise Project Co whether the Authority accepts the Move Plan, and if the Authority does not accept it the Authority will provide its reasons for such non-acceptance in sufficient detail to allow Project Co to address them;
- (k) if the Authority does not accept the Move Plan, the parties will, acting reasonably, diligently work together with a view to revising the Move Plan to address the Authority's reasons for non-acceptance;

- (l) if the Authority has not accepted the Move Plan by the date that is 6 months before the Target Service Commencement Date, Project Co may refer the Dispute to the Dispute Resolution Procedure to determine whether Project Co's proposed Move Plan is reasonable;
- (m) any Deduction the Authority is entitled to make pursuant to Section 12.4(g) or Section 12.4(i) of this Schedule will be made from the first Service Payment payable to Project Co pursuant to Schedule 8 [Payments]; and
- (n) Deductions made pursuant to this Section 12.4 will not be counted for the purposes of Sections 11.1 or 12.1(h) of this Agreement or Sections 6.7 or 6.8 of Schedule 4 [Services Protocols and Specifications].

The Move Plan must be reasonable having regard to the requirement of this Schedule and will be developed and finalized as part of the Commissioning Plan.

13. COMPLETION

13.1 Deficiency List

Prior to and as a condition of issuance of a Certificate of Service Commencement, Project Co will, in cooperation with the Authority's Design and Construction Representative and the Independent Certifier, prepare a complete list of Defects that are apparent upon inspection of the Facility at that time (the "**Service Commencement Deficiencies**") and deliver to the Authority's Design and Construction Representative the list of Service Commencement Deficiencies.

Subject to the right of Project Co to refer matters to the Dispute Resolution Procedure as set out below, the list of Service Commencement Deficiencies will include all items required by the Authority to be included on such list.

The Authority or Project Co may refer matters relating to the accuracy or completeness of the list of Service Commencement Deficiencies to the Dispute Resolution Procedure.

In an attempt to keep the "Service Commencement Deficiencies" list to a minimum, Project Co will develop a deficiency program and tracking system established in advance of any areas or rooms being complete. As each room or area becomes complete, there will be a review completed and a deficiency item list created. Project Co will distribute this list to any parties that are responsible for any defective work, and have an assigned date by which the deficiency must be corrected. This will be monitored and updated regularly as the Facility progresses towards completion.

13.2 Advance Notice of Application for Service Commencement

Project Co acknowledges that the Independent Certifier will need sufficient time to complete any inspections, consult with the Authority, and consider the list of Service Commencement Deficiencies, and accordingly Project Co will:

- (a) at least 20 Business Days (but no more than 40 Business Days) before the Target Service Commencement Date, deliver to the Independent Certifier and the Authority's Design and Construction Representative a notice setting out:
 - (1) a description of all outstanding Design and Construction to be completed by Project Co prior to Service Commencement; and
 - (2) the list of Service Commencement Deficiencies; and

- (b) assist the Independent Certifier to make any advance inspections requested by the Independent Certifier.

13.3 Application for Certificate of Service Commencement

If Project Co believes it has achieved the requirements for Service Commencement and complied with Section 13.2, then Project Co may apply to the Independent Certifier (with a copy to the Authority's Design and Construction Representative) for a Certificate of Service Commencement. No later than 5 Business Days after application by Project Co for a Certificate of Service Commencement, the parties will require the Independent Certifier to, in cooperation with Project Co's Design and Construction Representative and the Authority's Design and Construction Representative, make an inspection of the Facility, review the basis for Project Co's application for Service Commencement, and then within a further 5 Business Days, with respect to an application for a Certificate of Service Commencement:

- (a) if Service Commencement has been achieved, issue a certificate indicating that Service Commencement has been achieved (a "**Certificate of Service Commencement**"), together with comments on the list of Service Commencement Deficiencies (if any); or
- (b) if Service Commencement has not been achieved, provide Project Co and the Authority's Design and Construction Representative with a list of all incomplete Design and Construction that must be completed prior to Service Commencement.

A Certificate of Service Commencement issued by the Independent Certifier will be final and not referable to the Dispute Resolution Procedure or otherwise subject to dispute between the parties.

13.4 Correction of Deficiencies

Upon issuance of a Certificate of Service Commencement, Project Co will proceed expeditiously to correct each Service Commencement Deficiency by the date that is 20 Business Days after the Service Commencement Date with respect to the Service Commencement Deficiencies, or such later date as may be reasonably required to provide sufficient time to correct the Deficiency and that is agreed by the Authority, acting reasonably (each Deficiency having its own "**Service Commencement Deficiency Deadline**"). Each Service Commencement Deficiency which has not been fully corrected by its Service Commencement Deficiency Deadline will be deemed (without the requirement for any further action by the Authority) to have generated a Demand Maintenance request on that day and thereafter the applicable provisions of this Agreement, including applicable Rectification Periods and Deductions, will apply to each such deemed request. Nothing in this Section 13 limits Project Co's responsibilities for correction of Defects or Deficiencies that are identified after the preparation of the list of Service Commencement Deficiencies.

APPENDIX 2A

INDEPENDENT CERTIFIER AGREEMENT

APPENDIX 2A

INDEPENDENT CERTIFIER AGREEMENT

THIS AGREEMENT is made as of the 22nd day of September, 2015

AMONG:

The Government of the Northwest Territories

(the “**Authority**”)

AND:

Boreal Health Partnership

(“**Project Co**”)

AND:

BTY Consultancy Group Inc.

(the “**Independent Certifier**”)

WHEREAS:

- A. the Authority and Project Co have entered into the Project Agreement;
- B. the Authority and Project Co wish to appoint the Independent Certifier, and the Independent Certifier wishes to accept such appointment, to perform certain services in connection with the Project Agreement; and
- C. the Authority, Project Co and the Independent Certifier wish to enter into this Agreement in order to record the terms by which the Independent Certifier will perform such services.

NOW THEREFORE in consideration of the mutual promises and agreements of the Authority, Project Co and the Independent Certifier herein expressed and for other good and valuable consideration the receipt and sufficiency of which are hereby acknowledged, the Authority, Project Co and the Independent Certifier covenant and agree as follows:

1. DEFINITIONS

1.1 Definitions

In this Agreement including the recitals and Schedules, unless the context indicates a contrary intention, terms which are defined in the Project Agreement (and not otherwise defined in this Agreement) will have meanings given to them in the Project Agreement and the following terms will have the following meanings:

“Agreement” means this Independent Certifier Agreement and its schedules;

“Fee” means the fees payable by the PA Parties to the Independent Certifier for the Functions, as such fees are specified and made payable in Schedule 2 [Fee];

“Functions” means:

- (a) all of the functions and obligations conferred on the Independent Certifier under the Project Agreement;
- (b) all of the functions and obligations conferred on the Independent Certifier under this Agreement, including the functions described in Schedule 1 [Functions]; and
- (c) all other things or tasks which the Independent Certifier is required to do to comply with its obligations under this Agreement;

“Functions Variation” means any change to the Functions;

“PA Parties” means, collectively, the Authority and Project Co;

“Project Agreement” means that certain agreement entitled “Project Agreement” and made between the Authority and Project Co as of the 22 day of September, 2015 with respect to the design, construction, financing, operation, maintenance and life cycle rehabilitation for the Facility, as the same may be amended, supplemented or replaced from time to time; and

“Project Material” means all material:

- (a) provided to the Independent Certifier or created by or required to be created by any PA Party; and
- (b) provided by or created by or required to be created by the Independent Certifier as part of, or for the purpose of, performing the Functions,

including documents, equipment, reports, technical information, plans, charts, drawings, calculations, tables, schedules and data (stored and recorded by any means).

2. INTERPRETATION

2.1 Interpretation

The division of this Agreement into Sections, the insertion of headings and the provision of a table of contents are for convenience only, do not form a part of this Agreement and will not be used to affect the construction or interpretation of this Agreement. The word “including” will not be construed as limiting the general term or statement immediately preceding. Unless otherwise specified:

- (a) each reference in this Agreement to **“Section”** and **“Schedule”** is to a Section of, and a Schedule to, this Agreement;

- (b) each reference to a statute is deemed to be a reference to that statute and any successor statute, and to the regulations made under that statute and any successor statute, as amended or re-enacted from time to time;
- (c) words importing the singular include the plural and vice versa and words importing gender include all genders;
- (d) references to time of day or date mean the local time or date in Yellowknife, Northwest Territories;
- (e) all references to amounts of money mean lawful currency of Canada; and
- (f) an accounting term has the meaning assigned to it, and all accounting matters will be determined, in accordance with IFRS consistently applied.

2.2 Obligations and Exercise of Rights by the PA Parties

The obligations of the PA Parties under this Agreement will be several. Except as specifically provided for in this Agreement, the rights of the PA Parties under this Agreement will be jointly exercised by each of the PA Parties.

3. ROLE OF THE INDEPENDENT CERTIFIER

3.1 Engagement

The PA Parties hereby appoint the Independent Certifier, and the Independent Certifier hereby accepts such appointment, to carry out the Functions in accordance with this Agreement. The Independent Certifier will perform the Functions in accordance with this Agreement.

3.2 Acknowledgement by Independent Certifier

The Independent Certifier hereby acknowledges in favour of the PA Parties that it has received a copy of the Project Agreement and that it has received notice of Section 46 of the *Financial Administration Act* (Northwest Territories).

3.3 Standard of Care

The Independent Certifier will exercise the standard and skill, care and diligence in the performance of the Functions that would be expected of an expert professional experienced in providing services in the nature of the Functions for projects similar to the Project.

3.4 Duty of Independent Judgment

In exercising the Functions, the Independent Certifier will act:

- (a) impartially, honestly and independently;
- (b) reasonably and professionally; and

- (c) in a timely manner:
 - (1) in accordance with the times prescribed in this Agreement or the Project Agreement, as applicable; or
 - (2) where no times are prescribed, within 5 Business Days or such earlier time so as to enable the PA Parties to perform their respective obligations under the Project Agreement.

Although the Independent Certifier should take account of any opinions or representations made by the PA Parties, the Independent Certifier will not be bound to comply with any opinions or representations made by either of them in connection with any matter on which the Independent Certifier is required to exercise its professional judgment.

The Independent Certifier acknowledges that, as set out under the Project Agreement, the Independent Certifier's certifications will be final and binding on the PA Parties in respect of the issuance of the Certificate of Service Commencement, and that the Independent Certifier will use its best skill and judgment in providing the Functions and making any certifications. A PA Party may dispute any other decision made by the Independent Certifier, including any list of Deficiencies or list of incomplete Design and Construction that must be completed prior to Service Commencement.

3.5 Authority to Act

The Independent Certifier:

- (a) is an independent consultant and is not, and will not purport to be, a partner, joint venturer or agent of any PA Party;
- (b) other than as may be expressly set out in the Project Agreement, has no authority to give any directions to a PA Party or its officers, employees, contractors, consultants or agents; and
- (c) has no authority to waive or alter any terms of the Project Agreement, nor to discharge or release a PA Party from any of its obligations under the Project Agreement unless jointly agreed in writing by the PA Parties.

3.6 Knowledge of the PA Parties' Requirements

The Independent Certifier warrants that:

- (a) it has and will be deemed to have informed itself fully of the requirements of the Project Agreement;
- (b) it will inform itself fully of the requirements of such other documents and materials as may become relevant from time to time to the performance of the Functions;

- (c) without limiting Sections 3.6(a) or 3.6(b), it has and will be deemed to have informed itself fully of all time limits and other requirements for any Function which the Independent Certifier carries out under the Project Agreement and this Agreement;
- (d) it has and will be deemed to have informed itself fully of the nature of the work necessary for the performance of the Functions and the means of access to and facilities at the Existing Hospital, the Facility, the Lands and the Existing Hospital Lands, including restrictions on any such access or protocols that are required; and
- (e) it has satisfied itself as to the correctness and sufficiency of its proposal for the Functions and that the Fee covers the cost of complying with all of the obligations under this Agreement and of all matters and things necessary for the due and proper performance and completion of the Functions.

3.7 Co-ordination by Independent Certifier

The Independent Certifier will:

- (a) fully co-operate with the PA Parties;
- (b) carefully co-ordinate the Functions with the work and services performed by the PA Parties;
- (c) without limiting its obligations under Sections 3.4 and 3.7(b), perform the Functions so as to avoid unreasonably interfering with, disrupting or delaying the work and services performed by the PA Parties; and
- (d) provide copies to all PA Parties of all reports, communications, certificates and other documentation that it provides to any PA Party.

3.8 Conflict of Interest

The Independent Certifier warrants that:

- (a) at the date of signing this Agreement, no conflict of interest exists or is likely to arise in the performance of its obligations under this Agreement; and
- (b) if, during the term of this Agreement, any such conflict or risk of conflict of interest arises, the Independent Certifier will notify the PA Parties immediately in writing of that conflict or risk of conflict and take such steps as may be required by each of the PA Parties to avoid or mitigate that conflict or risk.

3.9 Independent Certifier Personnel

- (a) Subject to Section 3.9(b), the Independent Certifier will use the partners, directors or employees described in Schedule 3 [Independent Certifier Personnel] of this Agreement in connection with the performance of the Functions and such persons' services will be available for so long as may be necessary to ensure the proper performance by the

Independent Certifier of the Functions. Such persons will have full authority to act on behalf of the Independent Certifier for all purposes in connection with this Agreement.

- (b) None of the persons listed in Schedule 3 [Independent Certifier Personnel] will be removed or replaced unless he/she ceases to work as a partner in or director or employee of the Independent Certifier or he/she is unable to work because of death or illness. The Independent Certifier will notify the PA Parties of any such circumstances and will be responsible for finding a replacement who will previously have been approved in writing by the PA Parties.

4. ROLE OF THE PA PARTIES

4.1 Assistance

The PA Parties agree to co-operate with and provide reasonable assistance to the Independent Certifier to familiarize the Independent Certifier with all necessary aspects of the Project to enable the Independent Certifier to carry out its obligations under this Agreement.

4.2 Instructions in Writing

All instructions to the Independent Certifier by the PA Parties will be given in writing.

4.3 Information and Services

The PA Parties will each make available to the Independent Certifier, as soon as practicable from time to time, all information, documents and particulars necessary for the Independent Certifier to carry out the Functions, including such information, documents and particulars required in order for the Independent Certifier to determine whether the criteria for Service Commencement have been achieved, and will provide copies of all such information, documents and particulars to the other PA Party.

4.4 Additional Information

If any information, documents or particulars are reasonably required to enable the Independent Certifier to perform the Functions and have not been provided by Project Co or the Authority, as the case may be, then:

- (a) the Independent Certifier will give notice in writing to Project Co's Design and Construction Representative or the Authority's Design and Construction Representative, as the case may be, of the details of the information, documents or particulars demonstrating the need and the reasons why they are required; and
- (b) Project Co or the Authority, as the case may be, will arrange the provision of the required information, documents or particulars.

4.5 Right to Enter and Inspect

Upon giving reasonable notice to Project Co's Design and Construction Representative, the Independent Certifier (and any person authorized by it) may enter and inspect the Lands, the Existing Hospital Lands,

the Existing Hospital, the Facility and work in progress at any reasonable time in connection with the exercise or proposed exercise of rights under this Agreement, subject to:

- (a) observance of the reasonable rules of Project Co as to safety and security for the Lands, the Existing Hospital Lands, the Existing Hospital, the Facility and work in progress;
- (b) not causing unreasonable delay to the carrying out of the Construction by reason of its presence at the Lands, the Existing Hospital Lands, the Existing Hospital or the Facility; and
- (c) not causing any damage to the Lands, the Existing Hospital Lands, the Existing Hospital, the Facility or work in progress.

4.6 PA Parties Not Relieved

Neither PA Party will be relieved from performing or observing its obligations, or from any other liabilities, under the Project Agreement as a result of either the appointment of, or any act or omission by, the Independent Certifier.

4.7 PA Parties not Liable

On no account will a PA Party be liable to another PA Party for any act or omission by the Independent Certifier whether under or purportedly under a provision of the Project Agreement, this Agreement or otherwise, provided that any such act or omission will not extinguish, relieve, limit or qualify the nature or extent of any right or remedy of either PA Party against or any obligation or liability of either PA Party to the other PA Party which would have existed regardless of such act or omission.

5. SUSPENSION

5.1 Notice

The Functions (or any part) may be suspended at any time by the PA Parties:

- (a) if the Independent Certifier fails to comply with its obligations under this Agreement, immediately by the PA Parties giving joint notice in writing to the Independent Certifier; or
- (b) in any other case, by the PA Parties giving 5 Business Days joint notice in writing to the Independent Certifier.

5.2 Costs of Suspension

The Independent Certifier will:

- (a) subject to the Independent Certifier complying with Section 8, be entitled to recover the extra costs incurred by the Independent Certifier by reason of a suspension directed under Section 5.1(b) valued as a Functions Variation under Section 8; and

- (b) have no entitlement to be paid any costs, expenses, losses or damages arising from a suspension under Section 5.1(a).

5.3 Recommencement

The Independent Certifier will immediately recommence the carrying out of the Functions (or any part) on receipt of a joint written notice from the PA Parties requiring it to do so.

6. INSURANCE AND LIABILITY

6.1 Independent Certifier's Professional Indemnity Insurance

- (a) The Independent Certifier will, at its cost, have in place:
 - (1) professional errors and omissions insurance:
 - (A) in the amount of [REDACTED] per claim and in the aggregate, a deductible of not more than [REDACTED] per claim and from an insurer and on terms satisfactory to each of the PA Parties;
 - (B) with a term and extended reporting period from the date of this Agreement until the expiration of 2 years from the cessation of the Functions; and
 - (C) covering liability which the Independent Certifier might incur as a result of a breach by it of its obligations or any breach of a duty owed by the Independent Certifier in a professional capacity to the PA Parties, or either of them, under or in connection with this Agreement or the provision of the Functions; and
 - (2) at all times during the term of this Agreement, comprehensive general liability insurance in the amount of [REDACTED] per claim and in the aggregate, no deductible for personal injury or bodily injury, a deductible of not more than [REDACTED] per occurrence for property damage, naming the Authority as an additional insured and from an insurer and on terms satisfactory to each of the PA Parties.
- (b) The Independent Certifier will:
 - (1) ensure that each of the insurance policies described in Section 6.1(a):
 - (A) bears an endorsement to the effect that the insurer will not effect any adverse material change or amendment to the policy or any cancellation of the policy without first giving at least 30 Business Days prior written notice by registered mail to the Authority; and
 - (B) is obtained and maintained with reputable and Qualified Insurers licensed in the Northwest Territories; and

- (2) provide copies of each of the insurance policies described in Section 6.1(a) to each of the PA Parties upon request.

6.2 Workers' Compensation Insurance

The Independent Certifier will, at its own cost and at all times during the term of this Agreement, insure its liability (including its common law liability) as required under any applicable workers compensation statute or regulation in relation to its employees engaged in the Functions.

7. PAYMENT FOR SERVICES

7.1 Fee

- (a) In consideration of the Independent Certifier performing the Functions in accordance with this Agreement, the PA Parties will pay the Independent Certifier the Fee.
- (b) The Fee includes all taxes (except for GST), disbursements and expenses (including accommodation, car rental, equipment and travel expenses), overheads and profit to perform the Functions.

7.2 Payment of Fee

- (a) The PA Parties will each pay half the Fee to the Independent Certifier in accordance with the payment schedule specified in Schedule 2 [Fee]. The obligation on Project Co and the Authority to each pay half of the Fee to the Independent Certifier is not subject to joint and severable liability and neither the Authority nor Project Co will have any liability whatsoever for the non-payment by the other of any fees or costs payable by such other party under this Agreement.
- (b) Project Co acknowledges and agrees that if any amount due and payable by Project Co to the Independent Certifier is outstanding, the Independent Certifier will not have any obligation to Project Co to make any certification under the Project Agreement.

8. FUNCTIONS VARIATIONS

8.1 Notice of Functions Variation

- (a) If the Independent Certifier believes, other than a "Functions Variation Order" under Section 8.3, that any direction by the PA Parties constitutes or involves a Functions Variation it will:
 - (1) within 5 Business Days after receiving the direction and before commencing work on the subject matter of the direction, give notice to the PA Parties that it considers that the direction constitutes or involves a Functions Variation; and
 - (2) within 15 Business Days after giving the notice under Section 8.1(a)(1), submit a written claim to each of the Authority's Design and Construction Representative and Project Co's Design and Construction Representative which includes

detailed particulars of the claim, the amount of the claim and how it was calculated.

- (b) Regardless of whether the Independent Certifier considers that such a direction constitutes or involves a Functions Variation, the Independent Certifier will continue to perform the Functions in accordance with this Agreement and all directions, including any direction in respect of which notice has been given under this Section.

8.2 No Adjustment

If the Independent Certifier fails to comply with Section 8.1, the Fee will not be adjusted as a result of the relevant direction.

8.3 Functions Variation Procedure

- (a) The Authority's and Project Co's Design and Construction Representatives may jointly issue a document titled "Functions Variation Price Request" to the Independent Certifier which will set out details of a proposed Functions Variation which the PA Parties are considering.
- (b) Within 7 Business Days after the receipt of a "Functions Variation Price Request", the Independent Certifier will provide each of the Authority's and Project Co's Design and Construction Representatives with a written notice in which the Independent Certifier sets out the effect which the proposed Functions Variation will have on the Fee.
- (c) Each of the Authority's and Project Co's Design and Construction Representatives may then jointly direct the Independent Certifier to carry out a Functions Variation by written document titled "Functions Variation Order" which will state either that:
 - (1) the Fee is adjusted as set out in the Independent Certifier's notice; or
 - (2) the adjustment (if any) to the Fee will be determined under Section 8.4.

8.4 Cost of Functions Variation

- (a) Subject to Section 8.2, the Fee will be adjusted for all Functions Variations or suspensions under Section 5.1(b) carried out by the Independent Certifier by:
 - (1) the amount (if any) stated in the "Functions Variation Order" in accordance with Section 8.3(c);
 - (2) if Section 8.4(a)(1) is not applicable, an amount determined pursuant to the fee schedule for Functions Variations in Schedule 2 [Fee]; or
 - (3) where such rates or prices are not applicable, a reasonable amount to be agreed between the PA Parties and the Independent Certifier or, failing agreement, determined by the Authority's and Project Co's Design and Construction Representatives jointly, acting reasonably.

- (b) Any reductions in the Fee will be calculated on the same basis as any increases.

9. TERM AND TERMINATION

9.1 Term

Subject to earlier termination, this Agreement will commence on the date first written above and continue in full force until:

- (a) 45 Business Days after the Service Commencement Date; or
- (b) such later date as may be mutually agreed between the PA Parties and the Independent Certifier.

9.2 Notice of Breach

If the Independent Certifier commits a breach of this Agreement, the PA Parties may give written notice to the Independent Certifier:

- (a) specifying the breach; and
- (b) directing its rectification in the period specified in the notice being a period not less than 5 Business Days from the date of service of the notice.

9.3 Termination for Breach

If the Independent Certifier fails to rectify the breach within the period specified in the notice issued under Section 9.2, the PA Parties may, without prejudice to any other rights of the PA Parties or either of them, immediately terminate this Agreement.

9.4 Termination for Financial Difficulty

The PA Parties may, without prejudice to any other rights which the PA Parties or either of them may have, terminate this Agreement immediately if:

- (a) events have occurred or circumstances exist which, in the opinion of the PA Parties, may result in or have resulted in insolvency or the control of the Independent Certifier passing to another body or corporation; or
- (b) the Independent Certifier has communications with its creditors with a view to entering into, or enters into, any form of compromise, arrangement or moratorium of any debts whether formal or informal, with its creditors.

9.5 Termination for Convenience

Notwithstanding anything to the contrary in this Agreement, the PA Parties may at any time terminate this Agreement upon 30 days written notice to the Independent Certifier.

9.6 Independent Certifier's Rights upon Termination for Convenience

Upon a termination under Section 9.5, the Independent Certifier will:

- (a) be entitled to be reimbursed by the PA Parties for the value of the Functions performed by it to the date of termination; and
- (b) not be entitled to any damages or other compensation in respect of the termination and (without limitation) any amount in respect of:
 - (1) the lost opportunity to earn a profit in respect of the Functions not performed at the date of termination; and
 - (2) any lost opportunity to recover overheads from the turnover which would have been generated under this Agreement but for it being terminated.

9.7 Procedure upon Termination

Upon completion of the Independent Certifier's engagement under this Agreement or earlier termination of this Agreement (whether under Sections 9.3, 9.4 or 9.5 or otherwise) the Independent Certifier will:

- (a) co-operate with the PA Parties;
- (b) hand to the PA Parties all Project Material and all other information concerning the Project held or prepared by the Independent Certifier; and
- (c) as and when required by the PA Parties, meet with them and such other persons nominated by them with a view to providing them with sufficient information to enable the PA Parties to execute the Project or the persons nominated to provide the Functions.

9.8 Effect of Termination

Except as otherwise expressly provided in this Agreement, termination of this Agreement will be without prejudice to any accrued rights and obligations under this Agreement as at the date of termination (including the right of Project Co and the Authority to recover damages from the Independent Certifier).

9.9 Survival

Termination of this Agreement will not affect the continuing rights and obligations of Project Co or the Authority and the Independent Certifier under Sections 6, 7, 9.6, 9.7, 9.8, 10, 11.7, 11.8 and this Section 9.9 or under any other Section which is expressed to survive termination or which is required to give effect to such termination or the consequences of such termination.

10. INDEMNITY

10.1 Indemnity

The Independent Certifier will indemnify and save harmless the PA Parties, and each of them, and their respective employees, agents, officers and directors from and against any and all losses incurred or suffered by any of them by reason of, resulting from, in connection with, or arising out of:

- (a) the breach of any representation, warranty, covenant, term, duty or obligation of the Independent Certifier set out in or arising under this Agreement or the Project Agreement; or
- (b) any act or omission of the Independent Certifier in connection with the subject matters of this Agreement.

11. GENERAL

11.1 Entire Agreement

This Agreement and the Project Agreement constitute the entire agreement between the PA Parties and the Independent Certifier and supersede all communications, arrangements and agreements, either oral, written, made or entered into prior to the date of this Agreement between the PA Parties and the Independent Certifier with respect to the subject matter of this Agreement.

11.2 Negation of Employment

- (a) The Independent Certifier, its officers, employees, servants and agents and any other persons engaged by the Independent Certifier in the performance of the Functions will not by virtue of this Agreement or the performance of the Functions become in the service or employment of the PA Parties for any purpose.
- (b) The Independent Certifier will be responsible for all matters requisite as employer or otherwise in relation to such officers, employees, servants and agents and other persons who are engaged by the Independent Certifier.

11.3 Waiver

Failure by any PA Party or the Independent Certifier to enforce a provision of this Agreement will not be construed as a waiver by that PA Party or the Independent Certifier of any right in respect of that provision, or any other provisions of this Agreement.

11.4 Notices

Any document which is to be or may be issued or given to or served upon Project Co, the Authority or the Independent Certifier under this Agreement will be deemed to have been sufficiently issued or given to or served if:

- (a) it is delivered or sent by commercial courier, upon receipt;

(b) if delivered by electronic mail during business hours (and in any event, at or before 3:00 pm local time in the place of receipt) on a Business Day, upon receipt, and if not delivered during business hours, upon the commencement of business hours on the next Business Day provided that:

- (1) the receiving party has, by electronic mail or by hand delivery, acknowledged to the notifying party that it has received such notice; or
- (2) within 24 hours after sending the notice, the notifying party has also delivered a copy of such notice to the receiving party by hand delivery,

11.5 Transfer and Assignment

- (a) The Independent Certifier:
- (1) will not assign, transfer, mortgage, charge or encumber any right or obligation under this Agreement without the prior written consent of the PA Parties, which each PA Party may give or withhold in its absolute discretion; and
 - (2) agrees that any assignment, transfer, mortgage, charge or encumbrance will not operate to release or discharge the Independent Certifier from any obligation or liability under this Agreement.
- (b) For the purposes of this Section, an assignment will be deemed to have occurred where there is a Change In Control of the Independent Certifier after the date of this Agreement.
- (c) Each of the PA Parties may assign, transfer, mortgage, charge or encumber any right or obligation under this Agreement in accordance with the terms of the Project Agreement.

11.6 Governing Laws and Attornment

This Agreement will be governed by and construed in accordance with the laws of the Northwest Territories and the federal laws of Canada applicable therein without regard to conflicts of law principles that would apply a different body of law, and the Authority, Project Co and the Independent Certifier hereby irrevocably submit and attorn to the exclusive jurisdiction of the courts of the Northwest Territories and all courts competent to hear appeals therefrom with respect to any action, suit, proceeding or dispute in connection with this Agreement.

11.7 Confidentiality

- (a) The Independent Certifier will ensure that:
- (1) neither it nor any of its officers, employees, servants and agents disclose, or otherwise make public, any Project Material or any other information or material acquired in connection with or during the performance of the Functions without prior written approval of the PA Parties; and

- (2) no Project Material is used, copied, supplied or reproduced for any purpose other than for the performance of the Functions under this Agreement.
- (b) The PA Parties may at any time require the Independent Certifier to give and to arrange for its officers, employees, servants and agents engaged in the performance of the Functions to give written undertakings, in the form of confidentiality agreements on terms required by the PA Parties, relating to the non-disclosure of confidential information, in which case the Independent Certifier will promptly arrange for such agreements to be executed and delivered.

11.8 Project Material

- (a) The PA Parties and the Independent Certifier agree that the Independent Certifier does not and will not have any rights, including any Intellectual Property, in any Project Material provided to the Independent Certifier or created or required to be created by any PA Party.
- (b) All title and ownership, including all Intellectual Property, in and to the Project Material created or required to be created by the Independent Certifier as part of, or for the purposes of performing the Functions, is hereby assigned jointly to the Authority and Project Co on creation, or where such title, ownership and Intellectual Property cannot be assigned before creation of the Project Material, it will be assigned to the Authority and Project Co on creation. In addition, to the extent that copyright may subsist in such Project Material so created by the Independent Certifier, the Independent Certifier hereby waives all past, present and future moral rights therein and the Independent Certifier will ensure that any agent or employee of Independent Certifier will have waived all such moral rights.
- (c) The Independent Certifier will do all such things and execute all such documents as reasonably requested by either of the PA Parties in order to confirm or perfect the assignment of Intellectual Property in the Project Material referred to in Section 11.8(b).

11.9 Time of the Essence

Time will be of the essence of this Agreement and of the transactions contemplated by this Agreement.

11.10 Amendment

No change or modification of this Agreement will be valid unless it is in writing and signed by each party to this Agreement.

11.11 Severability

If any provision of this Agreement will be declared invalid, unenforceable or illegal by the courts of any jurisdiction to which it is subject, such provision may be severed and such invalidity, unenforceability or illegality will not prejudice or affect the validity, enforceability or legality of the remaining provisions of this Agreement.

11.12 Enurement

Subject to the restrictions on transfer contained in this Agreement, this Agreement will enure to the benefit of and be binding on the parties and their respective heirs, executors, administrators, successors and assigns.

11.13 Counterparts

This Agreement may be executed in any number of counterparts and all counterparts taken together will constitute one and the same instrument.

IN WITNESS WHEREOF the Authority, Project Co and the Independent Certifier have executed this Agreement.

Title:

SCHEDULE 1

FUNCTIONS

The Independent Certifier will, subject to the provisions of the Project Agreement, provide the services as set out below. In the event of a conflict between any provision of this Agreement, including this Schedule 1, and a provision of the Project Agreement, the Project Agreement will prevail.

- (a) The Independent Certifier will:
- (1) consult with the Design-Builder and others involved in the Design;
 - (2) conduct inspections of the Construction; and
 - (3) conduct inspections of the Initial Remediation Work,
- as the Independent Certifier determines is required for purposes of the Independent Certifier's functions under the Project Agreement and, no later than the 10th Business Day of each month, prepare and deliver to the Authority and Project Co a monthly written report containing a description of:
- (4) the Design and Construction and, if applicable, Initial Remediation Work completed in the previous month; and
 - (5) the progress of the Design and Construction and, if applicable, Initial Remediation Work relative to the Updated Project Schedule, with an overview analysis of any variances; and
 - (6) a description of any elements of the Facility that for any reason vary from the requirements of the Project Agreement, with particular reference to Schedule 2 [Design and Construction Protocols] and Schedule 3 [Design and Construction Specifications] of the Project Agreement.
- (b) The Independent Certifier will provide payment certification services in respect of the Design-Build Agreement and Sub-Contracts for parts of the Construction. This includes certifying completion of Sub-Contracts for progressive release of lien holdbacks as permitted under the *Mechanics Lien Act* (Northwest Territories).
- (c) The Independent Certifier will, in cooperation with Project Co's Design and Construction Representative and the Authority's Design and Construction Representative with respect to an application for a Certificate of Service Commencement, review and comment on the list of Service Commencement Deficiencies.
- (d) No later than 5 Business Days after application by Project Co for a Certificate of Service Commencement, the Independent Certifier will, in cooperation with Project Co's Design and Construction Representative and the Authority's Design and Construction Representative, make an inspection of the Facility, review the basis for Project Co's

application for Service Commencement, and then within a further 5 Business Days after such inspection and review:

- (1) if Service Commencement has been achieved, issue a Certificate of Service Commencement, together with comments on the list of Service Commencement Deficiencies (if any) and attaching a copy of the list of Service Commencement Deficiencies; or
 - (2) if Service Commencement has not been achieved, provide Project Co and the Authority's Design and Construction Representative with a list of all incomplete Design and Construction that must be completed prior to Service Commencement.
- (e) During the Initial Remediation Work Period, the Independent Certifier will provide certification services in respect of the Initial Remediation Work and, in accordance with the principles of Schedule 2 [Design and Construction Protocols] of the Project Agreement, will certify that the Initial Remediation Work has been substantially performed for the purposes of the *Mechanics Lien Act* (Northwest Territories).
- (f) During the Operating Period, the Independent Certifier will verify whether Project Co has obtained Fair Market Rates for all work, equipment and materials required to implement a Change in accordance with Schedule 6 [Changes].

SCHEDULE 2

FEE

Category	Cost (\$)
Upfront Project Review & Orientation	■

APPENDIX 2B

USER CONSULTATION AND DESIGN REVIEW

1 SUBMITTALS

Except as expressly set out otherwise in this Agreement, the provisions of this Appendix 2B will apply to any and all drawings, specifications or other documents (“**Submittals**”) required or specified by this Agreement, including Section 5.4 (Design Process) of Schedule 2 [Design and Construction Protocols], in respect of the Design and the Construction to be submitted to, reviewed, accepted or otherwise processed by the Authority prior to Service Commencement or after Service Commencement in respect of the completion of Deficiencies, including any and all subsequent revisions, amendments and changes thereto.

1.1 SUBMITTAL SCHEDULE

- 1.1.1 The schedule for Submittals (the “**Submittal Schedule**”) is attached as Attachment 1 to this Appendix. The Submittal Schedule may be amended by agreement of the parties in accordance with the terms of this Section 1.1.
- 1.1.2 Any amendment to the Submittal Schedule will provide for a progressive and orderly flow of Submittals from Project Co to the Authority as appropriate to allow sufficient time for review of each Submittal by the Authority, taking into account both the resources necessary to be available to the Authority to conduct such review (as anticipated by or inferred from the Submittal Schedule attached as Attachment 1 to this Appendix) and consultation with the User Consultation Groups.
- 1.1.3 Unless a longer period is required by this Agreement or is otherwise reasonably required by the Authority, the Authority will have 15 Business Days for review of a Submittal from the date the Authority received the Submittal. If the Submittal Schedule is inconsistent with the foregoing review period then it will be deemed to be amended to be consistent. If the Authority receives a Submittal after 12pm (Pacific time) on a Business Day, the 15 Business Day review period will commence on the next Business Day.
- 1.1.4 Project Co will, in scheduling Submittals and consultations with the User Consultation Group, and in the performance of the Design and the Construction, allow adequate time prior to performing the Design and the Construction that is the subject of the Submittals, for review of the Submittals by the Authority and the User Consultation Group as applicable, and for Project Co to make changes to the Submittals, the Design and the Construction as may be required to account for any comments received from the Authority and the User Consultation Group.
- 1.1.5 If the Submittal Schedule indicates that a large number of Submittals will be made at one time, the Authority may, acting reasonably, request a longer period for review or a staggering of the Submittals, and Project Co will, acting reasonably, revise the Submittal Schedule accordingly, taking into account both the availability of resources required by the Authority to conduct such review and the availability of the User Consultation Groups and whether delay in the review of the subject matter of the Submittal will have a material impact on Project Co’s ability to progress future anticipated Submittals and the Design or Construction in accordance with the Project Schedule.
- 1.1.6 Project Co will submit the then current Submittal Schedule to the Authority on a monthly basis until the Service Commencement Date. All amended Submittal Schedules will be required to meet all the requirements of this Section 1.1.
- 1.1.7 Project Co will submit all Submittals to the Authority in accordance with the then current Submittal Schedule.
- 1.1.8 Project Co will bear the risk of delays and additional costs caused as a result of the late submission of Submittals to the Authority, by Submittals which are rejected or required to be corrected and re-submitted in accordance with the terms of this Appendix 2B, or by changes in the Design and Construction required as a result of comments made pursuant to this Appendix 2B.

1.2 GENERAL REQUIREMENTS FOR SUBMITTALS

1.2.1 Unless otherwise specified by the Authority, Project Co will:

1.2.1.1 deliver 5 printed copies of each Submittal to the Authority, together with electronic copies as follows:

1.2.1.1.(1) submit two dimensional drawings in both Autodesk Design Review 'DWF' and Adobe Reader 'PDF' format; and

1.2.1.1.(2) submit the three dimensional combined model referred to in Section 5.5 (Building Information Modeling) of Schedule 2 in NavisWorks Freedom 'NWD'

1.2.1.1.(3) e-transmit the detached 3D models (Project Co will advise the Authority before the first Submittal which format Project Co will be using and then will use that format at all times during the Project.);

1.2.1.2 post an electronic copy of each Submittal (in a format acceptable to the Authority) on an internet-based system that is established by Project Co for the Project and accessible to Authority staff.

1.2.2 All Submittals will be in English.

1.2.3 All Submittals required by this Agreement, by applicable Law or Good Industry Practice to be signed or sealed by persons with professional designations (including where applicable by registered professional architects or engineers) will be so signed and, where applicable, sealed.

1.2.4 All Submittals will refer to the relevant provisions of the Design and Construction Specifications, the Services Protocols and Specifications (if applicable) and to any matter that has previously been subject to review. All Submittals (or covering documentation delivered with the Submittals) will include a statement confirming that the Submittals comply with, or identifying any elements of the Facility that for any reason vary from, the requirements of the Project Agreement, with particular reference to Schedule 2 [Design and Construction Protocols] and Schedule 3 [Design and Construction Specifications].

1.2.5 All Submittals will be clearly identified as a Submittal and will be delivered with appropriate covering documentation, which will include:

1.2.5.1 a list of all attached Submittals;

1.2.5.2 a description of:

1.2.5.2.(1) the purpose of the Submittal(s) (including whether the Submittal is being submitted for review by the User Consultation Group for review under Section 1.4 (Review Procedure) of this Appendix or for other purposes);

1.2.5.2.(2) the specific item or items in the Submittal that is subject to review by the Authority or the User Consultation Group; and

1.2.5.2.(3) Project Co's expectations for the Authority's review of the Submittal and Project Co's proposed course of action relating to the Submittal and the Design and the Construction that are the subject of the Submittal;

1.2.5.3 if the Submittal is submitted as part of the Design phases described in Section 5.4 (Design Process) of Schedule 2 [Design and Construction Protocols], a report for the Submittal including the information described in Section 5.4.(c).10 of Schedule 2 as applicable to that Submittal;

1.2.5.4 for each Submittal:

- 1.2.5.4.(1) the document number(s) or drawing number(s);
- 1.2.5.4.(2) revision numbers (if applicable);
- 1.2.5.4.(3) document or drawing title(s);
- 1.2.5.4.(4) name of entity that prepared the Submittal;
- 1.2.5.4.(5) the Submittal history showing date and delivery information and/or log number of all previous submissions of that Submittal; and
- 1.2.5.4.(6) identification of any previous Submittal superseded by the current Submittal.

1.2.6 Project Co will compile and maintain a register of the date, contents and status of the submission of all Submittals, including the date of receipt and content of all returned Submittals and comments thereon.

1.3 USER CONSULTATION PROTOCOL

- 1.3.1 Project Co acknowledges that review of the Design by the Authority and consultation with the Facility Users is an essential step in the completion of the detailed design of the Facility. Accordingly, Project Co will conduct consultations with the User Consultation Groups as described in this Appendix 2B. The Authority will make reasonable efforts, as requested by Project Co, to assist and support Project Co with the consultation process, but nothing in this Section 1.3 (User Consultation Protocol) will be interpreted to give the Authority responsibility for the Design, the Design schedule or the user consultation process.
- 1.3.2 The Authority will establish User Consultation Groups that may include clinical Facility Users (such as physicians and nurses) and technical Facility Users (such as staff from the following Authority departments: facility planning, information management and information technology, security, infection control, ergonomics, logistics, housekeeping, food services, laundry, foundation, switchboard, fire, ambulance, RCMP, the City and staff from various departments who will be responsible for the various types of Equipment included in the Facility). The Authority may also from time to time include patients, families and neighbours in the user consultation process. *[Note: Refer Attachment 2 to this Appendix.]*
- 1.3.3 Unless agreed by the Authority, all aspects of the Design will be subject to review by one or more User Consultation Groups.
- 1.3.4 The User Consultation Groups will include a User Consultation Group designated as the “**Core User Group**” with responsibility for coordinating the Design review process with Project Co.
- 1.3.5 Unless otherwise agreed, Submittals will be provided and reviewed in accordance with the following:
- 1.3.5.1 Draft Submittal to the Authority:
- 1.3.5.1.(1) Project Co will provide a draft Submittal as indicated on the Submittal Schedule that includes all relevant material with a covering transmittal indicating the purpose of the Submittal, and the information that should be reviewed by the Authority and the User Consultation Groups.
- 1.3.5.1.(2) All changes from a previous Submittal should be clearly indicated in accordance with Section 1.10 (Revisions) of this Appendix 2B.
- 1.3.5.2 User Group Consultation:
- 1.3.5.2.(1) One week following the draft Submittal, Project Co will present the relevant material at a meeting of the relevant User Consultation Group(s).
- 1.3.5.2.(2) The presentation will be made in person by the Architect or, if the Authority agrees, the Design-Builder’s engineer or other subject matter expert.
- 1.3.5.2.(3) Project Co’s presentation will include a page-by-page review of the draft Submittal.
- 1.3.5.2.(4) Project Co, the Design-Builder and a representative of the Service Provider must be in attendance, preferably in person but teleconference is acceptable.

- 1.3.5.2.(5) During the presentation, a representative of Project Co will take “live minutes” so that all parties can agree on the content of the minutes during the meeting. Project Co will circulate the minutes immediately after the meeting to all parties and within 3 Business Days Project Co must circulate formal minutes for review. If the Authority notifies Project Co of any errors in the minutes, Project Co will correct such errors within 3 Business Days of the Authority’s notice.
- 1.3.5.3 Informal Comments from the Authority:
- 1.3.5.3.(1) The Authority will provide any informal feedback through to Project Co.
- 1.3.5.3.(2) The Authority will provide additional informal feedback within one week after the presentation, unless the Authority advises Project Co in writing. The period will not exceed two weeks unless agreed with Project Co.
- 1.3.5.4 Formal Submittal to the Authority:
- 1.3.5.4.(1) Project Co will make the formal Submittal within two weeks following the presentation (or one week after receiving additional informal feedback).
- 1.3.5.4.(2) If Project Co does not address the feedback received at the presentation or subsequently provided by the Authority in accordance with Section 1.3.5.3.(2), Project Co will provide commentary on the reasons for not addressing the feedback.
- 1.3.5.5 Formal Response from the Authority:
- 1.3.5.5.(1) The Authority will respond within 15 Business Days following the formal Submittal in accordance with this Appendix 2B.
- 1.3.5.6 The process set out in this Section 1.3 (User Consultation Protocol) will be set out in the Submittal Schedule.
- 1.3.5.7 The parties acknowledge that Design development is an iterative and interactive process and that additional User Consultation Group review and meetings may be required from those shown on the Submittal Schedule. The parties will co-operate to amend the Submittal Schedule as may be required from time to time to ensure that sufficient consultations with the User Consultation Group in relation to each component of the Design (and changes to the Design resulting from such consultations) are completed prior to Project Co making the formal Submittal.
- 1.3.5.8 The Authority and Project Co will not be bound by the consultations with the User Consultation Groups, unless reflected in the formal Submittal and comments from the Authority.
- 1.3.5.9 If Project Co considers that compliance with any comment raised by a User Consultation Group member would lead to a Change, Project Co will, before taking into account such comment or objection, notify the Authority. If it is agreed by the Authority that such comments or objections would lead to a Change then the procedure as detailed in Schedule 6 [Changes, Minor Works and Innovation Proposals] will apply. In all cases, the parties will cooperate to identify potential alternative solutions to any comments or objections raised that would not lead to a Change.

1.3.5.10 The User Consultation Group consultation meetings will be held in Yellowknife, NWT.

1.4 **REVIEW PROCEDURE**

1.4.1 The Authority will review and respond to each Submittal in accordance with the applicable time periods set out in the Submittal Schedule (as may be amended from time to time in accordance with this Appendix).

1.4.2 Before commencing Construction of a particular component of the Project, Project Co will submit to the Authority a Submittal:

1.4.2.1 that fully addresses the User Group Consultation described in Section 1.3 (User Consultation Protocol) of this Appendix; and

1.4.2.2 describing that component, including all necessary Design and other information as the Authority may reasonably require, including any Design reports and calculations, reasonably necessary for the Authority to conduct an appropriate review to confirm that the Design described in the Submittal conforms to the requirements of this Agreement (including the Design and Construction Specifications and the Proposal Extracts (Design and Construction)).

1.4.3 Each time before Project Co submits a Submittal or package of Submittals to the Authority under Section 1.4.2 above, Project Co will meet with the Authority and make a presentation to the Authority regarding the content and purpose of the Submittal(s), carry out a page-by-page review of the Submittal(s) with the Authority and answer any questions the Authority may have in advance of its review.

1.4.4 The Authority will review Submittals submitted under Section 1.4.2 above and assign one of the following 4 comments:

1.4.4.1 "CORRECT DEFICIENCIES";

1.4.4.2 "REJECTED";

1.4.4.3 "NOT REVIEWED"; or

1.4.4.4 "REVIEWED"

1.4.5 The comment "REVIEWED" will be assigned to those Submittals that, in the opinion of the Authority, acting reasonably, appear to conform to the requirements of this Agreement, including the Design and Construction Specifications and the Proposal Extracts (Design and Construction).

- 1.4.6 The comment “CORRECT DEFICIENCIES” will be assigned to those Submittals that, in the opinion of the Authority, acting reasonably, appear to generally conform to the requirements of this Agreement, but in which minor deficiencies have been found and identified by the Authority’s review. Project Co will to the extent necessary correct these Submittals and provide a copy of such corrected Submittals to the Authority within 15 Business Days. Project Co may proceed on the portions of such Submittals that have not received comments but Project Co will not proceed on the portions of such Submittals that have received the comment “CORRECT DEFICIENCIES” until Project Co obtains a comment that permits Project Co to proceed. Project Co will correct, revise and resubmit Submittals as often as may be required to obtain a comment that permits Project Co to proceed. If at any time it is discovered that Project Co has not corrected the deficiencies on Submittals that were correctly stamped "CORRECT DEFICIENCIES", then Project Co will be required to modify the Submittals and the relevant Design and the Construction as required to correct the deficiencies and Project Co may be required, at the Authority’s discretion, acting reasonably, to resubmit relevant Submittals.
- 1.4.7 The comment “REJECTED” will be assigned to those Submittals that, in the opinion of the Authority, acting reasonably, contain significant deficiencies or do not generally conform with the requirements of this Agreement. Project Co will correct and re-submit these Submittals within 15 Business Days after the comment has been provided to Project Co. The Authority will then review such corrected Submittals and assign a comment to the corrected Submittal. Project Co will correct, revise and resubmit Submittals as often as may be required to obtain a comment that permits Project Co to proceed. Except with the written consent of the Authority, Project Co will not proceed with any Design or Construction to which such Submittals receiving the comment “REJECTED” relate until Project Co obtains a comment that permits Project Co to proceed.
- 1.4.8 The comment “NOT REVIEWED” may be assigned to those Submittals that have not been reviewed by the Authority in detail because, in the opinion of the Authority, acting reasonably, the Submittals do not comply with the requirements of this Appendix (including Section 1.4.2 above), are incomplete or otherwise insufficient for the purposes of a Design review, or are received by the Authority before the date scheduled in the Submittal Schedule. Project Co will correct and re-submit these Submittals within 15 Business Days or, if a later date is set out on the Submittal Schedule, by such later date. Project Co will correct, revise and resubmit Submittals as often as may be required to obtain a comment that permits Project Co to proceed. Project Co will not proceed with any Design or Construction to which such Submittals receiving the comment “NOT REVIEWED” relate until Project Co obtains a comment that permits Project Co to proceed.
- 1.4.9 The Authority may request additional time for the review of any Submittal, including where the Submittal is voluminous or requires extensive review by representatives (including consultants) of the Authority, and Project Co will, in consultation with the Authority, extend such time for any reasonable requests by the Authority.
- 1.4.10 If the Authority does not respond to a Submittal within the applicable time period for that Submittal as determined in accordance with Section 1.1.3 of this Appendix, the Submittal will be deemed “REVIEWED” and Project Co may proceed with and implement the Design and the Construction on the basis set forth in the applicable Submittal without any further action or documentation required.
- 1.4.11 Where the Authority issues the comment “CORRECT DEFICIENCIES”, “REJECTED” or “NOT REVIEWED” the Authority will provide reasons for the comment, referencing particulars of the Section(s) of the Agreement (including the Design and Construction Specifications) that the Submittal fails to satisfy, and if requested by Project Co, the Authority will meet with Project Co to discuss the reasons for the comment.

- 1.4.12 If at any time after assigning any comment to a Submittal or where Section 1.4.10 above has applied, the Authority or Project Co discovers deficiencies or any failure to conform to the requirements of this Agreement, the Authority or Project Co, as the case may be, will promptly notify the other party of such deficiencies or non-conformance and the Authority may revise the comment assigned to any Submittal. If the parties agree or it is determined in accordance with the Dispute Resolution Procedure that the revised comment is correct, Project Co will make all such corrections to the Submittals and the Design and the Construction.
- 1.4.13 For the purpose of facilitating and expediting the review and correction of Submittals, the Authority and Project Co's Design and Construction Representatives will meet as may be mutually agreed to discuss and review any outstanding Submittals and any comments thereon.
- 1.4.14 Where an individual Submittal item is voluminous, the Authority at its discretion may elect to stamp only the cover page or first sheet of the Submittal with the appropriate comment, if any, and return to Project Co the cover page or first page together with individual pages or sheets on which comments are made, together with an explanation of the status of all pages not returned to Project Co. Any pages not returned without such an explanation as to their status will be deemed to be "REVIEWED" by the Authority.
- 1.4.15 In lieu of returning a Submittal, the Authority may by letter notify Project Co of the comment assigned to the Submittal and if such comment is "CORRECT DEFICIENCIES", "REJECTED", or "NOT REVIEWED" the letter will contain comments in sufficient detail, including referencing applicable Section(s) of the Agreement, for Project Co to identify the correction sought.

1.5 **REVIEWED DRAWINGS AND SPECIFICATIONS**

- 1.5.1 The following Submittals will be deemed to be "**Reviewed Drawings and Specifications**":
- 1.5.1.1 Submittals which the Authority has marked as "REVIEWED" under Section 1.4.5 of this Appendix;
 - 1.5.1.2 portions of Submittals that Project Co may proceed with under Section 1.4.6 of this Appendix;
 - 1.5.1.3 Submittals which have been deemed "REVIEWED" by the Authority under Section 1.4.10 of this Appendix.
- 1.5.2 Project Co's Design and Construction Representative will deliver promptly one complete copy of the Reviewed Drawings and Specifications to the Independent Certifier.

1.6 **DISPUTES**

- 1.6.1 If Project Co disputes any comment issued by the Authority in respect of a Submittal made under Section 1.3 (User Consultation Protocol) of this Appendix, Project Co will promptly notify the Authority of the details of such Dispute and will submit the reasons why Project Co believes a different comment should be assigned, together with appropriate supporting documentation. The Authority will review the Submittal, the reasons and supporting documentation and within 7 Business Days after receipt thereof will either confirm the original comment or notify Project Co of a revised comment. Nothing in this Section 1.6 will limit either party's right to refer a Dispute to the Dispute Resolution Procedure.

1.7 **CHANGES**

1.7.1 If Project Co considers that compliance with any comment raised by the Authority in respect of a Submittal made under Section 1 of this Appendix would lead to a Change, Project Co will, before taking into account such comment, notify the Authority. If it is agreed by the Authority that such comment would lead to a Change then the procedure set out in Schedule 6 [Changes, Minor Works and Innovation Proposals] will apply. If the parties are unable to reach agreement, then either party may refer the matter directly to the Referee in accordance with Schedule 13 [Dispute Resolution Procedure].

1.7.2 In all cases, the parties will cooperate to identify potential alternative solutions to any comments raised that would not lead to a Change.

1.8 **EFFECT OF REVIEW BY AUTHORITY**

1.8.1 For greater certainty, Section 2.5 (Authority Not Responsible for Design or Construction) of Schedule 2 [Design and Construction Protocols] applies to any review or comment by the Authority on any Submittal.

1.9 **SUBMITTAL MEETINGS AND EXPLANATIONS**

1.9.1 At any time, the Authority may, acting reasonably, require Project Co, including Project Co's consultants, Sub-Contractors, and any other relevant personnel, at no additional cost to the Authority, to meet with representatives of the Authority and its advisors to answer questions regarding Project Co's Submittals or to explain to the Authority and the Authority's advisors the intent of Project Co's Submittals, including in relation to any Design and any associated documentation and as to its satisfaction of the requirements of this Agreement (including the Design and Construction Specifications). Project Co will, and will cause its consultants, Sub-Contractors, and any other relevant personnel to, attend all meetings requested by the Authority and answer all questions asked by the Authority in accordance with this Section 1.9 as soon as practicable and in any event no later than 5 Business Days from the date it received the Authority's questions or such longer period as agreed by the parties.

1.10 **REVISIONS**

1.10.1 Project Co will ensure that Submittals keep the same, unique reference number throughout the review process, and that all subsequent revisions of the same Submittal are identified by a sequential revision number. Correspondence related to such Submittal will reference the reference number and revision number.

1.10.2 Re-submittals will clearly show all revisions from the previous Submittal. Bound documents, including reports and manuals, will contain a preface that clearly states how revisions are marked and the previous revision number against which the revisions have been marked. A consistent format for mark-ups of documents will be used (e.g. deletions struck out and additions underscored). Revised portions of drawings will be clearly marked (with appropriate means to visually distinguish between the parts of the drawing that are revised and the parts that are not revised) and the revision number and description of the revision will be included on the drawing.

1.10.3 All revisions on print media will be initialed by hand by the individual designer, design checker and, where applicable, by the drafter and the drafting checker and will identify the persons who initialed the Submittal. Electronic versions of the Submittal will identify the persons who initialed the revisions to the printed version of the Submittal.

1.10.4 Project Co will keep all Reviewed Drawings and Specifications current. If any Reviewed Drawings and Specifications are revised as part of a Submittal, all other Reviewed Drawings and Specifications relying on or based on that Reviewed Drawings and Specifications will also be revised accordingly. All such revised Reviewed Drawings and Specifications will also be submitted with the Submittal to which it relates.

APPENDIX 2C

ENERGY

1. INTERPRETATION

1.1 Definitions

In this Appendix, in addition to the definitions set out in Schedule 1 of this Agreement:

“Annual Energy Target” for an Energy Year means the amount determined pursuant to Section 4.2 of this Appendix, as adjusted pursuant to Section 4.3 of this Appendix;

“Average Unit Cost” for an Energy Year means the average cost to Project Co or the Authority, as the case may be, of each Gigajoule of Energy purchased by Project Co or the Authority for the Facility during that Energy Year, calculated in accordance with Section 5.1 of this Appendix;

“CaGBC Experienced Modellers List” means the most recent version of the Canada Green Building Council’s Experienced Modellers List
http://www.cagbc.org/AM/PDF/CaGBCs_Experienced_Modellers_List-EN.pdf;

“Cooling Degree Days” for a period means the figure obtained or calculated from the Weather Data for the Facility setting out the extent to which the average outdoor temperature during that period at the Lands was greater than a mean temperature of 18 degrees Celsius;

“Core Hours” means, in respect of the Facility, 24 hours per day, 7 days per week unless otherwise expressly provided in the Clinical Specifications;

“Design and Construction Energy Target” means the annual Targeted Energy Consumption included in the Preferred Proponent’s Proposal, and as enclosed in the Attachment 2 of this Appendix 2C;

“Energy” means Energy used in the Facility and created by, or produced from, electricity, thermal sources, steam, gas, oil, coal and any other fossil-based fuel or biomass, including wood products;

“Energy Analysis Report” means the report referred to as the “Energy Analysis Report” in Section 6.1 of this Appendix;

“Energy Consumption” for a period means the Gigajoules of Energy consumed at the Facility during that period;

“Energy Gainshare” means the amount calculated in accordance with Section 5.2 of this Appendix;

“Energy Monitoring Model” means a spreadsheet based model designed to enable adjustment of Energy Consumption data to reflect changes in weather, occupancy patterns, and other variables affecting Energy Consumption as set out in Section 4.1 of this Appendix;

“Energy Painshare” means the amount calculated in accordance with Section 5.3 of this Appendix;

“Energy Year” means:

- (a) the 12 month period beginning on the day after the Monitoring Period;
- (b) each subsequent period of 12 months during the Term; and
- (c) the period of less than 12 months from the end of the previous Energy Year to the Termination Date;

“Environmental Credit” means any income, credit, right, benefit or advantage relating to environmental matters including type and level of emissions, means of production of Energy, input sources and compliance with any environmental laws, regulations, rules or orders;

“Facility Operation Variances” means any material variances between the actual occupancy and usage of the Facility and the assumptions for occupancy and usage set out in the Design and Construction Specifications, the Reviewed Drawings and Specifications and the Proposal Extracts (Design and Construction) regarding the occupancy and usage of the Facility;

“Gigajoule” or **“GJ”** means the international system of units of Energy being 1,000,000,000 Joules;

“Heating Degree Days” for a period means the figure obtained or calculated from the Weather Monitoring Data for the Facility setting out the extent to which the average outdoor temperature during that period at the Lands was less than a mean temperature of 18 degrees Celsius;

“Independent Energy Consultant” means one or more individuals engaged jointly by Project Co and the Authority to complete the adjustments to the Energy target, described in Section 3.2 of this Appendix, and who are listed on the CaGBC Experienced Modellers List;

“Monitoring Period” means the period commencing on the Service Commencement Date and ending on the last day of the calendar month in which the second anniversary of the Service Commencement Date occurs;

“Non-Targeted Energy Consumption” means:

- (a) electrical Energy consumed by the Facility excluding electricity consumed by Targeted Electrical Components;
- (b) fuel use associated with the emergency use, or mandatory testing requirements, of the emergency generators;
- (c) Energy, if any, consumed for producing steam for sterilization; and
- (d) thermal Energy such as steam, hot water and domestic hot water used by food service equipment, laundry equipment and medical equipment.

“Site Weather Monitoring Station” means the weather monitoring stations operated by Environment Canada located at the Yellowknife Airport or, if data from either of those weather monitoring stations is unavailable, such other properly located and calibrated weather monitoring stations acceptable to each of Authority and Project Co, acting reasonably, or otherwise determined pursuant to Schedule 13 [Dispute Resolution Procedure];

“Targeted Electrical Components” means all:

- (a) hardwired interior and exterior lighting;
- (b) elevators; and
- (c) electrically operated HVAC systems and mechanical equipment, including pumps, fans, chillers, heat pumps, heating boilers, domestic hot water heaters, dehumidifiers, humidifiers and fan heaters;

“Targeted Energy Consumption” means Energy Consumption minus Non-Targeted Energy Consumption, such consumption to be calculated from the applicable BMS and metering systems;

“tCO₂e” means tonnes of carbon dioxide equivalent;

“Test Period” means the 12 month period commencing on the first day of the calendar month that is at least 6 months after the Service Commencement Date; and

“Weather Data” means the record by the Site Weather Monitoring Stations of daily temperature and the calculation of the extent to which the average outdoor temperature during that day was greater or less than a mean temperature of +18 degrees Celsius.

2. ENERGY SUPPLY AND CONSUMPTION

2.1 Energy Supply and Payment

The Authority will from time to time as required enter into contracts with Energy suppliers for the supply of Energy to the Facility, and will be responsible for all payments related to such contracts. Without limiting Project Co’s obligations in Appendix 4E [Utility Management Services], Project Co will administer such contracts, including dealing with suppliers to resolve issues from time to time, and will provide such other reasonable assistance related to such contracts as may be requested by the Authority.

2.2 Recording and Monitoring of Weather Data and Energy Consumption

Project Co will collect Weather Data for the Facility from the Site Weather Monitoring Stations and will install equipment to record and monitor consumption of each type of Energy in the Facility which will:

- (a) be suitable and properly calibrated to enable the Authority to undertake real time:
 - (1) collection and monitoring of:

- (A) Energy trends, including current and historic Energy Consumption;
 - (B) Energy end use breakdown by heating, cooling, heat rejection, pumps, fans, interior lighting, exterior lighting, receptacle loads, hot-water and equipment loads, and including domestic hot and cold water consumption;
 - (C) Energy Consumption breakdown by Targeted and Non-Targeted Energy Consumption; and
 - (D) all applicable weather data from the Site Weather Monitoring Stations;
- (2) analysis of the data collected, including graphical comparisons to:
- (A) historical (year over year) consumption;
 - (B) Weather Data;
 - (C) Utility bills; and
 - (D) consumption against declared Energy targets;
- (b) provide early warning of malfunctions and deviations from norms;
- (c) be provided in a “dashboard” format compatible with Pulse Energy Manager System or Schneider Electric Energy View Online, or an approved alternate;
- (d) be remotely accessible by the Authority through a web-based browser and portable devices such as smartphones; and
- (e) secure all such properly recorded information so that it is not lost or degraded as a result of any equipment or service malfunctions, and will secure such information from any adjustment, modification or loss from any source.

2.3 Calculation of Energy Performance

- (a) For the purpose of determining the Design and Construction Energy Target, Project Co shall calculate the Energy performance for:
- (1) according to the building performance rating method set out in Part 8 of the National Energy Code for Buildings (NECB), 2011;
 - (2) Using a computer simulation model for the entire relevant building project; and
 - (3) including all Energy costs associated with the relevant building project, including that required to condition all shelled space and Unallocated/Unassigned Space.
- (b) In calculating the Energy performance of the facility, Project Co shall:

- (1) Refer to the assumptions set out in Attachment 1 to this Appendix 2C; and
- (2) clearly identify any deviations between the assumptions set out in Attachment 1 and the assumptions underlying the Design, Construction and Energy modeling of the Facility.

2.4 Energy Consumption Certificate

Promptly after the end of each month following the Service Commencement Date, Project Co will deliver to the Authority a certificate showing for the Facility:

- (a) the Energy Consumption by Energy source in Gigajoules for that month with respect to:
 - (1) total Energy Consumption;
 - (2) Targeted Energy Consumption; and
 - (3) Non-Targeted Energy Consumption;
- (b) the peak electrical demand date and hour;
- (c) the Weather Data for that month, including the number of Heating Degree Days and Cooling Degree Days;
- (d) building occupancy; and
- (e) any other variable that affects the Energy Consumption relative to the Energy model assumptions set out in Attachment 1 to Appendix 2C [Energy].

3. DESIGN AND CONSTRUCTION ENERGY GUARANTEES

3.1 Monitoring of Energy Consumption

During the Monitoring Period and the Test Period, Project Co and the Authority will monitor Energy Consumption in order to determine the Energy Consumption for the Monitoring Period and the Test Period.

3.2 Adjustment to Energy Consumption

Within 2 years after Service Commencement, Project Co will engage an Independent Energy Consultant acceptable to the Authority, acting reasonably, to determine whether and to what extent the Targeted Energy Consumption for the Test Period should be adjusted based on factors which, in the Energy consultant's professional opinion, are applicable, including actual climate conditions, occupancy, equipment use and Authority controlled effects during the Test Period, and differ from the factors taken into account in the Energy model assumptions set out in Attachment 1 to this Appendix.

A more detailed methodology for this adjustment will be developed to the satisfaction of the Authority,

Project Co and the Independent Energy Consultant and may use the Energy Monitoring Model and/or a spreadsheet based analysis.

3.3 Failure to Achieve Design and Construction Energy Target

If the Targeted Energy Consumption in the Test Period (as may be adjusted pursuant to Section 3.2 of this Appendix) for the Facility exceeds the Design and Construction Energy Target for the Facility, then Project Co will do one of the following:

- (a) modify the Facility as required so that annual Targeted Energy Consumption does not exceed the Design and Construction Energy Target for the Facility, subject to compliance with the Design and Construction Specifications and the approval of such modifications by the Authority, not to be unreasonably withheld or delayed; or
- (b) pay to the Authority a lump sum amount that the Authority agrees, acting reasonably, represents the lesser of [REDACTED] and the net present value of the cost to the Authority during the 30 year Operating Period of the amount by which Targeted Energy Consumption will exceed the Design and Construction Energy Target for the Facility, based on the projected utility costs identified in Attachment 1, on the assumption that the excess in the Monitoring Period will continue for the balance of the expected life of the Facility, and if this Section 3.3(b) is applied the provisions of Schedule 9 [Compensation on Termination] will be amended as necessary to ensure that the Authority will not, as a consequence of the application of this Section 3.3(b), face any additional liability upon early termination of this Agreement.

3.4 Consequences of Failure to Achieve Targets

The consequences to Project Co for not meeting the Design and Construction Energy Target, as may be adjusted pursuant to Section 3.2 of this Appendix, are limited to those set out in Section 3.3 of this Appendix.

4. ANNUAL ENERGY TARGETS

4.1 Energy Monitoring Model

During the Monitoring Period, Project Co will engage an Independent Energy Consultant to prepare for the Authority's review and approval, not to be unreasonably withheld or delayed, a model (the "**Energy Monitoring Model**") that is able from time to time to be updated to determine:

- (a) the expected annual Energy Consumption and Targeted Energy Consumption for the ensuing 5 year period for the Facility based on a pre-determined set of in-puts (including actual temperatures and consumption):
 - (1) for the first 5 year period after the Monitoring Period, the Monitoring Period; and
 - (2) for each subsequent 5 year period, the immediately preceding 5 year period; and
- (b) the effect on annual Targeted Energy Consumption for the Facility if the actual

annual average temperatures are higher or lower than during the previous year.

4.2 Annual Energy Target

In respect of the Facility, the Annual Energy Target for the Energy Years after the Monitoring Period will be the expected annual Targeted Energy Consumption determined as follows:

- (a) for the first five years after the Monitoring Period, the expected annual Targeted Energy Consumption will be as determined by the Energy Monitoring Model at the end of the Monitoring Period;
- (b) at the end of each five Energy Year period after the Monitoring Period, Project Co will update and re-run the Energy Monitoring Model using the Weather Data and other applicable data that has been approved by the Authority from such five year period; and
- (c) for each of the five Energy Years after the Energy Monitoring Model is updated and re-run the expected annual Targeted Energy Consumption will be as determined by the updated and re-run Energy Monitoring Model, as adjusted pursuant to Section 4.3.

4.3 Adjustment to Annual Energy Target

If the temperature set out in the Weather Data for an Energy Year as measured by the Weather Monitoring Station for the Facility is different from the temperature used in the Energy Monitoring Model to set the Annual Energy Target for that Energy Year for the Facility or if there is a significant change to the Core Hours for the Facility, then the Annual Energy Target for that Energy Year for the Facility will be adjusted for such variances.

In addition, the parties will monitor compliance with the Energy Management Plan referred to in Section 4.6 of Schedule 4 [Services Protocols and Specifications] at each meeting of the Operating Period Joint Committee. If either Project Co or the Authority does not comply with the Energy Management Plan, then:

- (a) the Annual Energy Target for the Facility will be adjusted by an appropriate amount to reflect the effect of non-compliance; and
- (b) the parties are unable to agree on the appropriate amount of such adjustment, Project Co will engage an Independent Energy Consultant acceptable to Project Co and the Authority, acting reasonably, to determine, within 2 months after such engagement, whether and to what extent the Annual Energy Target for the Facility should be adjusted.

5. SHARING GAIN AND PAIN

5.1 Average Unit Cost

In respect of the Facility, the Average Unit Cost for an Energy Year will be the amount obtained by dividing:

- (a) all amounts paid or payable by Project Co or the Authority in respect of the supply of the Energy in that Energy Year for the Energy Consumption in the Facility; by
- (b) the Energy Consumption for that Energy Year in the Facility.

5.2 Energy Gainshare

The Energy Gainshare for an Energy Year will be the lesser of:

- (a) [REDACTED] of the product of:
 - (1) the amount, if any, by which the Targeted Energy Consumption in that Energy Year for the Facility is less than [REDACTED] of the Annual Energy Target for that Energy Year for the Facility; and
 - (2) the Average Unit Cost for that Energy Year; and
- (b) [REDACTED]

5.3 Energy Painshare

The Energy Painshare for an Energy Year will be the lesser of:

- (a) [REDACTED] of the product of:
 - (1) the amount, if any, by which the Targeted Energy Consumption in that Energy Year for the Facility is greater than [REDACTED] of the Annual Energy Target for that Energy Year for the Facility; and
 - (2) the Average Unit Cost for that Energy Year; and
- (b) [REDACTED]

5.4 Calculation and Invoicing

Project Co will submit to the Authority for each Energy Year Project Co's calculation of the Average Unit Cost and Energy Gainshare and Energy Painshare for the Facility as soon as practicable, and in any event within 20 Business Days after the receipt of the last invoice containing information on all Energy use during that Energy Year. Any unresolved dispute about such calculations will be resolved in accordance with the Dispute Resolution Procedure.

6. CONTENT AND FORMAT OF THE ENERGY ANALYSIS REPORT

6.1 Energy Analysis Report

The Energy Analysis Report will present findings of actual consumption for each separate Utility for the relevant Contract Year. The parties will agree upon the exact form of the Energy Analysis Report from time to time but as a minimum the Energy Analysis Report will include the following:

- (a) For each Payment Period (within 10 Business Days of the end of the Payment Period):
 - (1) the Targeted Energy Consumption in Gigajoules for each type of Energy in that month;
 - (2) the Non-Targeted Energy Consumption in Gigajoules for each type of Energy in that month;
 - (3) the consumption data for all other Utilities;
 - (4) Weather Data recorded for that month;
 - (5) Facility Operation Variances; and
 - (6) any other variable that affects the Targeted Energy Consumption relative to the Energy model assumptions.
- (b) For each Contract Year (within 20 Business Days after the receipt of the last invoice containing information on all Energy use during that Contract Year):
 - (1) all of the items reported for each Payment Period in Section 6.1(a), but for the Contract Year;
 - (2) the Energy mix for the Contract Year;
 - (3) a calculation showing Energy Painshare or Energy Gainshare; and
 - (4) a revised Energy Monitoring Model showing the Annual Energy Target for the upcoming Contract Year.

7. ENVIRONMENTAL CREDITS

7.1 Entitlement to Environmental Credits

The Authority will be entitled to any and all Environmental Credits related to the Facility and its operation and Project Co will use commercially reasonable efforts to assist the Authority in achieving the maximum Environmental Credits available.

On any future Energy efficiency and conservation project where the Authority and Project Co collaborate, the Authority will apply for and be the beneficiary of all funding and cash incentives payable as a result of the project.

ATTACHMENT 1

ENERGY MODEL ASSUMPTIONS FOR DESIGN AND CONSTRUCTION ENERGY TARGET

Project Co, at the direction of the Authority used the following Energy model assumptions to determine the Design and Construction Energy Target and shall use these assumptions for the calculation of the Targeted Energy Consumption for the Facility:

- (a) identify the Energy Consumption by fuel type, i.e., electricity, thermal (steam or hot water), natural gas, fuel oil, biomass, on-site renewable;
- (b) include a table of all assumptions and values utilized in modeling the Facility; and
- (c) modelling parameters for the Facility in accordance with the National Energy Code for Buildings 2011 (NECB-2011) compliance rules and requirements.

General Assumptions

Service Hot Water	National Energy Code for Building 2011 (NECB - 2011)
Climate Zone	8
Utility Rates	As of the Effective Date: <ul style="list-style-type: none"> • an initial unit rate for propane of █████/Litre; • an initial unit rate for heating oil of █████/Litre; • an initial unit rate for electrical of █████/MWh; • an initial unit rate for wood pellets of █████/tonne; • an assumed indexation of █████ per year; and • a discount rate of █████.
Process Steam for Sterilization	In accordance with Schedule 3 specifications. Operating schedule as per section A-8.4.3.2 of NECB operating schedules Table A-8.4.3.2.(1)H. Operating Schedule H
Lighting	Use space-by-space method in accordance with NECB – 2011, Table 4.2.1.6.
Space Temperature/Humidity	As per CSA-Z317.2-10, Table 1.
Occupancy Density, Equipment Power (Plug Load) and Operating Schedule	Use space-by-space method in accordance with NECB – 2011, Table A-8.4.3.3(1)B

Pumping Power	As per ASHRAE 90.1 Appendix G
Fuel Conversion Factor	Propane : 91,600 BTU/gallon propane (0.0966 GJ/gallon) as per ASHRAE 100-2006 Wood 17,060,700 BTU/ton wood (18 GJ/ton) as per GNWT Wood Pellet Pre-feasibility Analysis Report 2009
Location Weather File	Canadian Weather for Energy Calculations (CWEC), Yellowknife NWT http://doe2.com/Download/Weather/CWEC/

ATTACHMENT 2

DESIGN AND CONSTRUCTION ENERGY TARGET

The Design and Construction Energy Target is [REDACTED] eMWh.

APPENDIX 2D

EQUIPMENT AND FURNITURE

1. DEFINITIONS

In this Appendix, in addition to the definitions set out in Schedule 1 of this Agreement:

“Acceptance Protocol” has the meaning given in Section 4.1(a)(3) of this Appendix;

“Category A Equipment” means equipment including but not limited to desktop office equipment, printers, and non-biomedical mobile equipment, and items identified in Attachment 1 [Equipment List] as Category A.

“Category B Equipment” means all biomedical equipment, patient lifts, and all equipment associated with the facility component Medical Device Reprocessing as outlined in Appendix 3A, and items identified in Attachment 1 [Equipment List] as Category B.

“Category C Equipment” means all furniture as described in subsection 6.12.(b) of Schedule 3, and the equipment identified in Attachment 1 [Equipment List] as Category C.

“Category D1 Equipment” means all specialties, equipment, millwork, modular casework, clinical systems furniture, and systems furniture as described in section 6.10, 6.11 and 6.12 of Schedule 3 and not listed in Attachment 1 [Equipment List] and Attachment 2 [Equipment Cut Sheets].

“Category D2 Equipment” means the equipment associated with the facility components of Laundry and Linen Services and Food Services as outlined in Appendix 3A, and all headwalls, ceiling lift tracks, curtain tracks, and millwork, modular casework, clinical systems furniture, and systems furniture outlined in section 6.10, 6.11 and 6.12 of Schedule 3 that is also listed in Attachment 1 [Equipment List] and/or Attachment 2 [Equipment Cut Sheets].

“Commissioning” means testing and commissioning the equipment or system in accordance with any commissioning requirements set out in this Agreement, all applicable standards and Good Industry Practice, including to ensure that the Equipment is operating in accordance with the manufacturer’s requirements and specifications, and **“Commission”** and **“Commissioned”** have corresponding meanings;

“Delivery” means delivery to the Facility, and **“Deliver”** and **“Delivered”** have corresponding meanings;

“Equipment” means the Category A Equipment, the Category B Equipment, the Category C Equipment, the Category D1 Equipment and/or the Category D2 Equipment as applicable;

“Equipment Cash Allowance” means the monies to be deposited by the Authority into the Equipment Cash Allowance Account in the amounts and at the times required pursuant to this Appendix and paid from the Equipment Cash Allowance Account for the purchase of Category C Equipment and Category D2 Equipment pursuant to this Appendix;

“Equipment Cash Allowance Account” means a separate, interest-bearing bank account for all Category C Equipment and Category D2 Equipment related cash flows that is maintained by Project Co at the Authority’s direction as contemplated in this Appendix;

“Equipment Consultant” means the equipment consultant engaged by Project Co pursuant to Section 5.7 of this Appendix;

“Equipment Cut Sheets” means the equipment cut sheets containing specifications for items of equipment on the Equipment List and posted as “FFE Appendix F - Cutsheets” in the online Stanton Territorial Hospital Project data room, as those cut sheets may be updated in accordance with this Agreement;

“Equipment List” means the list of Category A Equipment, Category B Equipment, Category C Equipment, Category D1 Equipment and Category D2 Equipment set out in Attachment 1 to this Appendix;

“Equipment Procurement Schedule” means the schedule attached as Attachment 2 to this Appendix, as approved by the Authority and updated in accordance with Section 5.5 of this Appendix;

“Installation” means, as applicable, connection to necessary building services, including plumbing, heating, cooling, ventilation and electricity, and medical gas supplies, all necessary mechanical rough-ins, and connection to necessary communication or network interfaces or devices;

“Procurement” means the management and completion of procurement processes for Category C Equipment and Category D2 Equipment pursuant to Section 3 of this Appendix, and **“Procure”** and **“Procured”** have corresponding meanings;

“Request for Payment Approval” has the meaning given in Section 4.9 of this Appendix; and

“Setup” includes:

- (a) transportation and movement within the Facility from the delivery location to the final installation location;
- (b) placement in the final location within the Facility; and
- (c) any necessary unwrapping, unpacking and assembly.

2. EQUIPMENT RESPONSIBILITIES

2.1 Category A Equipment

Subject to Section 5.1 of this Appendix, the Authority will, at its cost, be responsible for the identification, specification, selection, procurement, purchase, Delivery, Setup, Installation, commissioning, maintenance and replacement of all Category A Equipment.

2.2 Category B Equipment

Subject to Section 4.12 and Section 5.1 of this Appendix,

- (a) the Authority will, at its cost, be responsible for the identification, specification, procurement, purchase, freight and tariff costs of Delivery, maintenance and replacement; and
- (b) Project Co will, at its cost, be responsible for the coordination of Delivery, Setup, Installation and Commissioning

of all Category B Equipment.

2.3 Category C Equipment

Subject to Section 4.12 and this Appendix,

- (a) the Authority will, at its cost, be responsible for the identification, maintenance and replacement; and
- (b) Project Co will, at its cost but using the Equipment Cash Allowance to pay the actual purchase price of the relevant Equipment and any associated freight and tariff costs, be responsible for the specification, Procurement, purchase, coordination of Delivery, Setup, Installation and Commissioning

of all Category C Equipment.

2.4 Category D1 Equipment

Project Co will, at its cost, be responsible for the identification, specification, selection, procurement, purchase, Delivery, Setup, Installation, Commissioning, maintenance and replacement of all Category D1 Equipment.

2.5 Category D2 Equipment

Project Co will, at its cost but using the Equipment Cash Allowance to pay the actual purchase price of the relevant Equipment and any associated freight and tariff costs, be responsible for the identification, specification, selection, Procurement, purchase, coordination of Delivery, Setup, Installation, Commissioning, maintenance and replacement of all Category D2 Equipment.

3. INSTALLATION AND PROCUREMENT OF CATEGORY A EQUIPMENT AND CATEGORY B EQUIPMENT

3.1 Installation Timing for Category A Equipment

Project Co will:

- (a) as early as practicable in accordance with Good Industry Practice and without limiting any of Project Co's other obligations under this Section 3.1, identify to the Authority:
 - (1) each item of Category A Equipment, if any, that must be Installed in the Facility for Project Co to achieve a Service Commencement Date;

- (2) for each item of Category A Equipment, the earliest date when the Facility will be available to the Authority to Install such item; and
 - (3) for each item of Category A Equipment identified by Project Co under Section 3.1(a)(1) above, if any, the date by which such item must be Installed so as not to delay the Design, the Construction, any Service Commencement Date or the Authority's use and occupation of the Facility; and
- (b) as required from time to time until the Service Commencement Date, but no less than once per calendar month, update the information in Section 3.1(a) above so that at all times it is an accurate and reasonable representation of Project Co's plans for the completion of the Design and Construction of the Facility and the availability of the Facility for the Installation of Category A Equipment.

The Authority will cause each item of Category A Equipment identified by Project Co under Section 3.1(a)(1) above to be Installed by the date specified by Project Co under Section 3.1(a)(3).

In order to enable the Authority to meet the deadlines specified in Section 3.1(a)(3), Project Co acknowledges that the earliest date when the Facility will be available to the Authority pursuant to Section 3.1(a)(2), should be at least six months prior to the Target Service Commencement Date, and when the Facility is so available, Project Co will provide the Authority with a designated route from the staging and storage space described in Section 5.6 and access to elevators for every floor of the Facility.

3.2 Procurement Timing for Category B Equipment

Project Co will:

- (a) as early as practicable in accordance with Good Industry Practice and without limiting any of Project Co's other obligations under this Section 3.2, identify to the Authority:
 - (1) each item of Category B Equipment, if any, that must be procured by the Authority by a certain date for Project Co to achieve a Service Commencement Date; and
 - (2) for each item of Category B Equipment identified by Project Co under Section 3.2(a)(1) above, if any, the date by which such item must be procured by the Authority so as not to delay the Design, the Construction, any Service Commencement Date or the Authority's use and occupation of the Facility; and
- (b) as required from time to time until the Service Commencement Date, but no less than once per calendar month, update the information in Section 3.2(a) above so that at all times it is an accurate and reasonable representation of Project Co's plans for the completion of the Design and Construction of the Facility.

The Authority will cause each item of Category B Equipment identified by Project Co under Section 3.2(a)(1) above to be procured by the date specified by Project Co under Section 3.2(a)(2).

4. PROCUREMENT OF AND PAYMENT FOR CATEGORY C EQUIPMENT, CATEGORY D1 EQUIPMENT AND CATEGORY D2 EQUIPMENT

4.1 Solicitation of Proposals

For each item of Category C Equipment, Category D1 Equipment and Category D2 Equipment, Project Co will:

- (a) propose specifications, subject to Authority approval.

For each item of Category C Equipment and Category D2 Equipment (not including Category D1 Equipment), Project Co will:

- (a) in consultation with the Authority, draft competitive bidding documents, such documents to include:
 - (1) the specifications approved by the Authority for the relevant Equipment;
 - (2) terms and conditions for the relevant equipment purchase contract or purchase order, including training for Authority staff;
 - (3) a protocol for testing the relevant Equipment to demonstrate that it has been installed in accordance with the manufacturer's requirements and is functioning in accordance with the specifications included in the relevant equipment purchase contract or purchase order (an "**Acceptance Protocol**"); and
 - (4) the scope of any Setup or Installation work that the Equipment vendor will perform;
- (b) obtain and submit to the Authority prices sought on a competitive basis from any supplier and for any make or model that will meet or exceed the specifications of the referenced make and model, if any, for that item of Equipment; and
- (c) issue competitive bidding documents to at least three different suppliers for prices for at least two different makes and models (unless less than three suppliers and/or less than two models for such Equipment exist), such prices to be on comparable terms and conditions.

Project Co assumes all risk of delays to the Project Schedule caused by late Procurement, Delivery, Setup, Installation or Commissioning of any Category C Equipment, Category D1 Equipment and/or Category D2 Equipment.

4.2 Project Co Analysis and Recommendations

Based on the proposals received under Section 4.1 of this Appendix, Project Co will provide a written analysis and recommendation to the Authority for the Procurement of each item of Category C Equipment and Category D2 Equipment, which will include the following:

- (a) item description, item number, and quantities;

- (b) the manufacturer, model number, supplier, specifications and options for the item;
- (c) an analysis, including consideration of compliance with the relevant specifications in the Equipment List and the Equipment Cut Sheets and recommendation as to which make, model and supplier of the item provides, in Project Co's opinion, the overall best value to the Authority, and any other benefits of the recommended item;
- (d) an analysis of the effect the item will have on the overall design of the Facility and the relevant areas within the Facility;
- (e) details of the warranties, installation services, training, spare parts and start-up consumables included with the item by the relevant manufacturer or supplier;
- (f) the date and time when the item will be delivered to the Site;
- (g) the cost of the item, including a breakdown of:
 - (1) subject to Section 4.7(b) of this Appendix, any cost to the Authority for any Setup, Installation and Authority staff training to be performed by the Equipment vendor; and
 - (2) applicable Taxes,

and net of all direct or indirect discounts, rebates, refunds, chargebacks, credits, price adjustments or any other allowances obtained across all categories of Equipment that effectively reduce the net selling price;
- (h) based on the information in Section 4.2(g) of this Appendix, the total amounts and timing of the Equipment Cash Allowance cash flows required to implement the recommendation and the full details of the calculation of such amounts;
- (i) whether the procurement is a purchase, a lease, part of a managed equipment program, based on usage pricing or other arrangement, and the terms and timing of payments thereof;
- (j) if so requested by the Authority, a copy of each quote or proposal and all other relevant information in respect of the item and such other documentation as the Authority may reasonably require, all of which Project Co will provide on a fully transparent and open basis to the Authority;
- (k) the latest date (not to be less than 30 Business Days after receipt by the Authority of the recommendation or such other period as the parties may agree each acting reasonably) by which a final procurement decision on the item is required from the Authority without causing delays to the Construction or Service Commencement Date, or additional costs for that item; and
- (l) if no proposals for items of Category C Equipment or Category D2 Equipment are available or have been received by Project Co, an alternate recommended course of action for procurement by Project Co including possible substitutes for such items.

The Authority may request additional information from Project Co regarding the analysis and recommendations of Project Co, which Project Co will provide to the Authority as soon as reasonably practicable thereafter.

4.3 Authority Approval

In response to the recommendations for items of Category C Equipment and Category D2 Equipment made by Project Co to the Authority under Section 4.2 of this Appendix, the Authority may, on or before the latest date for such decision as set out in the recommendation pursuant to Section 4.2(k) of this Appendix, do any of the following with respect to some or all of the items:

- (a) instruct Project Co to proceed with the procurement;
- (b) withdraw the requirement for Project Co to proceed with the procurement;
- (c) subject to Section 5.4 of this Appendix, increase or decrease the quantities, require the procurement of other items in substitution for such items, or otherwise change the items to be procured;
- (d) acting reasonably, reject any supplier or item of Category C Equipment or Category D2 Equipment as unacceptable to the Authority;
- (e) elect to obtain certain items of Category C Equipment, Category D1 Equipment and/or Category D2 Equipment for the Project by obtaining, transferring or relocating existing equipment from the Authority or others; or
- (f) elect to procure directly certain items of Category C Equipment, Category D1 Equipment and/or Category D2 Equipment.

4.4 Project Co To Implement Authority Instructions

Project Co will proceed diligently to implement the Authority's instructions given pursuant to Section 4.3 of this Appendix, including promptly making alternate recommendations for any proposed supplier or item of Category C Equipment or Category D2 Equipment that has been rejected by the Authority under Section 4.3(d) of this Appendix.

4.5 Management of Equipment Cash Allowance Account

Project Co will establish the Equipment Cash Allowance Account and will manage all monies deposited in the Equipment Cash Allowance Account by the Authority pursuant to Section 4.6 in trust for the benefit of, and as directed by, the Authority as follows:

- (a) interest earned will accrue in the Equipment Cash Allowance Account and will be for the benefit of the Authority;
- (b) Project Co will grant to the Authority a first priority security interest in and to the Equipment Cash Allowance Account and the funds deposited therein and will execute all documents reasonably required by the Authority in connection with such security;

- (c) Project Co will withdraw monies from the Equipment Cash Allowance Account as and at the times directed by the Authority as required to pay for procurements approved by the Authority pursuant to Section 4.10 of this Appendix, net of all direct or indirect discounts, rebates, refunds, chargebacks, credits, price adjustments or any other allowances obtained across all categories of Equipment that effectively reduce the net selling price;
- (d) Project Co will provide a reconciliation of the Equipment Cash Allowance Account to the Authority on a monthly basis;
- (e) as procurements are completed, Project Co will keep and update an overall budget for the Equipment Cash Allowance and will provide access to and copies of such budget to the Authority monthly and as otherwise required by the Authority;
- (f) if at the Service Commencement Date there is a positive balance in the Equipment Cash Allowance Account, such balance will be the property of the Authority and will be paid by Project Co as directed by the Authority (less any amounts provisioned for settlement on certain equipment), and the Authority will have no further obligation to make any deposits into the Equipment Cash Allowance Account; and
- (g) the parties will review the operation of the Equipment Cash Allowance Account on a regular basis and agree to any appropriate modifications to ensure its efficient operation.

4.6 Deposits to Equipment Cash Allowance Account

The Authority will deposit funds into the Equipment Cash Allowance Account in accordance with the Equipment Procurement Schedule, as approved by the Authority.

Subject to Section 4.8 of this Appendix, the Authority will make deposits into the Equipment Cash Allowance Account if the payment requirements, including applicable Taxes, for the subsequent 12 months for procurements approved by the Authority pursuant to Section 4.10 of this Appendix exceed the then balance of the Equipment Cash Allowance Account.

4.7 Minimizing Costs

Project Co will:

- (a) use all reasonable efforts to minimize the cost to the Authority of Category C Equipment and Category D2 Equipment and to conduct its procurement so as to minimize any reasonably avoidable adverse effect on the cost to the Authority of Category C Equipment and Category D2 Equipment;
- (b) ensure that the cost to the Authority of Category C Equipment and Category D2 Equipment includes costs for Setup, Installation and/or Authority staff training performed by the Equipment vendor only to the extent that such Setup or Installation is in the normal scope of the purchase and sale of equipment similar to the Category C Equipment or the Category D2 Equipment, as applicable, for a project similar to the Project and is commonly performed by the Equipment vendor; and

- (c) cause all discounts, rebates, refunds, chargebacks, credits, price adjustments and other allowances available in connection with the Category C Equipment or the Category D2 Equipment, as applicable, to be attributed solely to and to benefit the pricing of Category C Equipment or the Category D2 Equipment, as applicable.

4.8 Mark-Ups

Project Co agrees that:

- (a) any amount paid from the Equipment Cash Allowance will not include any mark-up for overhead, other costs and profit of Project Co and any other Project Co Person other than the suppliers of Category C Equipment and Category D2 Equipment; and
- (b) there will be no adjustment to the payment out of the Equipment Cash Allowance Account on account of profit, overhead, or other costs associated with procurement, expediting, installation, delivery, unpacking, training, assembling and testing, and commissioning of Category C Equipment or Category D2 Equipment, as applicable, by Project Co and any other Project Co Persons other than the suppliers of Category C Equipment or Category D2 Equipment, as applicable, all of which Project Co has already included in, and will be paid by the Authority to Project Co as part of, the Service Payments.

4.9 Request for Payment Approval

Project Co will provide monthly a request to the Authority for payment approval (the "**Request for Payment Approval**") for Category C Equipment and Category D2 Equipment that will include the following:

- (a) details of all supplier invoices that are due for payment that month, including relevant supporting documentation;
- (b) reconciliation with the Equipment List of the Category C Equipment and Category D2 Equipment for which payment approval is requested;
- (c) any discounts, rebates, refunds, chargebacks, credits, price adjustments and other allowances available in connection with the Category C Equipment and Category D2 Equipment; and
- (d) the cash flow process with respect to the Equipment Cash Allowance as set out in Section 4.5 of this Appendix.

4.10 Payment Approval

The Authority will, acting reasonably and within 10 Business Days of receipt of a Request for Payment Approval, advise Project Co in writing whether or not payment of the invoices set out in such Request for Payment Approval is approved. If the Authority does not approve payment of any invoice set out in a Request for Payment Approval, the Authority will provide full details as to the reason for not approving such payment.

4.11 Payment of Approved Invoices

Project Co will, within 5 Business Days of receipt of the Authority's approval of a Request for Payment Approval, as agent for the Authority only for purposes of payment from the Equipment Cash Allowance Account, make payment to the relevant suppliers as set out in the invoices in such Request for Payment Approval.

4.12 Responsibility for Authority-Obtained Category C Equipment, Category D1 Equipment and/or Category D2 Equipment

If the Authority elects to obtain or procure certain items of Category C Equipment, Category D1 and/or Category D2 Equipment pursuant to Sections 4.3(e) or 4.3(f) of this Appendix:

- (a) as soon as is reasonable practicable after such election, Project Co will advise the Authority:
 - (1) if such Equipment must be installed in the Facility for Project Co to achieve any Service Commencement Date; and
 - (2) if applicable, the date by which such Equipment must be delivered so as not to delay the Design, the Construction, any Service Commencement Date(s) or the Authority's use and occupation of the Facility;
- (b) Project Co will Install and Commission such items upon delivery to the Site; and
- (c) Project Co will not be responsible for the condition of any previously used items of Equipment, including any failure of such Equipment to meet commissioning requirements as a result of such condition.

4.13 Category C Equipment and Category D2 Equipment Reports

As of the 1st day of each month during the Construction Period and as at the Service Commencement Date, Project Co will provide reports to the Authority that include the following information:

- (a) itemized and aggregate amounts committed to date for all costs to the Authority of Category C Equipment and Category D2 Equipment;
- (b) which Category C Equipment and Category D2 Equipment item numbers have been procured and the itemized and aggregate costs to the Authority of such items;
- (c) the projected procurement of remaining Category C Equipment and Category D2 Equipment and the projected effect of such procurement on the Equipment Cash Allowance;
- (d) the delivery dates for each item procured;
- (e) any authorized or agreed changes in the Equipment List and Equipment Cut Sheets since the previous report, and the financial impact of such changes; and

- (f) any commentary on communication methods, the reporting method/approval process, frequency of communication and similar matters regarding Category C Equipment and Category D2 Equipment procurement and selection,

and Project Co will deliver such reports within 10 Business Days of the effective date of the report.

4.14 Warranties

Project Co will ensure that all manufacturer's and supplier's warranties for all Category C Equipment, Category D1 Equipment and Category D2 Equipment:

- (a) commence on the Service Commencement date of the relevant Facility Component in which the Equipment is located for each item of Category C Equipment, Category D1 Equipment or Category D2 Equipment, as applicable; and
- (b) are in the Authority's name.

The duration for Equipment warranties shall be determined as part of the Equipment List finalization process undertaken by Project Co and the Authority. Warranties should be provided by the Equipment supplier as part of the Equipment purchase price, unless otherwise agreed upon by the Authority at the time of Equipment tender.

For the Term of this Agreement, Project Co will be responsible for administering and enforcing all warranties for Category C Equipment, Category D1 Equipment and Category D2 Equipment on behalf of the Authority.

4.15 Standards for Equipment

Project Co will cause all Category C Equipment, Category D1 Equipment and Category D2 Equipment, except Category C Equipment, Category D1 Equipment and Category D2 Equipment procured by the Authority pursuant to Sections 4.3(e) or 4.3(f) of this Appendix, to be:

- (a) new;
- (b) of good quality and in a safe, serviceable and clean condition in accordance with Good Industry Practice;
- (c) in accordance with the Equipment List and the Equipment Cut Sheets;
- (d) CSA approved; and
- (e) in compliance with all applicable Laws.

Project Co will, as soon as practicable after receiving a request from the Authority, supply to the Authority evidence to demonstrate its compliance with this Section 4.15.

4.16 Training

Project Co will cause the relevant equipment vendor to provide appropriate and timely training to Authority staff on the proper use and maintenance of all Category C Equipment, Category D1 Equipment and Category D2 Equipment that Project Co installs in the Facility (except for those items of Category C Equipment, Category D1 Equipment and Category D2 Equipment that the Authority elects to obtain or procure pursuant to Sections 4.3(e) or 4.3(f) of this Appendix) and will provide sufficient training to the Authority's staff in accordance with Good Industry Practice to enable the Authority and its staff to properly utilize such Category C Equipment, Category D1 Equipment and Category D2 Equipment. The Authority will, in consultation with Project Co, schedule all such training activities.

4.17 Guidance Material and Manuals

On or before each Service Commencement Date, Project Co will transfer and deliver to the Authority all guidance material and manuals relating to relevant Category C Equipment, Category D1 Equipment and Category D2 Equipment items as produced and provided by the manufacturer or the supplier of such items.

4.18 Insurance

As part of the Procurement of Category C Equipment, Category D1 Equipment and Category D2 Equipment (except for those items of Category C Equipment, Category D1 Equipment and Category D2 Equipment that the Authority elects to obtain or procure pursuant to Sections 4.3(e) or 4.3(f) of this Appendix), Project Co will require the supplier of each item of Category C Equipment, Category D1 Equipment and Category D2 Equipment to retain all risks related to such equipment (including replacement thereof in the event of damage or destruction) during the Delivery, Setup, Installation and Commissioning process and until such time as title to the Category C Equipment, Category D1 Equipment and Category D2 Equipment passes to the Authority in accordance with Section 5.8(a) of this Appendix.

4.19 No Limitation

Without limiting Sections 2.1 or 2.2 of this Appendix, Category C Equipment and Category D2 Equipment shown on the Equipment List and in the Equipment Cut Sheets is not intended to be exhaustive or to be relied upon by Project Co, does not limit the requirements of the Design and Construction Specifications, and provides only an indication of some of Category C Equipment and Category D2 Equipment that the Authority may require.

5. GENERAL

5.1 Authority Not Obligated to Procure Equipment

The Authority intends to procure but, subject to Section 5.4 of this Appendix, the Authority is not obligated to procure the items of Category A Equipment or Category B Equipment shown on the Equipment List.

5.2 Integration of Equipment with Design of Facility

Project Co will ensure that all Equipment is integrated in accordance with Good Industry Practice with the overall design of the Facility and will include such Equipment as part of the design development process described in Section 5.4 of Schedule 2 [Design and Construction Protocols].

5.3 Acceptance Testing of Category C Equipment, Category D1 Equipment and Category D2 Equipment

Without limiting Project Co's obligation to Commission Category B Equipment, Category C Equipment, Category D1 Equipment and Category D2 Equipment, Project Co will, to the Authority's reasonable satisfaction, complete all of the aspects of the Acceptance Protocol for each item of Category B Equipment, Category C Equipment, Category D1 Equipment and Category D2 Equipment.

5.4 Changes to the Equipment List

The parties acknowledges that:

- (a) as at the Effective Date, the Equipment List and the Equipment Cut Sheets have not been finalized and, during the Construction Period, changes to the Equipment List and/or the Equipment Cut Sheets may be requested by the Authority or may occur as part of the design development process described in Section 5.4 of Schedule 2 [Design and Construction Protocols];
- (b) updates to the Equipment List and/or the Equipment Cut Sheets may be required from time to time because of manufacturers' or suppliers' changes, including changes to equipment availability, specifications and models, and changes in clinical practice; and
- (c) increases or decreases in the quantities of Equipment, substitution of items on the Equipment List or other changes to the Equipment List and the effects that such changes to the Equipment List or the Equipment Cut Sheets may have on the Design or the Construction may result in a net decrease, net increase or no net change in the cost to Project Co to complete the Design and the Construction.

Accordingly, the parties will:

- (d) cooperate to identify no net cost solutions to any proposed changes to the Equipment List or the Equipment Cut Sheets;
- (e) endeavour to agree to an expedited Change process to deal with Equipment changes; and
- (f) cooperate to amend the Equipment List or the Equipment Cut Sheets so that they are accurate and complete as required for Project Co to proceed with the Design and Construction without delay.

Project Co agrees that if changes are required to the Equipment List or the Equipment Cut Sheets, including additional Equipment, as a result of the Design development process described in Section 5.4 of

Schedule 2 [Design and Construction Protocols], Project Co will not be entitled to any Changes that increase the amount of compensation or time for completion of the Design and Construction.

If the Authority requests a Change that impacts the Equipment required, the additional Equipment will also be considered as part of the Change.

5.5 Equipment Procurement Schedule

The Equipment Procurement Schedule attached as Attachment 2 to this Appendix is preliminary and the parties will, each acting reasonably and within 40 Business Days after the Effective Date, finalize the Equipment Procurement Schedule in accordance with the following principles:

- (a) in order to take advantage of the most recent technological advances for Category C Equipment, Category D1 Equipment and Category D2 Equipment, final decisions on the selection of the Category C Equipment, Category D1 Equipment and Category D2 Equipment, together with any training or service requirements, will not be made by the Authority until as late as possible into the Construction Period;
- (b) Project Co will require adequate time to issue competitive bidding documents, receive proposals, clarify aspects of proposals, and prepare written analyses and recommendations for the Authority as contemplated by this Appendix;
- (c) the Authority will require adequate time to evaluate Project Co's analyses and recommendations as contemplated by this Appendix;
- (d) the Authority will require the ability to take advantage of bulk or other purchase opportunities advantageous to it;
- (e) Project Co will require the Equipment Procurement Schedule to allow adequate time to achieve the matters contemplated by this Appendix without any adverse effect on Design and Construction; and
- (f) Project Co will, if possible, structure and carry out procurements to optimize the benefits of any purchasing leverage available to the parties.

Project Co will, as required from time to time until the Service Commencement Date, but no less than once per calendar month by the 15th day of each month, in consultation with the Authority, update the Equipment Procurement Schedule so that it is at all times an accurate, reasonable and realistic representation of Project Co's plans for the procurement of the Category C Equipment, Category D1 Equipment and Category D2 Equipment in accordance with the requirements of this Agreement.

5.6 Staging and Storage

At least six months prior to the Target Service Commencement Date, Project Co will provide a space of adequate size to accommodate staging and storage of any Equipment. With respect to such staging and storage space, Project Co will:

- (a) ensure that the space is in the perimeter of the building with convenient external access for deliveries without utilizing any ramps and with no underground travel required;

- (b) ensure that the space is dry and clean;
- (c) ensure that the space is secure and lockable and provide a security patrol;
- (d) allow Authority representatives to access and work within the space;
- (e) ensure that the space is climate controlled;
- (f) where any Equipment needs oxygen for testing, deliver such Equipment from the space to another facility, if required, in accordance with the directions of the Authority and following testing, return any such Equipment to the space;
- (g) coordinate with the Authority to ensure that both the Authority and Project Co will have adequate time allocated at the unloading location;
- (h) provide adequate power (including an adequate number of quad receptacles on an adequate number of different circuits) to the space and notify the Authority, in advance, of any power interruptions;
- (i) provide adequate plumbing (including utility sink(s) and wash area with drainage, if required) to the space; and
- (j) provide an adequate number of data drops in the space.

5.7 Equipment Consultant

Project Co will, at its cost, engage an Equipment Consultant experienced with the equipment requirements of healthcare facilities similar to the Facility and experienced with the specification, procurement, installation and commissioning of equipment similar to the Equipment. If, for any reason, the Equipment Consultant resigns or is otherwise unavailable, then Project Co will use all reasonable efforts to retain a replacement with similar expertise and experience to the Equipment Consultant, satisfactory to the Authority acting reasonably. Project Co will not replace the Equipment Consultant without the Authority's consent, acting reasonably.

Project Co will cause the Equipment Consultant to:

- (a) participate in the design development process as described in Section 5.4 of Schedule 2 [Design and Construction Protocols], including to attend relevant consultations with the User Consultation Group and to identify and address issues related to Equipment;
- (b) consult regularly with the Authority throughout the procurement process described in Section 3 of this Appendix, including as reasonably requested by the Authority;
- (c) as part of the drafting process, review and provide input on any competitive bidding documents required pursuant to Section 4.1(a) of this Appendix; and
- (d) contribute to and review the analysis and recommendations included in each of Project Co's reports to the Authority pursuant to Section 4.2 of this Appendix.

5.8 Title

Project Co will:

- (a) cause the procurement arrangements for Category C Equipment, Category D1 Equipment and Category D2 Equipment to provide for a transfer of title to such Equipment to the Authority immediately upon the later of:
 - (1) the Service Commencement Date; and
 - (2) the date that Project Co completes, in accordance with Section 5.3 of this Appendix, the Acceptance Protocol for the relevant item of Category C Equipment, Category D1 Equipment and Category D2 Equipment; and
- (b) pay (including as agent for the Authority only for purposes of payment from the Equipment Cash Allowance Account with respect to Category C Equipment and Category D2 Equipment) all unpaid suppliers prior to the Service Commencement Date(s) for amounts owing on outstanding invoices (up to the amounts approved by the Authority in accordance with Section 4.3).

5.9 Minimizing Disruptions

Project Co will ensure that its procurement, Delivery, Setup, Installation, Commissioning, maintenance, repair, decommissioning, upgrading and replacement of Equipment as required under this Agreement will be effective and efficient so as to minimize to the greatest extent reasonably possible all disruptions of Authority Activities and any additional costs to the Authority.

6. RELOCATED EQUIPMENT, OFFICE MOVES AND MISCELLANEOUS WALL-MOUNTED ITEMS

6.1 Relocated Equipment

Project Co will, at its cost, coordinate and, directly or through a Sub-Contractor consented to by the Authority, provide relocation services to the Authority for the purpose of relocating Equipment (including Category A Equipment and/or Category B Equipment, if applicable) from the Existing Hospital to the Facility in accordance with the approved Phasing Plan. Project Co or the Sub-Contractor, as applicable, shall provide such relocation services in accordance with all confidentiality obligations under this Agreement and all applicable Law and policies of the Authority, including policies related to the protection and privacy of personal and confidential information.

6.2 Office Moves

Project Co will, at its cost, coordinate and, directly or through a Sub-Contractor consented to by the Authority, provide moving services to the Authority for the purpose of moving office contents from the Existing Hospital to the Facility in accordance with the approved Phasing Plan. Project Co or the Sub-Contractor, as applicable, shall provide such moving services in accordance with all confidentiality obligations under this Agreement and all applicable Law and policies of the Authority, including policies related to the protection and privacy of personal and confidential information.

6.3 Miscellaneous Wall-Mounted Items

Project Co and the Authority will each designate a representative to conduct a walk-through of the Existing Hospital for the purpose of identifying and designating miscellaneous wall-mounted items (not constituting relocated Equipment) to be relocated to the Facility. Project Co will be responsible for the removal, storage, Setup and Installation (as applicable) of the identified items in accordance with the approved Phasing Plan.

6.4 Not Miscellaneous Occupant Services Request Services

Nothing in Sections 6.1, 6.2 or 6.3 will constitute Miscellaneous Occupant Services.

Endoscope Flushing Aid

MEDIVATORS®
SCOPE BUDDY®
Endoscope Flushing Aid

Visual display
of endoscope
flushing time

User-selectable
time setting

One-touch
start/stop
operation

Simple and quick
tubing connections

Consistent, hands-free flushing of endoscopes

Reduces the risk of repetitive motion injuries

- Replaces repetitive and labor-intensive syringing of channels
- Hands-free operation reduces muscle fatigue
- Simple push button operation
- Provides constant fluid delivery through all endoscope channels

Shortens manual cleaning time

- Thoroughly flushes most endoscopes in 35 seconds
- Flushes multiple endoscope channels simultaneously
- Quickly and quietly delivers detergent and rinse solutions through endoscope channels

Enhances compliance with endoscope cleaning protocols

- Continuous, timed fluid delivery ensures consistent, repeatable endoscope flushing
- Audible and visual alerts upon completion
- Compatible with all flexible endoscopes including ultrasound and those with elevator wire channels
- Works with your existing sink; compact size accommodates countertop placement or wall mounting
- Improves manual cleaning throughput

OLYMPIC STERILE-DRIERS™

*Bio-Clean Air for Safer
Drying & Packaging*

Model 44

Model 43

- Fast Drying
- HEPA Filtered Air
- Flexible & Convenient Loading
- Large Capacity

OLYMPIC STERILE-DRIERS™

- Speeds drying
- Protects the load while drying
- Provides short-term storage

Olympic Sterile-Driers offer faster drying in bio-clean air, as recommended by infection control authorities. For safety & efficiency, they are the preferred driers following pasteurization or other methods of high-level disinfection.

By the use of HEPA-filtered air, Olympic Sterile-Driers eliminate the threat of airborne pathogens recontaminating wet, warm parts while they are being dried. All air entering the drying chamber first passes through a pre-filter and then a HEPA filter which is 99.97% efficient in removing all particles larger than 0.3 micron.

And Sterile-Driers can dry more parts faster. They can handle large loads with almost any combination of tubes & parts. Faster drying is achieved by Olympic's exclusive recirculating air system that efficiently recaptures heat instead of dissipating it.

These & many other useful features have made Olympic Sterile-Driers the first choice for bio-clean air drying of respiratory and anesthesia breathing tubes and parts.

RECIRCULATING HEAT AND MA

- Pre-Filters**
Removes larger airborne particles. Front-mounted for easy replacement.
- HEPA Filters**
Separate HEPA filter for each drying chamber means greater air flow and longer filter life.

- Microprocessor-based temperature control.
- Digital Countdown Timer.
- Continuous or Timed Operation.

HEPA Filters

Certified class 100 High Efficiency. Particulate Air (HEPA) filters remove 99.97% of all particles larger than 0.3 microns that transport bacteria and viruses. Individually tested to assure entire HEPA filter system is leak-free.

Removeable Trays

Model 44 has nine large 18" x 18" (46 x 46 cm) parts trays standard. Model 43 has three 18" x 18" (46 x 46 cm) trays and six 18" x 9" (46 x 23 cm) half trays standard. Nylon coated to be cool to touch.

ANY OTHER EXCLUSIVE FEATURES

Separate Blowers

Each drying chamber has own blower for quieter operation & greater air volume.

Heaters

Thermostatically controlled.

Recirculating Heat— For Faster Drying

More than 80% of heated air captured & recirculated through HEPA filters results in faster, more efficient drying. Typical time is 40 minutes.

Forced Vertical Airflow

Tubes dry faster because air is forced through interior lumen of each tube.

See-Thru Doors

On all models.

Rust-Proof

All aluminum construction.

Outside Vent Attachment

(Optional, not shown).

Model 44

Large drying capacity can handle full load from an Olympic Pasteurmatic. Model 44 shown with extra trays.

Model 43

Fast drying of tubes and parts.

Bag Drier

Optional Bag Drier solves the problem of drying both the inside and outside of breathing bags after pasteurization. Slides into any Sterile-Drier model manufactured since 1984 and dries up to 16 bags at once.

Slide-Out Tube Holder

Easy-loading tube-holders slide out at convenient height. Holds 35 tubes up to 5 ft. (1.5 m) long. Tube-holders can be replaced with more parts trays or Bag Drier.

More Good Reasons for Selecting Olympic Sterile-Driers

Safety Features

Over-temperature thermal cut-offs on heaters and blower motors. Individually fused, 3-wire hospital-grade electrical connectors. Each Sterile-Drier individually tested for 1,350-volt dielectric insulation.

Electrical Safety

CSA C/US certified to CSA C22.2 1010-1 and UL 61010A-1.

Department Layout Planning

Your Olympic representative can help you lay out an efficient decontamination area, including Sterile-Driers, and Olympic Pasteuramics.

Warranty

Olympic Sterile-Driers are covered by a one-year warranty on parts.

Ordering Information

OLYMPIC STERILE-DRIERS

Model 44 - With 9 full-size parts drying trays and tube-holder for 35 tubes. 46.5" x 20.5" x 86" (118 x 52 x 218 cm). 120V~, 60 Hz, 1700 watts.

CAT. NO. 54344

Model 43 - With 3 full-size parts drying trays, 6 half-size parts drying trays, and tube-holder for 35 tubes. 26" x 20.5" x 86" (66 x 52 x 218 cm). 120V~, 60 Hz, 900 watts.

CAT. NO. 54343

NOTE: All Driers available with optional rear doors and additional trays and tube holders.

ACCESSORIES

Bag Drier - For use with any Olympic Sterile-Drier manufactured since 1984.

- Protects the load while drying
- Provides short-term storage

Olympic Sterile-Driers offer faster drying in bio-clean air, as recommended by infection control authorities. For safety & efficiency, they are the preferred driers following pasteurization or other methods of high-level disinfection.

By the use of HEPA-filtered air, Olympic Sterile-Driers eliminate the threat of airborne pathogens recontaminating wet, warm parts while they are being dried. All air entering the drying chamber first passes through a pre-filter and then a HEPA filter which is 99.97% efficient in removing all particles larger than 0.3 micron.

And Sterile-Driers can dry more parts faster. They can handle large loads with almost any combination of tubes & parts. Faster drying is achieved by Olympic's exclusive recirculating air system that efficiently recaptures heat instead of dissipating it.

These & many other useful features have made Olympic Sterile-Driers the first choice for bio-clean air drying of respiratory and anesthesia breathing tubes and parts.

RECIRCULATING HEAT AND MA

- Pre-Filters**
Removes larger airborne particles. Front-mounted for easy replacement.
- HEPA Filters**
Separate HEPA filter for each drying chamber means greater air flow and longer filter life.

- Microprocessor-based temperature control.
- Digital Countdown Timer.
- Continuous or Timed Operation.

HEPA Filters

Certified class 100 High Efficiency. Particulate Air (HEPA) filters remove 99.97% of all particles larger than 0.3 microns that transport bacteria and viruses. Individually tested to assure entire HEPA filter system is leak-free.

Removeable Trays

Model 44 has nine large 18" x 18" (46 x 46 cm) parts trays standard. Model 43 has three 18" x 18" (46 x 46 cm) trays and six 18" x 9" (46 x 23 cm) half trays standard. Nylon coated to be cool to touch.

ANY OTHER EXCLUSIVE FEATURES

Separate Blowers

Each drying chamber has own blower for quieter operation & greater air volume.

Heaters

Thermostatically controlled.

Recirculating Heat— For Faster Drying

More than 80% of heated air captured & recirculated through HEPA filters results in faster, more efficient drying. Typical time is 40 minutes.

Forced Vertical Airflow

Tubes dry faster because air is forced through interior lumen of each tube.

See-Thru Doors

On all models.

Rust-Proof

All aluminum construction.

Outside Vent Attachment

(Optional, not shown).

Model 44

Large drying capacity can handle full load from an Olympic Pasteurmatic. Model 44 shown with extra trays.

Model 43

Fast drying of tubes and parts.

Bag Drier

Optional Bag Drier solves the problem of drying both the inside and outside of breathing bags after pasteurization. Slides into any Sterile-Drier model manufactured since 1984 and dries up to 16 bags at once.

Slide-Out Tube Holder

Easy-loading tube-holders slide out at convenient height. Holds 35 tubes up to 5 ft. (1.5 m) long. Tube-holders can be replaced with more parts trays or Bag Drier.

More Good Reasons for Selecting Olympic Sterile-Driers

Safety Features

Over-temperature thermal cut-offs on heaters and blower motors. Individually fused, 3-wire hospital-grade electrical connectors. Each Sterile-Drier individually tested for 1,350-volt dielectric insulation.

Electrical Safety

CSA C/US certified to CSA C22.2 1010-1 and UL 61010A-1.

Department Layout Planning

Your Olympic representative can help you lay out an efficient decontamination area, including Sterile-Driers, and Olympic Pasteuramics.

Warranty

Olympic Sterile-Driers are covered by a one-year warranty on parts.

Ordering Information

OLYMPIC STERILE-DRIERS

Model 44 - With 9 full-size parts drying trays and tube-holder for 35 tubes. 46.5" x 20.5" x 86" (118 x 52 x 218 cm). 120V~, 60 Hz, 1700 watts.

CAT. NO. 54344

Model 43 - With 3 full-size parts drying trays, 6 half-size parts drying trays, and tube-holder for 35 tubes. 26" x 20.5" x 86" (66 x 52 x 218 cm). 120V~, 60 Hz, 900 watts.

CAT. NO. 54343

NOTE: All Driers available with optional rear doors and additional trays and tube holders.

ACCESSORIES

Bag Drier - For use with any Olympic Sterile-Drier manufactured since 1984.

CAT. NO. 54355

*For high-level disinfection,
combine pasteurization
with bio-clean drying*

OLYMPIC PASTEURMATIC™ 3000/3500

Washes & pasteurizes in one completely automatic cycle, with minimal labor & handling.

GENERAL PRODUCT INFORMATION

EXPERIENCE

Master-Bilt has been a manufacturer of quality refrigeration equipment of all types for over 65 years and a pioneer in the use of foam insulation since the early 1950s. Master-Bilt has designed and built well over 100,000 refrigerated buildings and cabinets using time-proven urethane foamed-in-place construction. A complete sales and engineering staff is available to work with you in designing the appropriate, technically correct refrigerated structure for your needs.

FOAMED-IN-PLACE PANEL CONSTRUCTION

Master-Bilt pour-type, foamed-in-place panels are offered in standard 4" thickness with optional 5" and 6" thicknesses. They are formed of rigid urethane insulation having a 97% closed cell content to prevent moisture absorption. All panels are interchangeable, precision-formed and feature bulb-type, NSF-listed gaskets. These gaskets are foamed-in-place on the interior and exterior edge

Typical cam-lock connector system showing the cam-lock before actuation (left side) and after.

of each panel to additionally assure a sound, airtight seam at all joints of adjoining panels.

Master-Bilt's standard panel finish is 26 gauge stucco galvalume. However, numerous interior and exterior finish options are available including stucco aluminum, stainless steel, stucco stainless steel, galvanized steel and painted steel. These metals may also be used in combination to provide different finishes for exterior and interior.

THOROUGH TESTING

Master-Bilt walk-in panels are subjected to rigorous independent testing for structural strength and are toxicity evaluated. We have earned the following listings, classifications and certifications:

listing on doors

- Los Angeles Research #RR25169
- State of Oregon
- State of Wisconsin
- City of Houston, Texas

GENERAL PRODUCT INFORMATION

In addition, Master-Bilt walk-ins meet the following building codes:

- International Conference of Building Officials (Uniform Building Code)
- Building Officials Conference of America
- Southern Building Code Congress

Reports available on request.

FLOOR PANEL CONSTRUCTION

Master-Bilt's polyurethane foamed-in-place floor panels are similar in construction to wall panels with respect to dimensions. When properly supported, floor panels are built to withstand evenly distributed loads up to 700 pounds per square foot (stationary load). All floor panels are connected one to another by placing the foamed tongue of one panel into the foamed groove of the adjoining panel and actuating the cam-action locking device. See Section 6 "Floors and Ceilings" for more information.

VERSATILITY

The basic modular construction of Master-Bilt coolers and freezers makes it a simple matter to disassemble, enlarge or relocate Master-Bilt refrigerated structures according to the demands of your particular business. Cam-lock panel connectors permit easy assembly and leakage resistant, panel-to-panel seams. Master-Bilt refrigerated structures may be designed to function under your existing roof or as a freestanding structure.

Typical panel exterior showing cam-lock connector.

GENERAL PRODUCT INFORMATION

DOOR CONSTRUCTION

Master-Bilt's infitting doors, made with polyurethane foamed-in-place insulation, are lightweight for easy operation. The insulation tenaciously adheres to the interior and exterior metal pan to provide rugged, one-piece durability. Each door is fitted with spring-loaded, cam-lift hinges and heavy-duty hydraulic door closures for effortless closing. An airtight seal is assured by the wide surface, magnetic gasket around the door. The door handle is provided with a deadbolt lock for added security. Low wattage, anti-sweat heaters are concealed in the perimeter of freezer doors and jambs to prevent condensation or frost ac-

cumulation in areas of high humidity. Master-Bilt standard V-Series doors are constructed with a vinyl frame with a heavy-gauge steel backup. A 1/4" thick steel support plate is welded to the frame at hinge locations to provide support for the hinges. **Field-adjustable hinge backing plates, designed to compensate for any necessary future door adjustment without removal of the door or its frame, are found only in Master-Bilt doors.** All these construction features add up to an efficient door which will close tightly and effortlessly every time. See Section 5 "Doors" for further information.

REFRIGERATION

Master-Bilt offers remote refrigeration systems, including condensing unit and evaporator coil, ranging from 1/2 to 40 H.P. as well as modular multi-compressor systems and packaged systems. All units are factory tested before shipping. Section 8 "Refrigeration Systems" contains more information on this subject.

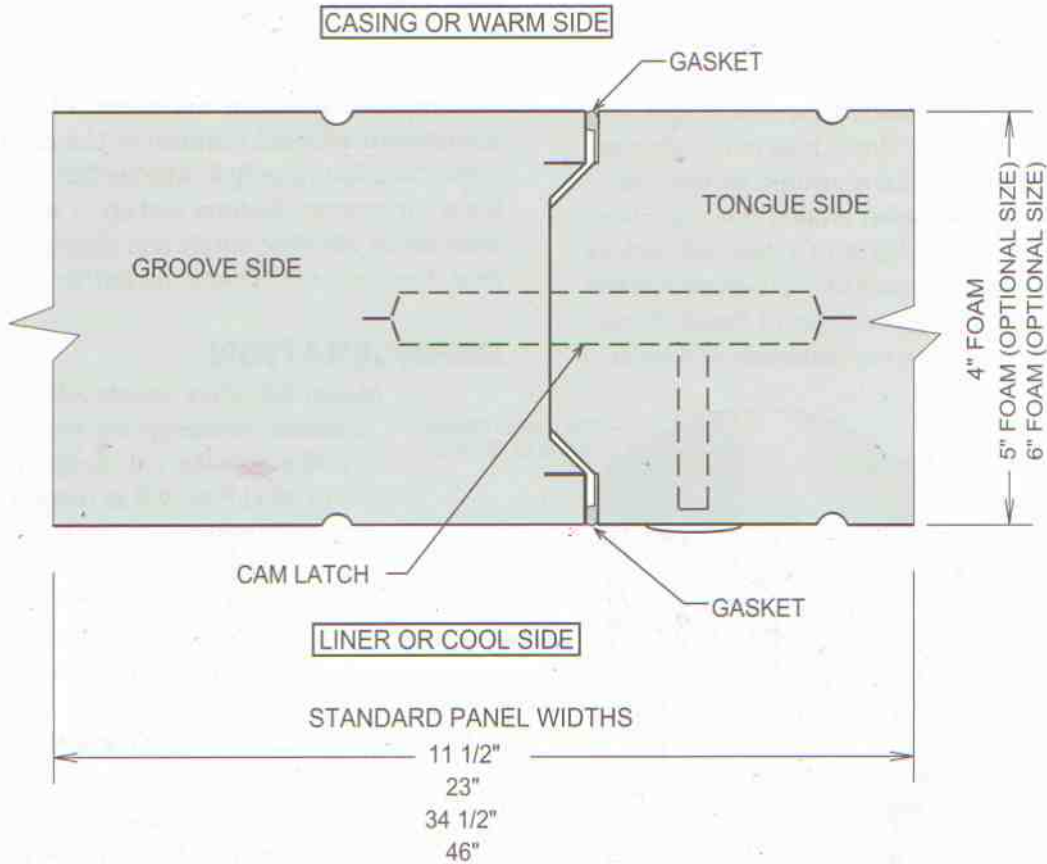

ACCESSORIES

Optional or alternate equipment and accessories for Master-Bilt refrigerated structures include: stainless steel welded wire shelving, floor mats, observation windows, hinged glass merchandising doors, pressure relief ports, door ramps, dial thermometers, sliding cold storage doors, protective roof systems, structural steel support and more. See Section 9 "Options and Accessories" for additional information.

SPACEMIZER

ELECTRIC DEFROST UNIT COOLERS

MODEL SME

UNIT FEATURES

- For applications of +34°F to -20°F (+1°C to -29°C).
- Compact! Gives more usable space in refrigerated area.
- Low height gives more head room and allows product to be stacked higher.
- Allows shelving and storage of product around all walls.
- Heavy gauge grained aluminum cabinet cleans easily and looks attractive.
- Stainless steel screws prevent rust streaks.
- PVC coated fan guards won't rust or rattle.
- Generous coil surface gives proper compressor balance.
- High-efficiency aluminum fins with full collars cover mechanically expanded copper tubes.
- Sizes to match 3/4 though 3 H.P. condensing units.
- Coils dehydrated and sealed at the factory.
- Motors life-lubricated and thermally protected.
- Factory wired — ready to install.
- Easy to install and service — panels on ends quickly remove for complete access to refrigerant components and electrical terminal block — no need to drop fan panel/drain pan.
- Highest quality tubular heaters provide fast and economical defrost.
- Controls are mounted and wired to a terminal board.
- Quick disconnect, waterproof plug and receptacle for each motor.
- Options include timers, defrost control kits, and heat exchangers.

* = T for Outdoor, N for Indoor, B for Bohnmizer, M for Beacon

++ = See back page for details ¹ = Estimated sound pressure values are 10 feet from the unit. For estimating sound pressure from the unit at different distances, deduct the following from the unit values: 20 feet, deduct 6 dba..... for 40 feet, deduct 12 dba..... for 80 feet, deduct 18 dba. This data is typical of "free field" conditions for horizontal air cooled condensing units at the outlet of the discharge air. The actual sound measurements may vary depending on the condensing unit installation. Factors such as reflecting walls, background noise and mounting conditions may have a significant influence on this data.

METROMAX Q™ SHELVING

with *Microban Antimicrobial Product Protection

Part of the innovative MetroMax iQ™ Storage System, MetroMax Q™ is a longer life storage solution than conventional wire shelving. The product offers durable polymer mats that remove for easy cleaning and protect stored items from damage. Quick adjust shelves and MetroMax iQ accessories provides a very efficient use of storage space. MetroMax Q™ is integrated with online space planning tools and tutorials. www.metro.com/iQ

- Longer-life performance:** Durable, corrosion proof polymer mats protect the shelves from normal wear and tear. Robust epoxy coated steel frames and posts hold as much weight as Metro's wire shelving. Weight capacity for evenly distributed loads:
 800 lbs. (363kg) per shelf for lengths of 24" to 48" (610 to 1220mm)
 600 lbs. (275kg) per shelf for lengths of 54" (1370mm) or longer
 2,000 lbs. (907kg) maximum per stationary unit.
- Interchangeable:** MetroMax Q and MetroMax i™ shelves, posts, and most accessories are compatible on the same unit. Use MetroMax Q shelves with MetroMax i™ polymer posts for increased corrosion protection. Use MetroMax i™ solid shelves when spill containment is required or as a bottom shelf to protect supplies from dirt or backsplashes from mops.
- Easier to clean and maintain:** Polymer mats can be easily removed and cleaned in a sink or dish machine. Microban antimicrobial product protection is built into the high contact areas of the shelf including the mats, frames, and posts to protect the product from bacteria, mold, mildew, and fungus that cause odors and product degradation. Microban protection keeps the product "cleaner between cleanings".
- Quick to Adjust:** Patented corner release allows shelves to be unlocked without tools. Simply flip each corner release, relocate the wedge connectors on the posts, and reposition the shelf. Quickly adjust shelves to reclaim wasted vertical space.
- Smooth, Protective Surfaces:** Smooth shelf mats protect packaged items from unwanted rips, tears, or damage.
- Open Grid and Solid Mat Options:** MetroMax Q is available with open grid mats as standard. Open grid shelves promote air circulation and light penetration.
 MetroMax i™ solid shelves can be used with MetroMax Q grid shelves on the same unit and are available in 18" and 24" (457 and 610mm) depths. For 21" (530mm) deep MetroMax Q, solid mat overlays are available.
- Efficient, Organized Storage:** Premium MetroMax iQ™ accessories efficiently organize, contain, and compartmentalize **all** space between shelves.
- Quick to Assemble:** MetroMax Q assembles easily in minutes, without tools. Shelves can be adjusted at 1" (25mm) increments along the post. Shelf wedges have a window to locate your desired position.

MetroMax Q™ Polymer and Steel Shelving

9.21

Specifications

- **Shelf frames and posts:** Steel with electroplated substrate and highly durable, abrasion-resistant epoxy finish. Epoxy finish has built-in Microban antimicrobial product protection. The adjustable foot is reinforced nylon.
- **Shelf Mats:** Injection molded polypropylene with exclusive built-in Microban® antimicrobial product protection.
- **Shelf Wedge Connector:** Reinforced nylon.
- **Temperature range:** -20°F (-29°C) to 125°F (52°C) continuous use, with intermittent exposure to 200°F (93°C) for cleaning.

Standard Interchangeable Shelves

- Part number includes shelf with removable mats and one bag of wedges.
- MetroMax Q grid shelves, MetroMax i™ grid and solid shelves are all compatible on the same unit.

METROMAX Q™ POLYMER AND STEEL SHELVING

Standard Interchangeable Posts

- MetroMax Q: Epoxy coated steel with Microban antimicrobial product protection.
- MetroMax i: Polymer with Microban antimicrobial product protection.
- Stationary posts include an adjustable leveling foot to compensate for uneven floors. Leveling foot can be adjusted 1" (25mm).
- When mounting a shelving unit to a dolly base, stationary posts are used.
- Special height cut posts are available. Consult your Metro representative.

Replacement Leveling Foot:
Model No. RPM3-FOOT

Replacement Post Cap for Steel Post:
Model No. RPMQS-POSTCAP

Replacement Post Cap for Polymer Post:
Model No. RPMXS-POSTCAP

Replacement MetroMax Q Wedges
Model No. MQ9985 Bag of 4

Replacement MetroMax Q Wedges MQ9985

NOTE: Compatibility with existing Metro polymer mat shelving systems

- MQ9985 wedges are compatible with original MetroMax Q shelves and posts.
- The post centers on MetroMax Q have been changed to allow interchangeability with MetroMax i™ shelves. MetroMax Q shelves manufactured within or after April 2009 are not compatible with Q shelves made prior to April 2009.
- MetroMax Q is not compatible with original MetroMax manufactured prior to April 2009.
- Posts listed in above table (ex. MQ74PE, MX74PE) can be used with original MetroMax Q shelves made prior to April 2009.

Post Clamp

Adds stability by joining posts of two separate units together. With it, each unit is supported by four posts and buttressed by the adjacent unit.

Model No. 9994X

Foot Plate

Use to add stability to the shelving unit or to bolt units to the floor.

Model No. Zinc 9993Z

Model No. Stainless Steel 9993S

Stem Casters

A variety of stem casters are offered for MetroMax i™ mobile applications.

Stem caster models include bumpers.

See Catalog Sheet 11.20 for stem casters.

Load Rating: 3 x Stem Caster Load Rating, maximum — 900 lbs. (363kg) per stem caster cart.

Replacement Bumper M9992DBX

METROMAX Q™ POLYMER AND STEEL SHELVING

Starter and Add-On Units

- 4- and 5-tier models available. Consult the Metro catalog for models.
- Starter units: consist of shelves and (4) posts
- Add-on units: consist of shelves, (2) posts, and “S” Hooks (M9995)

“S” Hook: Used to “add on” one or multiple MetroMax Q™ storage systems while eliminating the cost of two posts per unit. Can be used to join units end-to-end, back-to-back, at right angles, etc. Two “S” hooks are required for each shelf.

Cat. No. M9995

MetroMax Q™ Intermediate

“S” Hook: Use when configuring MetroMax Q Starter and Add-On Units at right angles.

Model No. Q9995Z

	Regular “S” Hook location
	Intermediate bracket location
	Post
	Post not required

END-TO-END

“S” Hooks
M9995 — qty. 2

RIGHT ANGLES

Intermediate “S” Hook Kit
Q9995Z — qty. 1; M9995 — qty. 1

COMBINATION

Intermediate “S” Hook Kits
Q9995Z — qty. 2; M9995 — qty. 2

MetroMax Q™ Carts

- 4- and 5-tier models
- Grid shelf models
- Units consist of shelves, (4) posts, (2) swivel, and (2) swivel brake casters.
- Consult the Metro catalog for models.

Job _____

Wire Shelving

SUPER ERECTA SHELF® WIRE SHELVING

- **Unique Design:** The open wire design of these shelves minimizes dust accumulation and allows free circulation of air, greater visibility of stored items and greater light penetration.
 - **Durable Construction:** Super Erecta shelves and posts are constructed of heavy-gauge carbon steel or Type 304 stainless steel.
 - **Choice of Finishes:** Super Erecta Brite™ and chrome-plated for dry storage; Metroseal 3™ with Microban® antimicrobial product protection and stainless steel for corrosive environments; and attractive epoxy color options for merchandising applications.
 - **Versatile:** Super Erecta Shelf® wire shelving can adapt to your changing needs. By using various accessories, hundreds of shelving configurations become possible.
 - **Fast, Secure Assembly:** SiteSelect™ Posts have a double groove visual guide feature every 8" (203mm), circular grooves at 1" (25mm) increments, and are numbered at 2" (50mm) intervals. A patented, tapered split sleeve snaps together around each post. Tapered openings in the shelf corners slide over the tapered split sleeves providing a positive lock. Shelf is assembled in minutes without the use of any special tools.
 - **Adjustability:** Shelves can be adjusted at 1" (25mm) intervals along the entire length of the post.
 - **Shelf Ribs:** Run front to back, allowing you to slide items on and off shelves smoothly.
 - **Shelf Accessibility:** Shelves can be loaded/unloaded easily from all sides. This open construction allows maximum use of storage cube.
 - **Adjustable Feet:** Bolt levelers compensate for surface irregularities.
- Note:** Stainless stationary posts are equipped with stainless steel leveling feet.

Wire Shelves

Split Sleeve

Aluminum Split Sleeve

- **Metroseal 3:** Metro's proprietary epoxy coating contains Microban® antimicrobial product protection. Microban antimicrobial protects the epoxy coating from bacteria, mold, mildew, and fungus that cause odors, stains, and product degradation.
- See spec sheet 10.14 for epoxy color options.
- Plastic split sleeves are included with each shelf
Replacements are available: Cat. No. 9985 (bag of 4)
- Aluminum split sleeves are recommended for abusive mobile applications and autoclave applications.
Cat. No. 9986Z (bag of 4 with zinc C-rings)
Cat. No. 9986S (bag of 4 with stainless steel C-rings)
- Load capacity (evenly distributed) per shelf
Depths: 14" to 24" (355 to 610mm)
800 lbs. (363kg) for lengths of 18" to 48" (457 to 1219mm)
600 lbs. (272kg) for lengths of 54" (1370mm) or longer
- Load capacity (evenly distributed) per unit.
Stationary shelving units have a maximum load capacity (evenly distributed) of 2,000 lbs. (907kg)
Mobile units have a maximum capacity of three times the caster load rating up to but not exceeding 1,000 lbs. (453kg) total. Consult the Metro catalog for caster load ratings
- SUPER ERECTA SHELF meets Government Specifications MIL-S-40144E.

Special Length Posts

Special length cut posts are available. Consult your Metro representative for more information.

SUPER ERECTA SHELF® WIRE SHELVING

Super Wide Shelving

- **High-density Storage:** Super Wide™ shelves have a greater storage area for holding large quantities of supplies, especially large, bulky objects, providing maximum storage in minimum space.
- **Load Capacity** (evenly distributed) per shelf:
Depths: 30" and 36" (760 and 914mm)
600 lbs. (272kg) for lengths 48" (1219mm) or shorter.
400 lbs. (181kg) for lengths 54" (1370mm) or longer.

Foot Plates

- Use to bolt units to the floor, or when a broader, more stable foot is desired. Foot plates also help to protect floors by distributing the point load of the shelving unit across a larger contact point.
- Foot plates (completely tightened) add 1/8" (3mm) to the specified heights of each stationary post on the table.
Zinc Cat. No. 9993Z
Stainless Steel Cat. No. 9993S

"S" Hook

- Used to add on shelving units with only two posts required. Order two per shelf level.
Cat. No. 9995Z

GENERAL PRODUCT INFORMATION

EXPERIENCE

Master-Bilt has been a manufacturer of quality refrigeration equipment of all types for over 65 years and a pioneer in the use of foam insulation since the early 1950s. Master-Bilt has designed and built well over 100,000 refrigerated buildings and cabinets using time-proven urethane foamed-in-place construction. A complete sales and engineering staff is available to work with you in designing the appropriate, technically correct refrigerated structure for your needs.

FOAMED-IN-PLACE PANEL CONSTRUCTION

Master-Bilt pour-type, foamed-in-place panels are offered in standard 4" thickness with optional 5" and 6" thicknesses. They are formed of rigid urethane insulation having a 97% closed cell content to prevent moisture absorption. All panels are interchangeable, precision-formed and feature bulb-type, NSF-listed gaskets. These gaskets are foamed-in-place on the interior and exterior edge

Typical cam-lock connector system showing the cam-lock before actuation (left side) and after.

of each panel to additionally assure a sound, airtight seam at all joints of adjoining panels.

Master-Bilt's standard panel finish is 26 gauge stucco galvalume. However, numerous interior and exterior finish options are available including stucco aluminum, stainless steel, stucco stainless steel, galvanized steel and painted steel. These metals may also be used in combination to provide different finishes for exterior and interior.

THOROUGH TESTING

Master-Bilt walk-in panels are subjected to rigorous independent testing for structural strength and are toxicity evaluated. We have earned the following listings, classifications and certifications:

 listing on doors	 listing on doors	
 FM-4880 Class 1 (Panels with stainless steel, painted steel or galvalume finish)	 MIAMI-DADE COUNTY Dade County, Florida acceptance #05-1222.05. Renewable after Feb. 6, 2011	

- Foam core tested by Underwriters Laboratories, Inc. (file R5692) per UL 723 with the following results: Flame spread 20, smoke 450 @ 6" maximum
- Foam core tested by Factory Mutual (project #3022512) per ASTM E84-03 with the following results: Flame spread 25, smoke 400 @ 4" thickness
- ASTM E84-94A, ASTM E711-87 (1992), ASTM D1929-91A, ASTM D482-91, ASTM D1622-93
- N.Y.C. approval #59-85
- State of California TD 1102
- Los Angeles Research #RR25169
- State of Oregon
- State of Wisconsin
- City of Houston, Texas

GENERAL PRODUCT INFORMATION

In addition, Master-Bilt walk-ins meet the following building codes:

- International Conference of Building Officials (Uniform Building Code)
- Building Officials Conference of America
- Southern Building Code Congress

Reports available on request.

FLOOR PANEL CONSTRUCTION

Master-Bilt's polyurethane foamed-in-place floor panels are similar in construction to wall panels with respect to dimensions. When properly supported, floor panels are built to withstand evenly distributed loads up to 700 pounds per square foot (stationary load). All floor panels are connected one to another by placing the foamed tongue of one panel into the foamed groove of the adjoining panel and actuating the cam-action locking device. See Section 6 "Floors and Ceilings" for more information.

VERSATILITY

The basic modular construction of Master-Bilt coolers and freezers makes it a simple matter to disassemble, enlarge or relocate Master-Bilt refrigerated structures according to the demands of your particular business. Cam-lock panel connectors permit easy assembly and leakage resistant, panel-to-panel seams. Master-Bilt refrigerated structures may be designed to function under your existing roof or as a freestanding structure.

Typical panel exterior showing cam-lock connector.

GENERAL PRODUCT INFORMATION

DOOR CONSTRUCTION

Master-Bilt's infitting doors, made with polyurethane foamed-in-place insulation, are lightweight for easy operation. The insulation tenaciously adheres to the interior and exterior metal pan to provide rugged, one-piece durability. Each door is fitted with spring-loaded, cam-lift hinges and heavy-duty hydraulic door closures for effortless closing. An airtight seal is assured by the wide surface, magnetic gasket around the door. The door handle is provided with a deadbolt lock for added security. Low wattage, anti-sweat heaters are concealed in the perimeter of freezer doors and jambs to prevent condensation or frost ac-

cumulation in areas of high humidity. Master-Bilt standard V-Series doors are constructed with a vinyl frame with a heavy-gauge steel backup. A 1/4" thick steel support plate is welded to the frame at hinge locations to provide support for the hinges. **Field-adjustable hinge backing plates, designed to compensate for any necessary future door adjustment without removal of the door or its frame, are found only in Master-Bilt doors.** All these construction features add up to an efficient door which will close tightly and effortlessly every time. See Section 5 "Doors" for further information.

REFRIGERATION

Master-Bilt offers remote refrigeration systems, including condensing unit and evaporator coil, ranging from 1/2 to 40 H.P. as well as modular multi-compressor systems and packaged systems. All units are factory tested before shipping. Section 8 "Refrigeration Systems" contains more information on this subject.

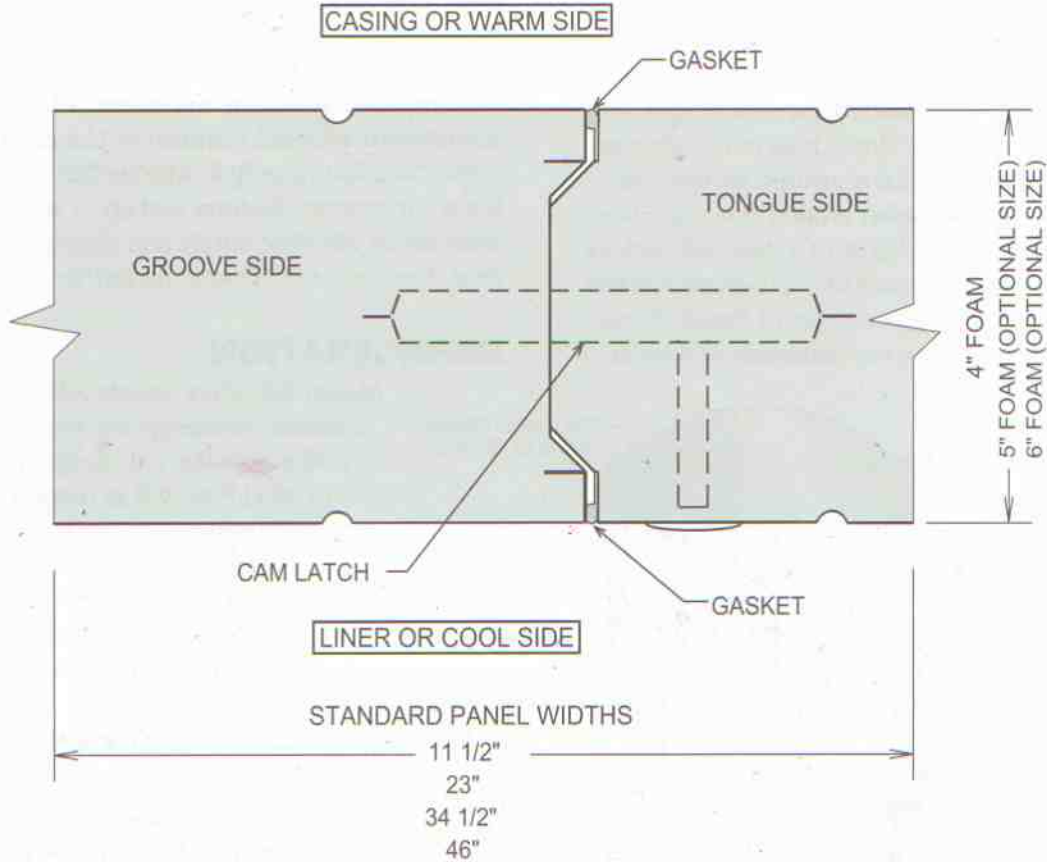

ACCESSORIES

Optional or alternate equipment and accessories for Master-Bilt refrigerated structures include: stainless steel welded wire shelving, floor mats, observation windows, hinged glass merchandising doors, pressure relief ports, door ramps, dial thermometers, sliding cold storage doors, protective roof systems, structural steel support and more. See Section 9 "Options and Accessories" for additional information.

SPACEMIZER™ MODEL SM AIR DEFROST UNIT COOLERS

UNIT FEATURES

- For applications of +35°F (+2°C) and above.
- Compact! Gives more usable space in refrigerated area.
- Low height gives more head room and allows product to be stacked higher.
- Allows shelving and storage of product around all walls.
- Gentle air movement from center of cooler stabilizes temperature and humidity - keeps product fresh longer - looks better, less drying, less weight loss - more profit!
- Heavy gauge grained aluminum cabinet cleans easily and looks attractive.
- Stainless steel screws prevent rust streaks.
- PVC coated fan guards won't rust or rattle.
- Dual drain pans prevent sweating.
- Generous coil surface gives proper compressor balance.
- High-efficiency aluminum fins with full collars cover mechanically expanded copper tubes.
- Sizes to match 3/4 through 3 H.P. condensing units.
- Coils dehydrated and sealed at the factory.
- Motors life-lubricated and thermally protected.
- Factory wired — ready to install.
- Easy to install and service — panels on ends quickly remove for complete access to refrigerant components — no need to drop fan panel/drain pan.
- Optional 208/230 volt and PSC motors available.
- PSC motors standard on 50 Hz.

* = T for Outdoor, N for Indoor, B for Bohnmizer, M for Beacon

++ = See back page for details ¹ = Estimated sound pressure values are 10 feet from the unit. For estimating sound pressure from the unit at different distances, deduct the following from the unit values: 20 feet, deduct 6 dba..... for 40 feet, deduct 12 dba..... for 80 feet, deduct 18 dba. This data is typical of "free field" conditions for horizontal air cooled condensing units at the outlet of the discharge air. The actual sound measurements may vary depending on the condensing unit installation. Factors such as reflecting walls, background noise and mounting conditions may have a significant influence on this data.

METROMAX Q™ SHELVING

with *Microban Antimicrobial Product Protection

Part of the innovative MetroMax iQ™ Storage System, MetroMax Q™ is a longer life storage solution than conventional wire shelving. The product offers durable polymer mats that remove for easy cleaning and protect stored items from damage. Quick adjust shelves and MetroMax iQ accessories provides a very efficient use of storage space. MetroMax Q™ is integrated with online space planning tools and tutorials. www.metro.com/iQ

- **Longer-life performance:** Durable, corrosion proof polymer mats protect the shelves from normal wear and tear. Robust epoxy coated steel frames and posts hold as much weight as Metro's wire shelving. Weight capacity for evenly distributed loads:
800 lbs. (363kg) per shelf for lengths of 24" to 48" (610 to 1220mm)
600 lbs. (275kg) per shelf for lengths of 54" (1370mm) or longer
2,000 lbs. (907kg) maximum per stationary unit.
- **Interchangeable:** MetroMax Q and MetroMax i™ shelves, posts, and most accessories are compatible on the same unit. Use MetroMax Q shelves with MetroMax i™ polymer posts for increased corrosion protection. Use MetroMax i™ solid shelves when spill containment is required or as a bottom shelf to protect supplies from dirt or backsplashes from mops.
- **Easier to clean and maintain:** Polymer mats can be easily removed and cleaned in a sink or dish machine. Microban antimicrobial product protection is built into the high contact areas of the shelf including the mats, frames, and posts to protect the product from bacteria, mold, mildew, and fungus that cause odors and product degradation. Microban protection keeps the product "cleaner between cleanings".
- **Quick to Adjust:** Patented corner release allows shelves to be unlocked without tools. Simply flip each corner release, relocate the wedge connectors on the posts, and reposition the shelf. Quickly adjust shelves to reclaim wasted vertical space.
- **Smooth, Protective Surfaces:** Smooth shelf mats protect packaged items from unwanted rips, tears, or damage.
- **Open Grid and Solid Mat Options:** MetroMax Q is available with open grid mats as standard. Open grid shelves promote air circulation and light penetration.
MetroMax i™ solid shelves can be used with MetroMax Q grid shelves on the same unit and are available in 18" and 24" (457 and 610mm) depths. For 21" (530mm) deep MetroMax Q, solid mat overlays are available.
- **Efficient, Organized Storage:** Premium MetroMax iQ™ accessories efficiently organize, contain, and compartmentalize **all** space between shelves.
- **Quick to Assemble:** MetroMax Q assembles easily in minutes, without tools. Shelves can be adjusted at 1" (25mm) increments along the post. Shelf wedges have a window to locate your desired position.

MetroMax Q Mobile Unit

MetroMax Q with Accessories and MetroMax i Solid Bottom Shelf

MetroMax Q™ Polymer and Steel Shelving

9.21

Specifications

- **Shelf frames and posts:** Steel with electroplated substrate and highly durable, abrasion-resistant epoxy finish. Epoxy finish has built-in Microban antimicrobial product protection. The adjustable foot is reinforced nylon.
- **Shelf Mats:** Injection molded polypropylene with exclusive built-in Microban® antimicrobial product protection.
- **Shelf Wedge Connector:** Reinforced nylon.
- **Temperature range:** -20°F (-29°C) to 125°F (52°C) continuous use, with intermittent exposure to 200°F (93°C) for cleaning.

Standard Interchangeable Shelves

- Part number includes shelf with removable mats and one bag of wedges.
- MetroMax Q grid shelves, MetroMax i™ grid and solid shelves are all compatible on the same unit.

Length: Subtract 3/16" (5mm) from nominal size.

MetroMax Q Open Grid Shelf

MetroMax i™ Solid Shelf

Heavy-Duty Dunnage Shelves

- Corrosion proof MetroMax i™ dunnage shelf is compatible with MetroMax Q.
- Open grid and solid version available.
- Weight capacity per shelf evenly distributed: 1,200 lbs. (544kg) on shelves up to and including 48" (1220mm) long; 900 lbs. (408kg) for shelves 60" (1524mm) long.
- Dunnage shelves are recommended for use on units with four posts.

METROMAX Q™ POLYMER AND STEEL SHELVING

Standard Interchangeable Posts

- MetroMax Q: Epoxy coated steel with Microban antimicrobial product protection.
- MetroMax i: Polymer with Microban antimicrobial product protection.
- Stationary posts include an adjustable leveling foot to compensate for uneven floors. Leveling foot can be adjusted 1" (25mm).
- When mounting a shelving unit to a dolly base, stationary posts are used.
- Special height cut posts are available. Consult your Metro representative.

Replacement Leveling Foot:
Model No. RPM3-FOOT

Replacement Post Cap for Steel Post:
Model No. RPMQS-POSTCAP

Replacement Post Cap for Polymer Post:
Model No. RPMXS-POSTCAP

Replacement MetroMax Q Wedges
Model No. MQ9985 Bag of 4

NOTE: Compatibility with existing Metro polymer mat shelving systems

- MQ9985 wedges are compatible with original MetroMax Q shelves and posts.
- The post centers on MetroMax Q have been changed to allow interchangeability with MetroMax i™ shelves. MetroMax Q shelves manufactured within or after April 2009 are not compatible with Q shelves made prior to April 2009.
- MetroMax Q is not compatible with original MetroMax manufactured prior to April 2009.
- Posts listed in above table (ex. MQ74PE, MX74PE) can be used with original MetroMax Q shelves made prior to April 2009.

Post Clamp

Adds stability by joining posts of two separate units together. With it, each unit is supported by four posts and buttressed by the adjacent unit.

Model No. 9994X

Foot Plate

Use to add stability to the shelving unit or to bolt units to the floor.

Model No. Zinc 9993Z

Model No. Stainless Steel 9993S

Stem Casters

A variety of stem casters are offered for MetroMax i™ mobile applications.

Stem caster models include bumpers.

See Catalog Sheet 11.20 for stem casters.

Load Rating: 3 x Stem Caster Load Rating, maximum — 900 lbs. (363kg) per stem caster cart.

METROMAX Q™ POLYMER AND STEEL SHELVING

Starter and Add-On Units

- 4- and 5-tier models available. Consult the Metro catalog for models.
- Starter units: consist of shelves and (4) posts
- Add-on units: consist of shelves, (2) posts, and “S” Hooks (M9995)

“S” Hook: Used to “add on” one or multiple MetroMax Q™ storage systems while eliminating the cost of two posts per unit. Can be used to join units end-to-end, back-to-back, at right angles, etc. Two “S” hooks are required for each shelf.

Cat. No. M9995

MetroMax Q™ Intermediate

“S” Hook: Use when configuring MetroMax Q Starter and Add-On Units at right angles.

Model No. Q9995Z

	Regular “S” Hook location
	Intermediate bracket location
	Post
	Post not required

END-TO-END

“S” Hooks
M9995 — qty. 2

RIGHT ANGLES

Intermediate “S” Hook Kit
Q9995Z — qty. 1; M9995 — qty. 1

COMBINATION

Intermediate “S” Hook Kits
Q9995Z — qty. 2; M9995 — qty. 2

MetroMax Q™ Carts

- 4- and 5-tier models
- Grid shelf models
- Units consist of shelves, (4) posts, (2) swivel, and (2) swivel brake casters.
- Consult the Metro catalog for models.

GENERAL PRODUCT INFORMATION

EXPERIENCE

Master-Bilt has been a manufacturer of quality refrigeration equipment of all types for over 65 years and a pioneer in the use of foam insulation since the early 1950s. Master-Bilt has designed and built well over 100,000 refrigerated buildings and cabinets using time-proven urethane foamed-in-place construction. A complete sales and engineering staff is available to work with you in designing the appropriate, technically correct refrigerated structure for your needs.

FOAMED-IN-PLACE PANEL CONSTRUCTION

Master-Bilt pour-type, foamed-in-place panels are offered in standard 4" thickness with optional 5" and 6" thicknesses. They are formed of rigid urethane insulation having a 97% closed cell content to prevent moisture absorption. All panels are interchangeable, precision-formed and feature bulb-type, NSF-listed gaskets. These gaskets are foamed-in-place on the interior and exterior edge

Typical cam-lock connector system showing the cam-lock before actuation (left side) and after.

of each panel to additionally assure a sound, airtight seam at all joints of adjoining panels.

Master-Bilt's standard panel finish is 26 gauge stucco galvalume. However, numerous interior and exterior finish options are available including stucco aluminum, stainless steel, stucco stainless steel, galvanized steel and painted steel. These metals may also be used in combination to provide different finishes for exterior and interior.

THOROUGH TESTING

Master-Bilt walk-in panels are subjected to rigorous independent testing for structural strength and are toxicity evaluated. We have earned the following listings, classifications and certifications:

- Foam core tested by Underwriters Laboratories, Inc. (file R5692) per UL 723 with the following results: Flame spread 20, smoke 450 @ 6" maximum
- Foam core tested by Factory Mutual (project #3022512) per ASTM E84-03 with the following results: Flame spread 25, smoke 400 @ 4" thickness
- ASTM E84-94A, ASTM E711-87 (1992), ASTM D1929-91A, ASTM D482-91, ASTM D1622-93
- N.Y.C. approval #59-85
- State of California TD 1102
- Los Angeles Research #RR25169
- State of Oregon
- State of Wisconsin
- City of Houston, Texas

GENERAL PRODUCT INFORMATION

In addition, Master-Bilt walk-ins meet the following building codes:

- International Conference of Building Officials (Uniform Building Code)
- Building Officials Conference of America
- Southern Building Code Congress

Reports available on request.

FLOOR PANEL CONSTRUCTION

Master-Bilt's polyurethane foamed-in-place floor panels are similar in construction to wall panels with respect to dimensions. When properly supported, floor panels are built to withstand evenly distributed loads up to 700 pounds per square foot (stationary load). All floor panels are connected one to another by placing the foamed tongue of one panel into the foamed groove of the adjoining panel and actuating the cam-action locking device. See Section 6 "Floors and Ceilings" for more information.

VERSATILITY

The basic modular construction of Master-Bilt coolers and freezers makes it a simple matter to disassemble, enlarge or relocate Master-Bilt refrigerated structures according to the demands of your particular business. Cam-lock panel connectors permit easy assembly and leakage resistant, panel-to-panel seams. Master-Bilt refrigerated structures may be designed to function under your existing roof or as a freestanding structure.

Typical panel exterior showing cam-lock connector.

INSULATION

6"	50.00	.020	.120 BTU per hour, per square foot, per inch thickness, per degree Fahrenheit

GENERAL PRODUCT INFORMATION

DOOR CONSTRUCTION

Master-Bilt's infitting doors, made with polyurethane foamed-in-place insulation, are lightweight for easy operation. The insulation tenaciously adheres to the interior and exterior metal pan to provide rugged, one-piece durability. Each door is fitted with spring-loaded, cam-lift hinges and heavy-duty hydraulic door closures for effortless closing. An airtight seal is assured by the wide surface, magnetic gasket around the door. The door handle is provided with a deadbolt lock for added security. Low wattage, anti-sweat heaters are concealed in the perimeter of freezer doors and jambs to prevent condensation or frost ac-

cumulation in areas of high humidity. Master-Bilt standard V-Series doors are constructed with a vinyl frame with a heavy-gauge steel backup. A 1/4" thick steel support plate is welded to the frame at hinge locations to provide support for the hinges. **Field-adjustable hinge backing plates, designed to compensate for any necessary future door adjustment without removal of the door or its frame, are found only in Master-Bilt doors.** All these construction features add up to an efficient door which will close tightly and effortlessly every time. See Section 5 "Doors" for further information.

REFRIGERATION

Master-Bilt offers remote refrigeration systems, including condensing unit and evaporator coil, ranging from 1/2 to 40 H.P. as well as modular multi-compressor systems and packaged systems. All units are factory tested before shipping. Section 8 "Refrigeration Systems" contains more information on this subject.

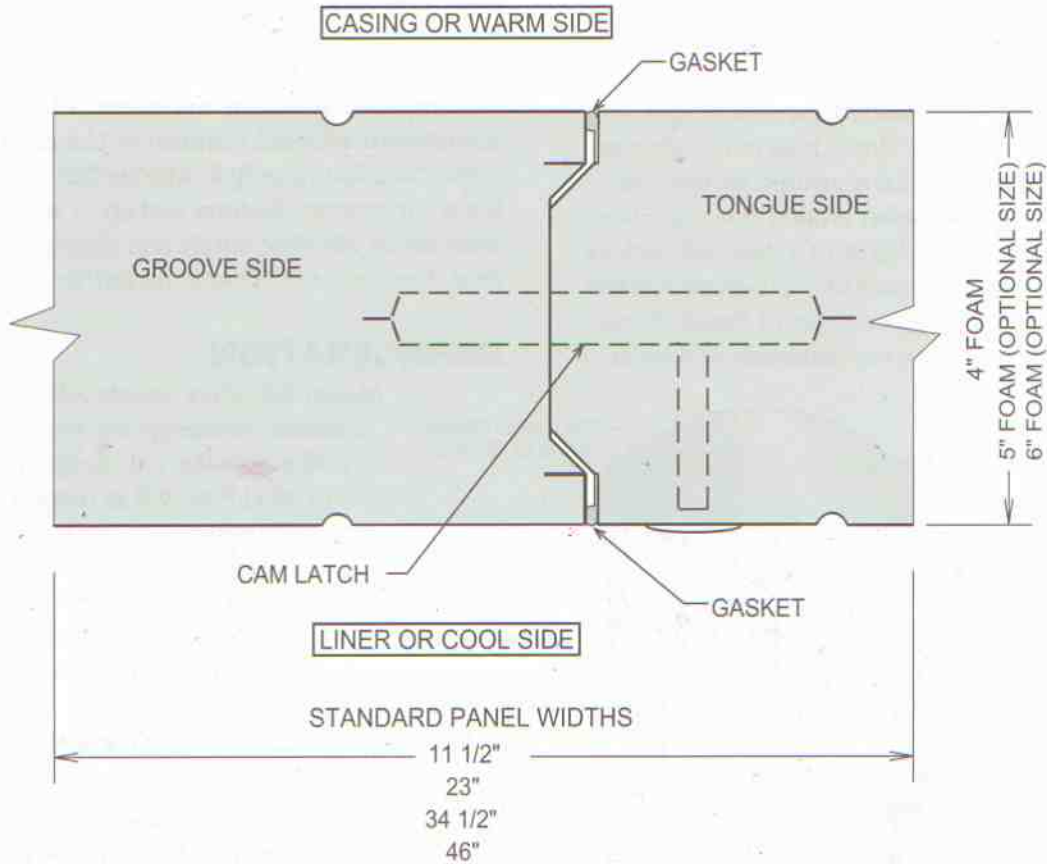

ACCESSORIES

Optional or alternate equipment and accessories for Master-Bilt refrigerated structures include: stainless steel welded wire shelving, floor mats, observation windows, hinged glass merchandising doors, pressure relief ports, door ramps, dial thermometers, sliding cold storage doors, protective roof systems, structural steel support and more. See Section 9 "Options and Accessories" for additional information.

GENERAL PRODUCT INFORMATION

STANDARD PANEL DIMENSIONS

PANEL THICKNESS	WALL PANEL MAX. HEIGHT ACTUAL	CEILING PANEL MAX. WIDTH ACTUAL
4 in. (standard)	27 ft. ¹	27 ft. ²
5 in.	24 ft. ¹	24 ft. ³
6 in.	24 ft. ¹	24 ft. ⁴

(Replaces 320.2)
AUGUST 1994

SPACEMIZER™ MODEL SM AIR DEFROST UNIT COOLERS

UNIT FEATURES

- For applications of +35°F (+2°C) and above.
- Compact! Gives more usable space in refrigerated area.
- Low height gives more head room and allows product to be stacked higher.
- Allows shelving and storage of product around all walls.
- Gentle air movement from center of cooler stabilizes temperature and humidity - keeps product fresh longer - looks better, less drying, less weight loss - more profit!
- Heavy gauge grained aluminum cabinet cleans easily and looks attractive.
- Stainless steel screws prevent rust streaks.
- PVC coated fan guards won't rust or rattle.
- Dual drain pans prevent sweating.
- Generous coil surface gives proper compressor balance.
- High-efficiency aluminum fins with full collars cover mechanically expanded copper tubes.
- Sizes to match 3/4 through 3 H.P. condensing units.
- Coils dehydrated and sealed at the factory.
- Motors life-lubricated and thermally protected.
- Factory wired — ready to install.
- Easy to install and service — panels on ends quickly remove for complete access to refrigerant components — no need to drop fan panel/drain pan.
- Optional 208/230 volt and PSC motors available.
- PSC motors standard on 50 Hz.

* = T for Outdoor, N for Indoor, B for Bohnmizer, M for Beacon

++ = See back page for details ¹ = Estimated sound pressure values are 10 feet from the unit. For estimating sound pressure from the unit at different distances, deduct the following from the unit values: 20 feet, deduct 6 dba..... for 40 feet, deduct 12 dba..... for 80 feet, deduct 18 dba. This data is typical of "free field" conditions for horizontal air cooled condensing units at the outlet of the discharge air. The actual sound measurements may vary depending on the condensing unit installation. Factors such as reflecting walls, background noise and mounting conditions may have a significant influence on this data.

METROMAX Q™ SHELVING

with *Microban Antimicrobial Product Protection

Part of the innovative MetroMax iQ™ Storage System, MetroMax Q™ is a longer life storage solution than conventional wire shelving. The product offers durable polymer mats that remove for easy cleaning and protect stored items from damage. Quick adjust shelves and MetroMax iQ accessories provides a very efficient use of storage space. MetroMax Q™ is integrated with online space planning tools and tutorials. www.metro.com/iQ

- Longer-life performance:** Durable, corrosion proof polymer mats protect the shelves from normal wear and tear. Robust epoxy coated steel frames and posts hold as much weight as Metro's wire shelving. Weight capacity for evenly distributed loads:
 800 lbs. (363kg) per shelf for lengths of 24" to 48" (610 to 1220mm)
 600 lbs. (275kg) per shelf for lengths of 54" (1370mm) or longer
 2,000 lbs. (907kg) maximum per stationary unit.
- Interchangeable:** MetroMax Q and MetroMax i™ shelves, posts, and most accessories are compatible on the same unit. Use MetroMax Q shelves with MetroMax i™ polymer posts for increased corrosion protection. Use MetroMax i™ solid shelves when spill containment is required or as a bottom shelf to protect supplies from dirt or backsplashes from mops.
- Easier to clean and maintain:** Polymer mats can be easily removed and cleaned in a sink or dish machine. Microban antimicrobial product protection is built into the high contact areas of the shelf including the mats, frames, and posts to protect the product from bacteria, mold, mildew, and fungus that cause odors and product degradation. Microban protection keeps the product "cleaner between cleanings".
- Quick to Adjust:** Patented corner release allows shelves to be unlocked without tools. Simply flip each corner release, relocate the wedge connectors on the posts, and reposition the shelf. Quickly adjust shelves to reclaim wasted vertical space.
- Smooth, Protective Surfaces:** Smooth shelf mats protect packaged items from unwanted rips, tears, or damage.
- Open Grid and Solid Mat Options:** MetroMax Q is available with open grid mats as standard. Open grid shelves promote air circulation and light penetration.
 MetroMax i™ solid shelves can be used with MetroMax Q grid shelves on the same unit and are available in 18" and 24" (457 and 610mm) depths. For 21" (530mm) deep MetroMax Q, solid mat overlays are available.
- Efficient, Organized Storage:** Premium MetroMax iQ™ accessories efficiently organize, contain, and compartmentalize **all** space between shelves.
- Quick to Assemble:** MetroMax Q assembles easily in minutes, without tools. Shelves can be adjusted at 1" (25mm) increments along the post. Shelf wedges have a window to locate your desired position.

MetroMax Q™ Polymer and Steel Shelving

9.21

Specifications

- **Shelf frames and posts:** Steel with electroplated substrate and highly durable, abrasion-resistant epoxy finish. Epoxy finish has built-in Microban antimicrobial product protection. The adjustable foot is reinforced nylon.
- **Shelf Mats:** Injection molded polypropylene with exclusive built-in Microban® antimicrobial product protection.
- **Shelf Wedge Connector:** Reinforced nylon.
- **Temperature range:** -20°F (-29°C) to 125°F (52°C) continuous use, with intermittent exposure to 200°F (93°C) for cleaning.

Standard Interchangeable Shelves

- Part number includes shelf with removable mats and one bag of wedges.
- MetroMax Q grid shelves, MetroMax i™ grid and solid shelves are all compatible on the same unit.

Length: Subtract 3/16" (5mm) from nominal size.

MetroMax Q Open Grid Shelf

MetroMax i™ Solid Shelf

Heavy-Duty Dunnage Shelves

- Corrosion proof MetroMax i™ dunnage shelf is compatible with MetroMax Q.
- Open grid and solid version available.
- Weight capacity per shelf evenly distributed: 1,200 lbs. (544kg) on shelves up to and including 48" (1220mm) long; 900 lbs. (408kg) for shelves 60" (1524mm) long.
- Dunnage shelves are recommended for use on units with four posts.

METROMAX Q™ POLYMER AND STEEL SHELVING

Standard Interchangeable Posts

- MetroMax Q: Epoxy coated steel with Microban antimicrobial product protection.
- MetroMax i: Polymer with Microban antimicrobial product protection.
- Stationary posts include an adjustable leveling foot to compensate for uneven floors. Leveling foot can be adjusted 1" (25mm).
- When mounting a shelving unit to a dolly base, stationary posts are used.
- Special height cut posts are available. Consult your Metro representative.

Replacement Leveling Foot:
Model No. RPM3-FOOT

Replacement Post Cap for Steel Post:
Model No. RPMQS-POSTCAP

Replacement Post Cap for Polymer Post:
Model No. RPMXS-POSTCAP

Replacement MetroMax Q Wedges
Model No. MQ9985 Bag of 4

NOTE: Compatibility with existing Metro polymer mat shelving systems

- MQ9985 wedges are compatible with original MetroMax Q shelves and posts.
- The post centers on MetroMax Q have been changed to allow interchangeability with MetroMax i™ shelves. MetroMax Q shelves manufactured within or after April 2009 are not compatible with Q shelves made prior to April 2009.
- MetroMax Q is not compatible with original MetroMax manufactured prior to April 2009.
- Posts listed in above table (ex. MQ74PE, MX74PE) can be used with original MetroMax Q shelves made prior to April 2009.

Post Clamp

Adds stability by joining posts of two separate units together. With it, each unit is supported by four posts and buttressed by the adjacent unit.

Model No. 9994X

Foot Plate

Use to add stability to the shelving unit or to bolt units to the floor.

Model No. Zinc 9993Z

Model No. Stainless Steel 9993S

Stem Casters

A variety of stem casters are offered for MetroMax i™ mobile applications.

Stem caster models include bumpers.

See Catalog Sheet 11.20 for stem casters.

Load Rating: 3 x Stem Caster Load Rating, maximum — 900 lbs. (363kg) per stem caster cart.

METROMAX Q™ POLYMER AND STEEL SHELVING

Starter and Add-On Units

- 4- and 5-tier models available. Consult the Metro catalog for models.
- Starter units: consist of shelves and (4) posts
- Add-on units: consist of shelves, (2) posts, and “S” Hooks (M9995)

“S” Hook: Used to “add on” one or multiple MetroMax Q™ storage systems while eliminating the cost of two posts per unit. Can be used to join units end-to-end, back-to-back, at right angles, etc. Two “S” hooks are required for each shelf.

Cat. No. M9995

MetroMax Q™ Intermediate

“S” Hook: Use when configuring MetroMax Q Starter and Add-On Units at right angles.

Model No. Q9995Z

	Regular “S” Hook location
	Intermediate bracket location
	Post
	Post not required

END-TO-END

“S” Hooks
M9995 — qty. 2

RIGHT ANGLES

Intermediate “S” Hook Kit
Q9995Z — qty. 1; M9995 — qty. 1

COMBINATION

Intermediate “S” Hook Kits
Q9995Z — qty. 2; M9995 — qty. 2

MetroMax Q™ Carts

- 4- and 5-tier models
- Grid shelf models
- Units consist of shelves, (4) posts, (2) swivel, and (2) swivel brake casters.
- Consult the Metro catalog for models.

1-1/2 – 2 H.P. DISPOSER MODELS

Heavy-duty disposer designed for continuous operation in restaurants, hotels, hospitals and cafeterias. Food waste including steak bones is quickly and efficiently removed with this labor-saving, self-cleaning, environmentally sound disposer.

SPECIFICATIONS

- **Grind Chamber:** Corrosion Resistant Stainless Steel
- **Mounting:** 3/4" (19.1 mm) rubber mounting above grinding chamber isolates sound and eliminates vibration. Mounting is enclosed in chrome plated covers for sanitation and appearance.
- **Motor:** 1-1/2 – 1 HP Induction Motor, 1725 RPM, totally enclosed to provide protection against outside moisture. Controlled power air flow cools motor for efficiency and longer life. Built-in thermal overload protection.
- **Cutting Elements:** Stationary and rotating shredding elements made from cast nickel chrome alloy for long life and corrosion resistance, designed for reverse action grinding.
- **Main Bearings:** Double-tapered Timken roller bearings provide a shock absorbing cushion.
- **Motor Seals:** Triple lip seal protects motor from water damage. Secondary spring-loaded oil seal provides double protection against water and loss of grease.
- **Finish:** All Stainless Steel and Chrome plated. Paint-free for lasting sanitation.
- **Warranty:** 1 year full warranty from date of installation.
- **A Disposer Package Includes:** 1 Mounting/Bowl Assembly, 1 Electrical Control, 1 Syphon Breaker, 1 Solenoid Valve, and 1 Flow Control Valve. The standard Flow Control Valve will be sent with the unit unless the optional valve is specified.

DISPOSER MOUNTING ASSEMBLIES (choose one)

Bowl Mounts

-  Type A Sink Bowl Assembly: Includes bowl, water nozzle(s), bowl cover, splash baffle
-  Type B Sink Bowl Assembly: Includes bowl, water nozzle(s), silver guard, splash baffle
-  Type C Sink Bowl Assembly: Includes bowl, water nozzle(s), splash baffle

Sink Bowl Assembly Size

- 12" (304.8 mm) with one adjustable water nozzle
- 15" (381.0 mm) with one adjustable water nozzle
- 18" (457.2 mm) with two adjustable water nozzles

Collar Mounts

-  #5 Sink Flange Mounting Assemblies for 3-1/2" – 4" (88.9 mm – 101.6 mm) sink opening (support legs are recommended)
-  #6 Collar Adaptor for welding into trough, provides 6-5/8" (168.3 mm) opening, includes splash baffle
-  #7 Collar Adaptor for welding into sink, provides 6-5/8" (168.3 mm) opening, includes splash baffle and stopper

DIMENSIONS

IMPORTANT: Use dimension chart below for adaptor height in place of InSinkEerator bowl sink height when mounting directly to a sink.

Bowl Sinks	Flange O.D. X	Work Table Hole Y	Flange I.D. Z	Height
12" (304.8 mm)	13-1/2" (342.9 mm)	12-1/4" (311.2 mm)	12" (304.8 mm)	6-1/2" (165.1 mm)
15" (381 mm)	16-1/2" (419.1 mm)	15-1/4" (387.4 mm)	15" (381.0 mm)	6-1/2" (165.1 mm)
18" (457.2 mm)	19-1/2" (495.3 mm)	18-1/4" (463.6 mm)	18" (457.2 mm)	6-1/2" (165.1 mm)
Adaptors	X	Y	Z	Height
No. 5	Fits Standard Sink Opening: 3-1/2" – 4" (88.9 mm – 101.6 mm)			2-3/4" (69.9 mm)
No. 6	7-13/16" (198.4 mm)	6-7/8" (174.6 mm)	6-5/8" (168.3 mm)	1-3/16" (30.7 mm)
No. 7	9-1/8" (231.8 mm)	7-7/8" (200.0 mm)	7-5/8" (193.7 mm)	2-1/16" (52.4 mm)

NOTE:

- Adaptors are available upon request for all competitor sink bowls or cones.
- Please have sink bowl/cone type with the necessary dimensions when ordering adaptors.
- Also available as a short body model. Reduces overall height of disposer by 1" (25.4 mm).

RECOMMENDED INSTALLATION

RECOMMENDED WATER USAGE

	Standard	Optional
SS-150	7 GPM (26.5 LPM)	5 GPM (18.9 LPM)
SS-200	7 GPM (26.5 LPM)	5 GPM (18.9 LPM)

FT900 FLIGHT-TYPE DISHWASHER

HOBART

STANDARD FEATURES

- Opti-RinSe™ system
- Water usage 132 gph @ 20 psi
- Microprocessor controls
- Low temperature alert
- Single point vent connection
- 42" access doors on power wash and power rinse chambers, 34" access doors on prewash chamber
- Variable speed conveyor 4-8.5 fpm
- Start and stop switches at both ends
- Doors open indicator
- Load end flush system
- Door interlocks
- 3 H.P. TEFC prewash, power wash and power rinse pump motors
- Easy to remove wash arms
- Easy to remove scrap trays and baskets
- 30½" wide conveyor
- Insulated hinged doors
- Front and rear panels

DIRECTION OF OPERATION

- Right to Left
- Left to Right

VOLTAGE

- 208/60/3
- 240/60/3
- 480/60/3
- Other voltages available. Consult factory.

MODEL

- FT900 – Flight-Type Dishwasher

OPTIONS AT EXTRA COST

- Energy Recovery – **advansys** (will require a back draft preventer)
- Electric Tank Heat
- Steam Tank Heat
- Booster Heater
 - Electric
 - Steam
- Blower Dryer
 - Electric
 - Steam
- 6" higher than standard chamber
- Prewash temperature control
- Multiple conveyor choices
- Circuit breakers
- Insulated counterbalanced sliding doors option
- Optional conveyor speeds
- Other options available, consult factory

ACCESSORIES

- Feet
 - Extended
 - Flanged
- Water hammer arrestor/PRV.

Specifications, Details and Dimensions on Inside and Back.

FT900 FLIGHT-TYPE DISHWASHER

LA Research Report #M660004

FT900 FLIGHT-TYPE DISHWASHER

HOBART

701 S Ridge Avenue, Troy, OH 45374
1-888-4HOBART • www.hobartcorp.com

DESIGN: Fully automatic, flight-type dishwasher machine consisting of a load section with power recirculating prewash, an 8 foot power wash, power rinse and final rinse section. Included with each machine will be flexible plastic strip curtains to control over spray.

CONSTRUCTION: Stainless steel tank and chambers with No. 3 polish on appearance surfaces. Frame, legs and feet to be constructed of stainless steel. Inspection doors to be chamber width.

PUMPS: Recirculating stainless steel pumps with stainless steel impellers. Pump housing has easy to remove coverplate for access to impeller. All pumps are self-draining. 150 gpm prewash; 292 gpm power wash/power rinse.

MOTORS: Totally enclosed fan cooled design, with inherent overload protection. Prewash, power wash and power rinse motors to be 3 H.P. each, conveyor ½ H.P. Available in electrical specifications of 200-240/60/3 and 480/60/3.

CONTROLS: A stainless steel control center with electronic digital controls mounted at eye level. Power “On/Off” and “Start/Stop” switches integrated into keypad. Digital display indicates door(s) open, low temperature alert, tanks/final rinse temperatures, and other pertinent operating data. Additional “Start/Stop” switches are located at each end of machine.

FLIGHT-TYPE CONVEYOR: Stainless steel side links, tie rods and conveyor tracks. Injection molded, resilient Duraflex flight links.

VENT: Single built-in vent duct with dampers mounted in cleanable cross duct.

RECIRCULATING PREWASH SECTION: Prewash compartment is fitted with upper and lower wash arms. Prewash flush down for prewash tank bed. Large removable one piece perforated stainless steel screen sloped downward to deep stainless steel scrap basket.

TANK HEAT: Power wash and power rinse tank water temperatures are thermostatically controlled. Low water protection is provided. Specify either electric or steam heat.

FINAL RINSE: Easily removed final rinse arms.

CONVEYOR DRIVE UNIT: Powered by a ½ H.P. motor. Trip mechanism provided on unload section. Jam protection is provided by load sensing switch at drive platform. Conveyor speed adjustment of 4 fpm to 8.5 fpm is provided in the main control box.

DRAINS: Manual, hand operated, located in each tank.

No other control system allows easier monitoring.

The controls are placed in a convenient panel that lets operators verify proper operation and temperatures at a glance.

Digital display indicates the unit is on, and confirms that the doors are closed. Automatic door interlocks

prevent the pump and conveyor from operating if the doors are open. Easy-to-read digital display indicates accurate temperatures of the 150°F wash, 160°F power rinse, 160°F dual rinse and 180°F final rinse — critical for proper HACCP system record-keeping.

Stainless steel pump is built for long life.

The stainless steel pump housing and impeller offer greater durability and long life. The pump motor is totally enclosed and fan cooled (TEFC) to protect it from water spray during dishroom clean-up. The pump is also externally mounted to the frame for added rigidity and easy access to the clean-out port.

701 S Ridge Avenue, Troy, OH 45374
1-888-4HOBART • www.hobartcorp.com

FT900 FLIGHT-TYPE DISHWASHER

Scrap baskets capture food particles and are easy to clean.

The sloped screens that carry scraps to the scrap baskets are steeper, so less soil gets into the tanks. The basket opening is larger for easy cleaning and basket handles have been designed for easy lift-out access.

The FT900 Series saves water and energy.

The unit is designed to cut water and energy usage, yet provide effective cleaning and sanitizing that meet NSF International requirements.

This is achieved through a carefully balanced ratio of water flow to pressure. At 292 gallons per min-

ute (gpm), the machine offers excellent wetting and flooding over ware. Insulated doors also reduce heat loss. The unit's 2.2 gpm/132 gallons per hour rinse flow rate (the lowest in the industry on a standard machine) saves both water and the energy to heat it.

Wider, variable speed conveyor offers increased throughput.

The conveyor on the FT900 Series is wider so it can handle more ware. Result: more volume and versatility, quicker work. Its speed is servicer adjustable for the type of ware, soiled condition, or work-force requirements. It can be adjusted from 4 to 8.5 feet per minute.

Optional Energy Recovery system.

The optional Energy Recovery system captures escaping heat and steam from the exhaust air and uses a heat exchanger to recycle it into energy. This free energy is used to preheat the incoming water supply before it enters the booster heater. The cold ground temperature water passes through a heat exchanger positioned directly in line with the machine's exhaust system to capture the energy from the exhaust air to elevate the temperature of the water to 128° before it enters the booster heater.

Flush arm keeps load end clean.

The load end also has a readily removable flush arm to rinse food scraps into the prewash area scrap basket.

Self-draining pumps help keep water clean.

Pumps are self-draining when the machine is shut down, so there is no residual water left in the pumps.

Installation is quick and easy with modular design, minimal wiring connections, and single point vent.

Modular design means the FT900 installs quickly, and reliably. Sections fit through 42" doors. The control panel is already in place, premounted to the power wash/power rinse/final rinse section.

Wiring connections are minimal, and there is only a single vent connection, saving time and expense.

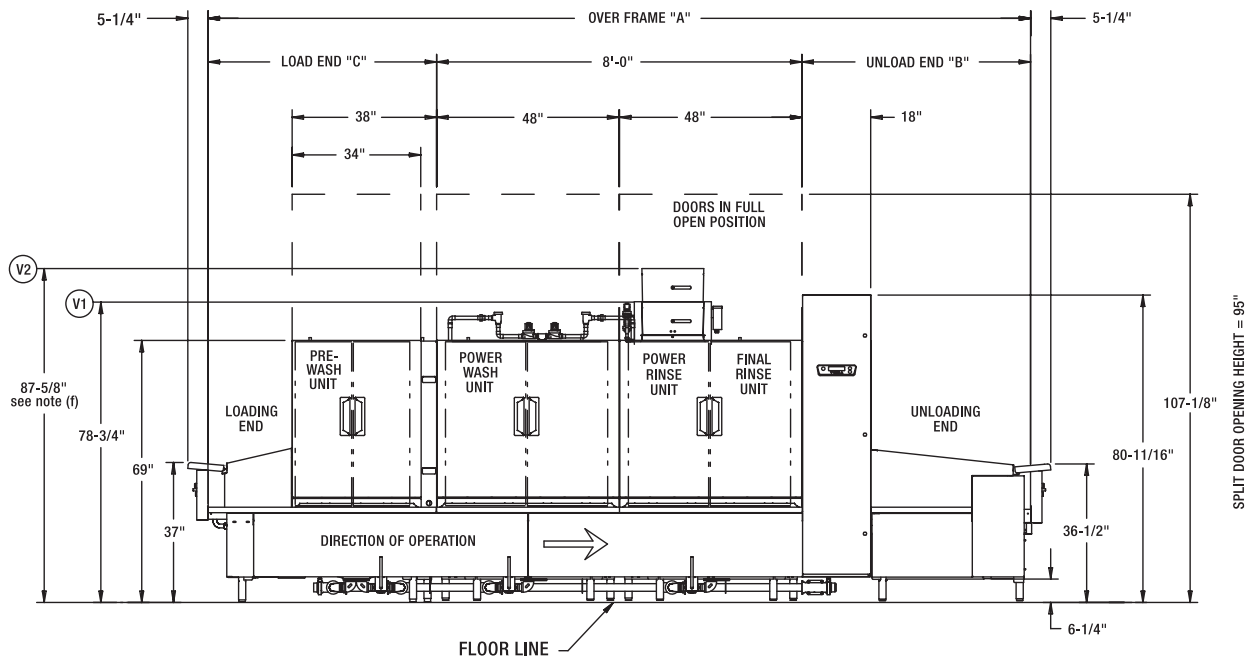

The control box uses a "single plane" circuitry design for easy accessibility during installation and service. The FT900 is ready to run quickly.

FT900 ELECTRIC L-R

FT900 ELECTRIC L-R

ELECTRICAL CONNECTIONS COMMON ON ALL MODELS:

- E1 ELECTRIC CONNECTION, DETERGENT AND RINSE FEEDERS (MACHINE SERVICE VOLTAGE), 1/2" CONDUIT, 76-7/8" AFF
- E2 ELECTRIC CONNECTION, VENT FAN CONTROL (SWITCH CONTACTS) 1/2" CONDUIT, 79-3/8" AFF

ELECTRICAL CONNECTIONS W/O CIRCUIT BREAKERS:

- E3 ELECTRIC CONNECTION, MOTORS & CONTROLS, 1" CONDUIT, 78-1/8" AFF
- E4 ELECTRIC TANK HEAT CONNECTION, 26 KW, 1" CONDUIT, 78-1/8" AFF
- E5 ELECTRIC TANK HEAT CONNECTION, 26 KW, 1" CONDUIT, 78-1/8" AFF
- E6 ELECTRIC CONNECTION, (OPTIONAL) ELECTRIC BOOSTER, 1-1/2" CONDUIT, 18-1/8" AFF

ELECTRICAL CONNECTIONS WITH CIRCUIT BREAKERS:

- E7 ELECTRIC CONNECTION, MOTORS, CONTROLS AND TANK HEAT (WHEN CIRCUIT BREAKER OPTION IS SPECIFIED), 2" CONDUIT, 78-1/8" AFF
- E8 ELECTRIC CONNECTION, (OPTIONAL) ELECTRIC BOOSTER, 1-1/2" CONDUIT, 18-1/8" AFF

PLUMBING CONNECTIONS:

- P1 FILL CONNECTION, (WHEN NO BOOSTER IS SPECIFIED), AUTOMATIC FILL, 140° F WATER, 1" FPT, 7-5/16" AFF
- P2 FINAL RINSE CONNECTION, (WHEN NOT SUPPLIED WITH BOOSTER WATER HEATER) 3/4" FPT, 180° F WATER MINIMUM, 11-3/16" AFF see notes (b) and (d).
- P3 COMMON DRAIN CONNECTION, (WHEN DRAIN TO LOAD END IS SPECIFIED), 2" FPT, 4-1/2" AFF
- P4 COMMON DRAIN CONNECTION, (WHEN DRAIN TO UNLOAD END OPTION IS SPECIFIED), 2" FPT, 4-1/2" AFF
- P5 COLD WATER CONNECTION, (WHEN PREWASH TEMPERATURE CONTROL OPTION IS SPECIFIED WITHOUT ENERGY RECOVERY), 1" FPT, 14-1/2" AFF
- P6 COMMON HOT WATER CONNECTION, (AUTOMATIC FILL) (WHEN ELECTRIC BOOSTER OR ENERGY RECOVERY OPTION IS SPECIFIED), 1" FPT, 140° F WATER MINIMUM, 7-5/16" AFF see notes (b) and (d).
- P7 COLD WATER CONNECTION, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED WITH OR WITHOUT THE PREWASH TEMPERATURE CONTROL OPTION), 55° F WATER MINIMUM, 1" FPT, 10" AFF see notes (c) and (d)

VENTILATION CONNECTIONS:

- V1 CUSTOMER'S VENT CONNECTION, (WHEN NOT SUPPLIED WITH ENERGY RECOVERY) MUST FIT INSIDE 16" DIAMETER VENT STACK, 750 CFM (AT STANDARD AIR CONDITIONS) EXHAUST REQUIRED, 78-3/4" AFF see note (e).
- V2 CUSTOMER'S VENT CONNECTION, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED) MUST FIT INSIDE 16" DIAMETER VENT STACK, 750 CFM (AT STANDARD AIR CONDITIONS) EXHAUST REQUIRED, 87-5/8" AFF see notes (e) and (f).

GENERAL NOTES:

- (a) THE CONTROL BOX IS ATTACHED TO THE CENTER SECTION, AND THE CONTROL BOX IS ROTATED 90 DEGREES ALLOWING THE CENTER SECTION TO FIT THROUGH A 42" WIDE, 7' DOOR OPENING.
WITH BACK PANEL AND END CAPS REMOVED, CONTROL PANEL HINGED BACK AND ALL REAR PIPING REMOVED, OVERALL WIDTH OF MACHINE IS 39-1/8".
AFF = ABOVE FINISHED FLOOR
ALL DIMENSIONS TAKE FROM THE FLOOR LINE MAY INCREASE 2-1/2" OR DECREASE 1/2" WITH LEG ADJUSTMENT.
FOR CONVENIENCE WHEN CLEANING, CUSTOMER SHOULD INSTALL WATER TAP NEAR MACHINE WITH 30 FT. OF HEAVY DUTY HOSE WITH SQUEEZE VALVE.
THIS DRAWING IS SUPPLIED AS A REFERENCE FOR CONNECTION INFORMATION ONLY. IT WILL NOT BE UTILIZED FOR MANUFACTURING OF UNIT.

ELECTRICAL WARNING:

ELECTRICAL AND GROUNDING CONNECTIONS MUST COMPLY WITH THE APPLICABLE PORTIONS OF THE NATIONAL ELECTRICAL CODE AND/OR OTHER ELECTRICAL CODES.
SERVICE WIRE TEMPERATURE RATING: 90°C.

PLUMBING NOTES:

- PLUMBING CONNECTIONS MUST COMPLY WITH APPLICABLE SANITARY, SAFETY AND PLUMBING CODES.
RECOMMENDED WATER HARDNESS TO BE 3 GRAINS OR LESS PER GALLON FOR BEST RESULTS.
- (b) RECOMMENDED BUILDING FLOWING HOT WATER PRESSURE TO THE DISHWASHER IS 30-35 PSI.
- (c) RECOMMENDED BUILDING FLOWING COLD WATER PRESSURE TO THE DISHWASHER IS 45-50 PSI WHEN THE ENERGY RECOVERY OPTION IS SPECIFIED. IF COLD WATER IS LESS THAN 55°F CONTACT SALES ENGINEERING.
- (d) WATER HAMMER ARRESTOR (MEETING ASSE-1010 STANDARD OR EQUIVALENT) TO BE SUPPLIED (BY OTHERS) IN FINAL RINSE WATER SUPPLY LINE AT SERVICE CONNECTION.

VENTILATION NOTES:

- (e) THIS DIMENSION IS SUBJECT TO NORMAL SHEET METAL TOLERANCES
- (f) THE VENT STACK CAN BE TEMPORARILY REMOVED FROM THE ENERGY RECOVERY UNIT TO YIELD 79" CLEARANCE FOR DOORWAYS.

FT900 ELECTRIC R-L

ELECTRICAL CONNECTIONS COMMON ON ALL MODELS:

- E1 ELECTRIC CONNECTION, DETERGENT AND RINSE FEEDERS (MACHINE SERVICE VOLTAGE), 1/2" CONDUIT, 76-7/8" AFF
- E2 ELECTRIC CONNECTION, VENT FAN CONTROL (SWITCH CONTACTS) 1/2" CONDUIT, 79-3/8" AFF

ELECTRICAL CONNECTIONS W/O CIRCUIT BREAKERS:

- E3 ELECTRIC CONNECTION, MOTORS & CONTROLS, 1" CONDUIT, 78-1/8" AFF
- E4 ELECTRIC TANK HEAT CONNECTION, 26 KW, 1" CONDUIT, 78-1/8" AFF
- E5 ELECTRIC TANK HEAT CONNECTION, 26 KW, 1" CONDUIT, 78-1/8" AFF
- E6 ELECTRIC CONNECTION, (OPTIONAL) ELECTRIC BOOSTER, 1-1/2" CONDUIT, 18-1/8" AFF

ELECTRICAL CONNECTIONS WITH CIRCUIT BREAKERS:

- E7 ELECTRIC CONNECTION, MOTORS, CONTROLS AND TANK HEAT (WHEN CIRCUIT BREAKER OPTION IS SPECIFIED), 2" CONDUIT, 78-1/8" AFF
- E8 ELECTRIC CONNECTION, (OPTIONAL) ELECTRIC BOOSTER, 1-1/2" CONDUIT, 18-1/8" AFF

PLUMBING CONNECTIONS:

- P1 FILL CONNECTION, (WHEN NO BOOSTER IS SPECIFIED), AUTOMATIC FILL, 140° F WATER, 1" FPT, 7-5/16" AFF
- P2 FINAL RINSE CONNECTION, (WHEN NOT SUPPLIED WITH BOOSTER WATER HEATER) 3/4" FPT, 180° F WATER MINIMUM, 11-9/16" AFF see notes (b) and (d).
- P3 COMMON DRAIN CONNECTION, (WHEN DRAIN TO LOAD END IS SPECIFIED), 2" FPT, 4-1/2" AFF
- P4 COMMON DRAIN CONNECTION, (WHEN DRAIN TO UNLOAD END OPTION IS SPECIFIED), 2" FPT, 4-1/2" AFF
- P5 COLD WATER CONNECTION, (WHEN PREWASH TEMPERATURE CONTROL OPTION IS SPECIFIED WITHOUT ENERGY RECOVERY), 1" FPT, 14-1/2" AFF
- P6 COMMON HOT WATER CONNECTION, (AUTOMATIC FILL) (WHEN ELECTRIC BOOSTER OR ENERGY RECOVERY OPTION IS SPECIFIED), 1" FPT, 140° F WATER MINIMUM, 7-5/16" AFF see notes (b) and (d).
- P7 COLD WATER CONNECTION, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED WITH OR WITHOUT THE PREWASH TEMPERATURE CONTROL OPTION), 55° F WATER MINIMUM, 1" FPT, 10" AFF see notes (c) and (d)

VENTILATION CONNECTIONS:

- V1 CUSTOMER'S VENT CONNECTION, (WHEN NOT SUPPLIED WITH ENERGY RECOVERY) MUST FIT INSIDE 16" DIAMETER VENT STACK, 750 CFM (AT STANDARD AIR CONDITIONS) EXHAUST REQUIRED, 78-3/4" AFF see note (e).
- V2 CUSTOMER'S VENT CONNECTION, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED) MUST FIT INSIDE 16" DIAMETER VENT STACK, 750 CFM (AT STANDARD AIR CONDITIONS) EXHAUST REQUIRED, 87-5/8" AFF see notes (e) and (f).

GENERAL NOTES:

- (a) THE CONTROL BOX IS ATTACHED TO THE CENTER SECTION, AND THE CONTROL BOX IS ROTATED 90 DEGREES ALLOWING THE CENTER SECTION TO FIT THROUGH A 42" WIDE, 7' DOOR OPENING.
WITH BACK PANEL AND END CAPS REMOVED, CONTROL PANEL HINGED BACK AND ALL REAR PIPING REMOVED, OVERALL WIDTH OF MACHINE IS 39-1/8".
AFF = ABOVE FINISHED FLOOR
ALL DIMENSIONS TAKE FROM THE FLOOR LINE MAY INCREASE 2-1/2" OR DECREASE 1/2" WITH LEG ADJUSTMENT.
FOR CONVENIENCE WHEN CLEANING, CUSTOMER SHOULD INSTALL WATER TAP NEAR MACHINE WITH 30 FT. OF HEAVY DUTY HOSE WITH SQUEEZE VALVE.
THIS DRAWING IS SUPPLIED AS A REFERENCE FOR CONNECTION INFORMATION ONLY. IT WILL NOT BE UTILIZED FOR MANUFACTURING OF UNIT.

ELECTRICAL WARNING:

ELECTRICAL AND GROUNDING CONNECTIONS MUST COMPLY WITH THE APPLICABLE PORTIONS OF THE NATIONAL ELECTRICAL CODE AND/OR OTHER ELECTRICAL CODES.
SERVICE WIRE TEMPERATURE RATING: 90°C.

PLUMBING NOTES:

- PLUMBING CONNECTIONS MUST COMPLY WITH APPLICABLE SANITARY, SAFETY AND PLUMBING CODES.
RECOMMENDED WATER HARDNESS TO BE 3 GRAINS OR LESS PER GALLON FOR BEST RESULTS.
- (b) RECOMMENDED BUILDING FLOWING HOT WATER PRESSURE TO THE DISHWASHER IS 30-35 PSI.
- (c) RECOMMENDED BUILDING FLOWING COLD WATER PRESSURE TO THE DISHWASHER IS 45-50 PSI WHEN THE ENERGY RECOVERY OPTION IS SPECIFIED. IF COLD WATER IS LESS THAN 55°F CONTACT SALES ENGINEERING.
- (d) WATER HAMMER ARRESTOR (MEETING ASSE-1010 STANDARD OR EQUIVALENT) TO BE SUPPLIED (BY OTHERS) IN FINAL RINSE WATER SUPPLY LINE AT SERVICE CONNECTION.

VENTILATION NOTES:

- (e) THIS DIMENSION IS SUBJECT TO NORMAL SHEET METAL TOLERANCES
- (f) THE VENT STACK CAN BE TEMPORARILY REMOVED FROM THE ENERGY RECOVERY UNIT TO YIELD 79" CLEARANCE FOR DOORWAYS.

ELECTRICAL CONNECTIONS COMMON ON ALL MODELS:

- E1 ELECTRIC CONNECTION, DETERGENT AND RINSE FEEDERS (MACHINE SERVICE VOLTAGE), 1/2" CONDUIT, 76-7/8" AFF
- E2 ELECTRIC CONNECTION, VENT FAN CONTROL, (SWITCH CONTACTS) 1/2" CONDUIT, 79-3/8" AFF
- E3 ELECTRIC CONNECTION, MOTORS AND CONTROLS, 1" CONDUIT, 78-1/8" AFF

PLUMBING CONNECTIONS:

- P1 FILL CONNECTION, (WHEN NO BOOSTER IS SPECIFIED), AUTOMATIC FILL, 140°F WATER, 1" FPT, 7-5/16" AFF
- P2 FINAL RINSE CONNECTION, (WHEN NOT SUPPLIED WITH BOOSTER WATER HEATER) 3/4" FPT, 180°F WATER MINIMUM, 11-9/16" AFF see notes (b) and (d).
- P3 COMMON DRAIN CONNECTION, (WHEN DRAIN TO LOAD END IS SPECIFIED), 2" FPT, 4-1/2" AFF
- P4 STEAM CONNECTION, REGULATED TANK HEAT (WHEN NO BOOSTER IS SPECIFIED), 50 P.S.I. MAX., 15-25 FLOWING PRESSURE, 1" FPT, 4-3/4" AFF see note (e).
- P5 CONDENSATE RETURN, GRAVITY CONNECTION (WHEN OPTIONAL STEAM COILS ARE SPECIFIED), BUCKET TYPE TRAPS FURNISHED, 2 CONNECTIONS, 3/4" FPT, 4-3/4" AFF
- P6 COMMON DRAIN CONNECTION, (WHEN DRAIN TO UNLOAD END OPTION IS SPECIFIED), 2" FPT, 4-1/2" AFF
- P7 COLD WATER CONNECTION, (WHEN PREWASH TEMPERATURE CONTROL OPTION IS SPECIFIED WITHOUT ENERGY RECOVERY), 1" FPT, 14-1/2" AFF
- P8 COMMON HOT WATER CONNECTION, (AUTOMATIC FILL) (WHEN STEAM BOOSTER OR ENERGY RECOVERY OPTION IS SPECIFIED), 1" FPT, 140°F WATER MINIMUM, 7-5/16" AFF see notes (b) and (d).
- P9 COMMON STEAM CONNECTION, (WHEN TANK HEAT AND OPTIONAL STEAM BOOSTER ARE SPECIFIED), 1-1/2" FPT, 8-1/8" AFF (50 P.S.I. MAX., 15-25 FLOWING PRESSURE) see note (e).
- P10 CONDENSATE RETURN, (GRAVITY CONNECTION) (WHEN STEAM BOOSTER OPTION IS SPECIFIED), 3/4" FPT, BUCKET TYPE TRAP FURNISHED, 3-3/4" AFF
- P11 STEAM RELIEF VALVE, (WHEN STEAM BOOSTER OPTION IS SPECIFIED), 1" FPT, MUST BE PIPED TO OPEN DRAIN RECEIVER IN THE FLOOR, 13-1/2" AFF
- P12 HOT WATER RELIEF VALVE, (WHEN STEAM BOOSTER OPTION IS SPECIFIED), 3/4" FPT, MUST BE PIPED TO OPEN DRAIN RECEIVER IN THE FLOOR, 15-1/2" AFF
- P13 COMMON STEAM CONNECTION, (WHEN DOUBLE STEAM INJECTOR TANK HEAT OPTION IS SPECIFIED WITHOUT A STEAM BOOSTER) 3" FPT 6-3/4" AFF, (50 PSI MAX., 15-25 FLOWING PRESSURE) see note (e).
- P14 COMMON STEAM CONNECTION, (WHEN BOTH THE DOUBLE STEAM INJECTOR TANK HEAT AND STEAM BOOSTER OPTIONS ARE SPECIFIED), 3" FPT, 6-3/4" AFF, (50 PSI MAX., 15-25 FLOWING PRESSURE) see note (e).
- P15 COLD WATER CONNECTION, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED WITH OR WITHOUT THE PREWASH TEMPERATURE CONTROL OPTION), 55°F WATER MINIMUM, 1" FPT, 10" AFF see notes (c) and (d).
- P16 HOT WATER RELIEF VALVE, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED), 1/2" FPT, MUST BE PIPED TO OPEN DRAIN RECEIVER IN THE FLOOR, 15-1/2" AFF

VENTILATION CONNECTIONS:

- V1 CUSTOMER'S VENT CONNECTION, (WHEN NOT SUPPLIED WITH ENERGY RECOVERY) MUST FIT INSIDE 16" DIAMETER VENT STACK, 750 CFM (AT STANDARD AIR CONDITIONS) EXHAUST REQUIRED, 78-3/4" AFF see note (f)
- V2 CUSTOMER'S VENT CONNECTION, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED) MUST FIT INSIDE 16" DIAMETER VENT STACK, 750 CFM (AT STANDARD AIR CONDITIONS) EXHAUST REQUIRED, 87-5/8" AFF see notes (f) and (g)

GENERAL NOTES:

- (a) THE CONTROL BOX IS ATTACHED TO THE CENTER SECTION, AND THE CONTROL BOX IS ROTATED 90 DEGREES ALLOWING THE CENTER SECTION TO FIT THROUGH A 42" WIDE, 7" DOOR OPENING.
WITH BACK PANEL AND END CAPS REMOVED, CONTROL PANEL HINGED BACK AND ALL REAR PIPING REMOVED, OVERALL WIDTH OF MACHINE IS 39-1/8".

- P13 COMMON STEAM CONNECTION, (WHEN DOUBLE STEAM INJECTOR TANK HEAT OPTION IS SPECIFIED WITHOUT A STEAM BOOSTER) 3" FPT 6-3/4" AFF, (50 PSI MAX., 15-25 FLOWING PRESSURE) see note (e).
- P14 COMMON STEAM CONNECTION, (WHEN BOTH THE DOUBLE STEAM INJECTOR TANK HEAT AND STEAM BOOSTER OPTIONS ARE SPECIFIED), 3" FPT, 6-3/4" AFF, (50 PSI MAX., 15-25 FLOWING PRESSURE) see note (e).
- P15 COLD WATER CONNECTION, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED WITH OR WITHOUT THE PREWASH TEMPERATURE CONTROL OPTION), 55°F WATER MINIMUM, 1" FPT, 10" AFF see notes (c) and (d).
- P16 HOT WATER RELIEF VALVE, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED), 1/2" FPT, MUST BE PIPED TO OPEN DRAIN RECEIVER IN THE FLOOR, 15-1/2" AFF

VENTILATION CONNECTIONS:

- V1 CUSTOMER'S VENT CONNECTION, (WHEN NOT SUPPLIED WITH ENERGY RECOVERY) MUST FIT INSIDE 16" DIAMETER VENT STACK, 750 CFM (AT STANDARD AIR CONDITIONS) EXHAUST REQUIRED, 78-3/4" AFF see note (f)
- V2 CUSTOMER'S VENT CONNECTION, (WHEN ENERGY RECOVERY OPTION IS SPECIFIED) MUST FIT INSIDE 16" DIAMETER VENT STACK, 750 CFM (AT STANDARD AIR CONDITIONS) EXHAUST REQUIRED, 87-5/8" AFF see notes (f) and (g)

GENERAL NOTES:

- (a) THE CONTROL BOX IS ATTACHED TO THE CENTER SECTION, AND THE CONTROL BOX IS ROTATED 90 DEGREES ALLOWING THE CENTER SECTION TO FIT THROUGH A 42" WIDE, 7" DOOR OPENING.
WITH BACK PANEL AND END CAPS REMOVED, CONTROL PANEL HINGED BACK AND ALL REAR PIPING REMOVED, OVERALL WIDTH OF MACHINE IS 39-1/8".
AFF = ABOVE FINISHED FLOOR
ALL DIMENSIONS TAKE FROM THE FLOOR LINE MAY INCREASE 2-1/2" OR DECREASE 1/2" WITH LEG ADJUSTMENT.
FOR CONVENIENCE WHEN CLEANING, CUSTOMER SHOULD INSTALL WATER TAP NEAR MACHINE WITH 30 FT. OF HEAVY DUTY HOSE WITH SQUEEZE VALVE.
THIS DRAWING IS SUPPLIED AS A REFERENCE FOR CONNECTION INFORMATION ONLY. IT WILL NOT BE UTILIZED FOR MANUFACTURING OF UNIT.

ELECTRICAL WARNING:

ELECTRICAL AND GROUNDING CONNECTIONS MUST COMPLY WITH THE APPLICABLE PORTIONS OF THE NATIONAL ELECTRICAL CODE AND/OR OTHER ELECTRICAL CODES.

SERVICE WIRE TEMPERATURE RATING: 90°C.

PLUMBING NOTES:

PLUMBING CONNECTIONS MUST COMPLY WITH APPLICABLE SANITARY, SAFETY AND PLUMBING CODES. RECOMMENDED WATER HARDNESS TO BE 3 GRAINS OR LESS PER GALLON FOR BEST RESULTS.

- (b) RECOMMENDED BUILDING FLOWING HOT WATER PRESSURE TO THE DISHWASHER IS 30-35 PSI.
- (c) RECOMMENDED BUILDING FLOWING COLD WATER PRESSURE TO THE DISHWASHER IS 45-50 PSI WHEN THE ENERGY RECOVERY OPTION IS SPECIFIED. IF COLD WATER IS LESS THAN 55°F CONTACT SALES ENGINEERING.
- (d) WATER HAMMER ARRESTOR (MEETING ASSE-1010 STANDARD OR EQUIVALENT) TO BE SUPPLIED (BY OTHERS) IN FINAL RINSE WATER SUPPLY LINE AT SERVICE CONNECTION.
- (e) IF STEAM PRESSURE IS UNDER 15 PSI AT THE DISHWASHER, CONTACT SALES ENGINEERING.

VENTILATION NOTES:

- (f) THIS DIMENSION IS SUBJECT TO NORMAL SHEET METAL TOLERANCES
- (g) THE VENT STACK CAN BE TEMPORARILY REMOVED FROM THE ENERGY RECOVERY UNIT TO YIELD 79" CLEARANCE FOR DOORWAYS.

FT900 FLIGHT-TYPE DISHWASHER

701 S Ridge Avenue, Troy, OH 45374
1-888-4HOBART • www.hobartcorp.com

FT (flight type) Models—many additional variations of these model specifications are available. Engineering data furnished on request.

Numbers in parentheses, after model number from left to right, represent length in feet of the following respectively; Loading section, Washing and Power Rinsing sections, Unloading section.

Flight-type dishwasher with BLOWER-DRYER OPTION has the same specifications as the Basic FT900 Series EXCEPT for one additional Blower Motor (2 H.P. — 208-240/60/3 and 480/60/3) and is available on any model having either a 9 or 11 foot Unloading section.

Entire FT900 Series is listed by UL and NSF and meets requirements of ASSE Standard No. 1004.

FT900 Series (5, 7 Load / 8 Center / 5, 7, 9, 11 Unload)*	
Machine Ratings (Mechanical) Conveyor Speed — Feet per minute	4 - 8.5
Dishes per Hour	14,316
Floor Space - Feet — Machine length plus 10½" total for load and unload platform overhangs	*Example: FT918 = 5' Load + 8' Center + 5' Unload + 10½" Platform Overhangs = 18'10½" long
Overall Dimensions (H x W) — inches (standard height)	80 ¹ / ₁₆ (C) x 47 (B)
Motor — Horsepower	Pre-Wash - 3; Wash - 3; Rinse - 3; Conveyor - ½
Tank Capacity — Gallons	Pre-Wash - 40; Wash - 40; Rinse - 40
Pump Capacity Gallons per minute—Weir Test	Pre-Wash - 150; Wash - 292; Rinse - 292
Final Rinse — Minutes of operation during one hour of continuous operation	60 at continuous loading condition
Rate of Final Rinse — Gallons per minute at 20 PSI flow pressure	2.2
Final Rinse Consumption — Gallons per hour at 20 PSI flow pressure	132
Exhaust Requirements — Cubic feet per minute without Blower Dryer	750 (at standard air conditions)
Electric Heat Requirements — Tank Heat - Kilowatt (Regulated) Optional Electric Booster - Kilowatt	Disconnect switches are recommended for each power circuit connected to dishwasher. These disconnect switches are NOT furnished by Hobart and should be installed by the electrical contractor at the time of installation. Circuit breakers optional at extra cost. Total tank heat - 52KW (Wash and Rinse) 30KW - 105°F incoming water raised to 190°F (85°F rise) (180°F minimum)
Steam Heat Requirements — Steam Consumption Tank Heat - Pounds per hour - maximum (Regulated) - based on 15 to 52 PSI steam at the machine and on the customer supplying final rinse water at minimum (A) (20 PSIG) Optional Steam Booster - Pounds per hour - maximum - based on 20 PSI steam at 20 PSI water flowing - 120°F incoming water raised to 190°F (70°F rise) (180°F minimum)	24 kw - 140° Incoming Water Approximately 30 lbs. per hour = 1 boiler H.P. (BHP) 175 lbs./150°F Wash minimum/160°F Rinse minimum 99 lbs.
Peak Rate of Drain Flow — Gallons per minute Initial rate with full tanks	38
Shipping Weight Crated	Varies by individual model - consult your Hobart representative

(A) If only 10-12 PSIG Steam Pressure available at machine - specify Low Pressure Steam Option.

(B) With all rear panels and plumbing removed, machine width is 39¹/₈".

(C) Highest item is control box - 80¹/₁₆". Can be adjusted lower 2" for door clearance.

NOTE: Refer to specific specification sheets for short machines (FT900S) machines with Blower-Dryers.

As continued product improvement is a policy of Hobart, specifications are subject to change without notice.

Specification Sheet

Short Form Specifications

Eagle Hand Sink, model HSA-10. Constructed of type 304 stainless steel, all-welded with deep-drawn positive drain sink bowl, inverted "V" edge to prevent spillage and basket drain. Unit less faucet.

Eagle Hand Sink, model HSA-10-F. Features the same as sink #HSA-10, plus splash mounted gooseneck faucet.

Eagle Hand Sink, model HSA-10-FA. Features the same as sink #HSA-10, plus p-trap, tailpiece, and splash mounted gooseneck faucet.

Eagle Hand Sink, model HSA-10-FAW. Features the same as sink #HSA-10, plus p-trap, tailpiece, and splash mounted gooseneck faucet with wrist handles.

Eagle Hand Sink, model HSA-10-FL. Constructed of type 304 stainless steel, all-welded with deep-drawn positive drain sink bowl, inverted "V" edge to prevent spillage, polymer lever drain, and splash mounted gooseneck faucet.

Eagle Hand Sink, model HSA-10-FO. Features the same as sink #HSA-10-FL, plus polymer lever drain includes overflow.

#HSA-10-F

- HSA-10-FAW
- HSA-10-FA
- HSA-10-FL
- HSA-10-FO

Design & Construction Features

- Heavy gauge type 304 stainless steel all-welded construction.
- Inverted "V" edge rim retards spillage.
- Unique deep-drawn positive-drain bowl assures complete drainage to meet the most stringent health code requirements.
- Water inlet: 1/2" (13mm) NPS.
- Drain outlet: 1 1/2" (38mm) NPS.
- Six models to choose from.

Options / Accessories

- P-trap
- Tail piece
- End splashes
- Front skirt
- Side mount wall bracket
- MICROGARD®* antimicrobial protection

* For hand sinks #HSA-10, HSA-10-F, HSA-10-FA, and HSA-10-FAW

UTENSIL/PAN WASHER****HOBART****STANDARD FEATURES**

- 16 gauge stainless steel construction
- Solid state heat controls
- Front loading, split-door configuration
- Flat-bottomed, stainless steel frame rack, with one flat grid rack and two tray support racks
- Chamber accepts 16 full-sized sheet pans, or 140-quart mixing bowl
- Two upper and two lower revolving, debossed non-clogging wash arms
- Two upper and lower revolving rinse arms
- Heavy-duty door and door hinges
- Large, removable stainless steel scrap screen and scrap bucket
- Choice of 10 KW electric, steam injector or steam coil gas tank heat
- Adjustable wash cycle timer
- Stainless steel front panel
- Integrated detergent connections
- Top-mounted dial thermometers
- Door actuated drain closer
- Heavy-duty 5 H.P. motor
- Door interlock switch
- Corrosion-resistant impeller
- Timed fill
- Positive low water protection
- Pre-rinse spray hose (electric booster heater models only)

VOLTAGE

- 208/60/3
- 240/60/3
- 480/60/3

**MODEL**

- UW50

OPTIONS AT EXTRA COST

- 10 KW electric tank heat
- Natural or LP gas tank heat
- 14 KW electric booster heater
- Vent fan control
- Steam injector or steam coil tank heat

ACCESSORIES

- Drain water tempering kit
- Rack insert for 30" trays
- Pre-rinse spray hose assembly (field installed or gas booster machines only)
- Operator training video
- 20" x 20" peg or combination racks

DETAILS & DIMENSIONS – ELECTRIC

PLUMBING NOTES:

WATER HAMMER ARRESTOR (MEETING ASSE-1010 STANDARD OR EQUIVALENT) TO BE SUPPLIED (BY OTHERS) IN COMMON WATER SUPPLY LINE AT SERVICE CONNECTION.
RECOMMENDED WATER HARDNESS TO BE 4-6 GRAINS FOR BEST RESULTS.
RECOMMENDED BUILDING FLOWING WATER PRESSURE TO THE DISHWASHER IS 20-25 PSI. IF PRESSURES HIGHER THAN 25 PSI ARE PRESENT, A PRESSURE REGULATING VALVE MUST BE SUPPLIED (BY OTHERS) IN THE WATER LINE TO THE DISHWASHER.
PRESSURE REGULATOR FURNISHED WHEN ELECTRIC BOOSTER IS ORDERED.
FOR CONVENIENCE WHEN CLEANING, WATER TAP SHOULD BE INSTALLED NEAR MACHINE WITH HEAVY DUTY HOSE AND SQUEEZE VALVE.

MISCELLANEOUS NOTES:

ALL DIMENSIONS TAKEN FROM FLOOR LINE MAY BE INCREASED BY UP TO 1-1/8" WITH LEG ADJUSTMENT.
NET WEIGHT OF MACHINE: 640 LBS. W/O BOOSTER
DOMESTIC SHIPPING WEIGHT: 782 LBS. W/O BOOSTER
NET WEIGHT OF MACHINE: 704 LBS. W/ BOOSTER
DOMESTIC SHIPPING WEIGHT: 846 LBS. W/ BOOSTER
SHIPPING DIMENSIONS:
60" X 38" X 83" HIGH.
SIZE OF RACKS:
40-7/8" X 22-7/8" X 4-1/8"
DRAIN LEVER LOCATED INSIDE TANK.

CONNECTION INFORMATION (*AFF - ABOVE FINISHED FLOOR)

LEGEND

UW50 UTENSIL/PAN WASHER

701 S Ridge Avenue, Troy, OH 45374
1-888-4HOBART • www.hobartcorp.com

SPECIFICATIONS

DESIGN: Heavy-duty, fully automatic, front-loading utensil/pan washer with large split door system. Upper door section slides upward as the lower door section is pulled down. Stainless steel pull-out rack allows easy loading for large utensils and pans. Three variable wash cycles ensure thorough cleaning and sanitizing.

CONSTRUCTION: Tank and hood, 16 gauge stainless steel; 14 gauge frame, legs and adjustable feet. Front enclosure panel standard.

PUMP: Cast iron pump integral with motor, Ni-Resist impeller, horizontally mounted. Pump capacity 343 gpm.

MOTOR: 5 H.P., available in 208/60/3, 240/60/3, or 480/60/3 configurations. Factory sealed lubrication, drip proof with sealed ball bearings. Thermal overload protection.

RACKS PER HOUR:

Wash Cycle	Racks/Hr.
2 minute	18
4 minute	12
6 minute	9

WASH CYCLE: Complete automatic operation. Cycle may be interrupted any time by opening door.

Upper and lower revolving wash arms, with computer designed, debossed, anti-clog wash nozzles, direct high pressure wash flow to all soiled surfaces.

Large, sloping, perforated, removable stainless steel scrap screens direct food soils to a deep perforated stainless steel scrap basket.

Scrap basket and strainer easily removed.

RINSE CYCLE: 180°F final sanitizing rinse through two upper and two lower revolving rinse arms with stainless steel rinse jets. Rinse arms removable without tools.

RACKING: Standard rack assortment consists of one flat-bottomed frame rack, one flat grid insert rack, and two tray support insert racks. External rack dimensions are 40 $\frac{7}{8}$ " wide, 22 $\frac{7}{8}$ " deep, and 4 $\frac{1}{8}$ " high.

Standard flat-bottomed frame rack also accepts (2) 20" x 20" combination or peg racks per cycle.

SPECIFICATIONS: Listed by Underwriters Laboratories Inc., NSF International and CSA Certified.

As continued product improvement is a policy of Hobart Corporation, specifications are subject to change without notice.

TRAY AND RACK DISPENSER

- STAINLESS STEEL
- CANTILEVER DESIGN
- SELF LEVELING, FIELD ADJUSTABLE

- MOBILE
- SINGLE OR DOUBLE

Model Series: TRC-M-*

APPLICATION:

- Cafeterias
- Serving lines
- Tray make-up systems
- Back up storage
- Modular buffet systems

CAPACITY:

- Trays: App 100 – 150 trays
- Racks: 5 to 6 racks per stack
- Baskets: 5 to 6 baskets per stack
- Above capacities doubled for double units

DISPENSES:

- Trays
- Chinaware in racks
- Chinaware in baskets

SPECIFICATIONS:

- Stainless steel; Type 304
- “Heliarc” and spot welded construction
- All seams fully welded & polished
- Channel reinforced extended base for rigidity and stability
- Dispensing system in a steel upright uni-frame enclosure
- Cantilever dispensing system
- Dispensers are equipped with non-rusting springs that are heat treated for strength & durability
- With easy off back panel for spring removal
- Wrap-around bumper
- Push handle on rear as standard
- 4 > 5” swivel, non-marking casters with 4 side brakes

OPTIONAL FEATURES [1]:

- NP - Stainless steel nameplate
- PP - Push posts on top of unit
(Handle is removed when adding push posts)
- Sealed casters for cart wash
- STD-F - Flat style overshelf
- 8CD - Cylinder style overshelf
- OS4 - 4 pan overshelf
- TG - Stainless steel tray guides
- Remove (*) from model code for non-NSF models

ROUND TUBE DISH DISPENSER

- STAINLESS STEEL
- SELF LEVELING
- FIELD ADJUSTABLE

- MOBILE
- ENCLOSED
- HEATED

Model Series: DTH-M-*

APPLICATION:

- Cafeterias
- Serving lines
- Tray make-up systems
- Back up storage
- Modular buffet systems

CAPACITY:

- Approximately 5 to 6 doz. plates per tube
- Refer to factory for bowl capacities

DISPENSES:

- Stackable Plates
- Stackable Bowls
- Misc. stackable round chinaware

SPECIFICATIONS:

- Stainless steel; Type 304
- “Heliarc” and spot-welded construction
- Removable top; all seams fully welded & polished
- Double wall insulated construction
- Accommodates various round drop-in tube dispensers (DTO-DI)
- Dispensers are equipped with non-rusting springs that are heat treated for strength & durability
- Push handle on one end of unit
- Wrap-around bumper
- Clean out door in bottom
- 4 > 5” swivel, non-marking casters with 4 side brakes
- Variable heat setting thermostat with on/off pilot light indicator
- Approved power supply cord with 3 prong end cap

OPTIONAL FEATURES [1]:

- NP - Stainless steel nameplate
- PP - Push posts on top of unit
(Handle is removed when adding push posts)
- TC - Tube covers for tube dispensers
- LAM - Laminate décor on all sides
- PC - Powder epoxy coating
- Remove (*) from model code for non-NSF models

5 and 6 tube units available.

China diameter to be supplied with order.

See model series DTO-DI for more information on Tube Dispensers.

BLIXERS

Prepare liquidized food as well as chop, grind, purée, emulsify...all in one machine!

Blixer 3

Blixer 4

Blixer 4V

Blixer 5

Blixer 5V

Blixer 6

Blixer 6V

- **BLIXERS** prepare mixed liquid or semi-liquid foods, even tube feedings, easily by combining the best features of the food processor and blender/mixer.
- Comes with stock-pot shaped stainless steel cutter bowl with handle, stainless steel cutter blade, and patented food wiper assembly to wipe top and sides of bowl during processing for overall mixing.
- Leakproof, see-thru lid to view processing progress and add ingredients without stopping or opening machine.
- Large capacity machine – 3.5 qt, 4 qt., 5.5 qt., and 7 qt. capacity models. Other Blixers available up to 60 Qt.
- 4 qt., 5.5 qt., and 7 qt. machines available in 2-speed or variable speed.
- Easily disassembled for cleaning.
- Long-lasting, reliable motors require minimum maintenance.
- 1 year warranty on parts and labor.

Blixers were developed to take the hard work out of preparing mixed liquid or semi-liquid foods. Blixers allow the same foods to be served to everyone enabling all patients to get the same nourishing nutrients. Recommended for use in **healthcare facilities** for preparing spoon feedings, semi-liquid feedings, and liquid feedings (for tube feedings); **restaurants** for preparing combo butter mixtures, sauces, salad dressings, mousses, and grinding herbs, seeds, lobster, scampi, etc.

KVE

Capture Jet® Hood with Side-Jet Technology

K42

KVE/PC/xxxx11507/EN

The KVE Capture Jet® hood with Side-Jet technology is a highly efficient kitchen ventilation hood that removes contaminated air and excess heat emitted by cooking equipment, helping to provide a comfortable and clean environment.

The KVE hood uses the advanced Halton Capture Jet® with Side-Jet technology to improve the capture and containment of the airflows generated by the cooking equipment. Overall exhaust airflow rates can be reduced up to 30% from those of traditional kitchen hoods.

The Capture Jet® hood with Side-Jet technology is based on the high entrainment efficiency of a compact, high-velocity capture air jet. The capture air jets efficiently induce ambient air at the critical front face area of the hood, minimizing the spillage of the contaminated air and maintaining good air quality in the chef's work area.

- Improved indoor air quality with reduced energy use. Halton Capture Jet® with Side-Jet technology reduces the exhaust airflow rates required and improves the capture and containment efficiency of the hood.
- High efficiency grease filtration using UL and NSF classified Halton KSA multi-cyclone filters for removal of up to 95% of particles with a size of 8 microns per ASTM F2519.
- T.A.B.™ (testing and balancing) ports, which allow accurate and effective commissioning.
- AccuFlow provides a visual indicator that the system is at design exhaust air values at the face of the hood. A pressure transducer measures design exhaust rate and provides a green indicator light.
- Standard LED light fixtures.
- Stainless steel, welded design.

NOTE: Factory must be advised of any special requirements of the Authority Having Jurisdiction at time of quote.

Part	Description
1	18 Ga. Stainless steel
2	Exhaust duct collar
3	Capture Jet air
4	Light fixture
5	KSA grease filters
6	Integrated Capture Jet fan intake
7	Switch panel (optional)
8	Grease collection cup
9	Hanger bracket

Construction

The KVE hood combines Capture Jet® with Side-Jet technology, light fixtures, airflow measurement T.A.B. ports and KSA grease filters. The hood shall bear ETL or UL label. The ETL/UL listed range hood without exhaust fire damper per standard 710 and be fabricated in compliance with NFPA-96, and shall bear the NSF seal of approval.

The exposed parts are manufactured from 18 ga. stainless steel.

The hood ends have double side wall construction. A concealed collection cup is fitted into the grease drain channel for easy removal of the grease and dirt extracted by the KSA multi-cyclone filters.

DIMENSIONS

KVE	inches
Length	48....168
Width	42....84
Height	24....30

QUICK DATA

Length	Recommended Exhaust air volumes	Recommended Capture Jet air volumes
48....168	* Actual exhaust air volumes are calculated by using the heat load based design method utilizing the Halton H.E.L.P. (Hood Engineering Layout Program)	Capture Jet average pressure 0.40" WC (without Side Jet option), 0.20" WC (with Side Jet option).
	*Average operating range from light to to heavy duty cooking loads 135 cfm to 275 cfm per linear foot	*Airflows established by a pressure reading *WC= Water Column

*Hoods are ETL or UL listed for USA per UL710, and CANADA per ULC-S646 standards, and NSF certified.

Function

The kitchen hood above cooking appliances contains the rising warm air and contaminants (1). The capture air jets (2) direct the contaminated air toward the KSA grease filters (3), where grease particles and other impurities are separated from the exhaust air using the cyclone separation principle.

- 10 Double wall construction
- 11 AccuFlow Display

The extracted grease and other air contaminants flow into a drain channel and toward the collection tray/cup (4).

The vertical capture air improves efficiency, and allows the hood to operate at lower exhaust airflows. This is achieved by modifying the capture jet configuration on the front of the hood (5). The side jets allow for enhanced performance at the ends of the hood (6).

Accessories

- Closure Panels - for canopies below ceiling level
- Backsplash
- Side Skirts (optional)
- KFR - Filter Removal Tool
- Recessed fluorescent
- Recessed incandescent
- Incandescent globe type lights
- MEP - Master Electrical Panels
- Face or remote mounted switch panels
- Factory prepiped Fire Protection
- Powder coated
- Listed exhaust duct balancing damper
- Custom/Designer stainless steel exterior textures
- Hood mounted fire cabinet
- M.A.R.V.E.L. Demand Control w/VFD by Halton

Balancing of Capture Jet® Hoods

The capture jet and exhaust air flows are easily and accurately determined by measuring the pressure difference from the T.A.B. ports mounted in each plenum. Corresponding air flows can be read from the diagrams provided.

All T.A.B. readings assume cold conditions. To adjust for an exhaust temperature of 110 °F, multiply the readings by a factor of 0.93.

Exhaust air flow vs. pressure differential

Suggested specifications

General

Kitchen hood inner liner shall be constructed from 18 gauge stainless steel where exposed. The kitchen hoods shall be supplied complete with outer casing/ main body, inner liner, exhaust duct, pressure measurement T.A.B. ports, Outer casing panels shall be constructed of stainless steel with a brushed satin finish. Each joint shall be welded and liquid tight, avoiding harmful dripping of condensation.

All exposed welds are ground and polished to the original finish of metal. Canopy ends shall be double sided wall construction (no single wall hoods permitted).

Exhaust

The exhaust airflow will be based on the convective heat generated by the appliances underneath each hood system. Submittals shall include convective heat calculations based on the input power of the appliance served.

Capture Jet® with Side-Jet Technology

The hood shall be designed with Capture Jet® with Side-Jet technology to reduce the exhaust airflow rate required, and to improve the capture and containment efficiency of the hood, while reducing energy consumption. The Capture Jet® air shall be introduced through a special discharge panel and shall not exceed 10% of the calculated exhaust airflow. The Capture Jet® discharge velocity will be a minimum of 1500 feet per minute. Slot or grille type discharge shall not be used. The Capture Jet® shall be internally mounted with a speed control and will not require a fire damper or electronic shut down in fire mode.

AccuFlow

The Capture Jet hood will come standard with the Halton AccuFlow indicator. The AccuFlow provides a visual indicator that the system is at design exhaust air values. A pressure transducer measures design exhaust rate and this is interpreted by the AccuFlow sensor by a steady green indicator light. Should the system be below design airflow, the indicator light will blink once in sequence. Should the indicator light blink twice in sequence, the exhaust airflow is above design

T.A.B. Ports

The airflows through the extractors and the Capture Jet® air chamber are to be determined through the integral T.A.B. (Testing and Balancing) ports mounted in the hood. The airflows are to be determined by the pressure vs. airflow curves supplied by Halton.

Grease Filters

The hood shall be equipped with KSA multi-cyclone stainless steel grease extractors. The KSA filters shall be NSF and UL classified. The grease extraction efficiency is 93% on particles with a diameter of 5 microns and 98% on particles with a diameter of 15 microns or larger as tested by an independent testing laboratory. The pressure loss over the extractor shall not exceed 0.50" of water at flow rates approved by U.L. for heavy load cooking. Sound levels shall not exceed an NC rating of 55. Baffle or slot type extractors shall not be used.

Light Fixtures

Hood lights shall be U.L. Listed LED fixtures, suitable for grease hoods. 20 Watts per fixture, 50 foot candles at cooking surface. Option: Recessed fluorescent, recessed incandescent or incandescent globe type lighting. The lighting shall be suitable for single phase power supply.

Control Panel

The master electrical panel consisting of one starter per motor with overload protection will be supplied. Control panel to hood or remote mounted.

Fire Suppression System

The kitchen hood fire extinguishing system shall protect the kitchen hood against grease fires by a completely automatic fire control system, which consists of wet chemical. The fire detection system shall be capable of detecting fire in the hood, duct, or surface equipment and shall automatically discharge liquid extinguishing agent into the plenum chamber, exhaust duct collar, and cooking appliance areas to ensure against re-ignition or re-flash. System components shall include a spring-loaded fusible link detector, wall mounted emergency pull stations, wall mounted automan and cabinet, and a mechanical gas valve installed in the gas line serving the cooking equipment. System installation shall be made by an authorized representative of the system manufacturer and conform to U.L. 300 requirements and local codes.

R-102™ RESTAURANT FIRE SUPPRESSION SYSTEMS

Data/Specifications

FEATURES

- Low pH Agent
- Proven Design
- Reliable Gas Cartridge Operation
- Aesthetically Appealing
- UL Listed – Meets Requirements of UL 300
- ULC Listed – Meets Requirements of ULC/ORD-C1254.6
- CE Marked

APPLICATION

The ANSUL® R-102™ Restaurant Fire Suppression System is an automatic, pre-engineered, fire suppression system designed to protect areas associated with ventilating equipment including hoods, ducts, plenums, and filters. The system also protects auxiliary grease extraction equipment and cooking equipment such as fryers; griddles and range tops; upright, natural charcoal, or chain-type broilers; electric, lava rock, mesquite, or gas-radiant char-broilers; and woks.

The system is ideally suitable for use in restaurants, hospitals, nursing homes, hotels, schools, airports, and other similar facilities.

Use of the R-102 system is limited to indoor applications or locations that provide weatherproof protection within tested temperature limitations. The regulated release and tank assemblies must be mounted in an area where the air temperature will not fall below 32 °F (0 °C) or exceed 130 °F (54 °C). The system must be designed and installed within the guidelines of the UL/ULC Listed Design, Installation, Recharge, and Maintenance Manual.

SYSTEM DESCRIPTION

The restaurant fire suppression system is a pre-engineered, wet chemical, cartridge-operated, regulated pressure type with a fixed nozzle agent distribution network. It is listed with Underwriters Laboratories, Inc. (UL/ULC).

004215

The system is capable of automatic detection and actuation as well as remote manual actuation. Additional equipment is available for building fire alarm panel connections, electrical shutdown and/or interface, and mechanical or electrical gas line shut-off applications.

The detection portion of the fire suppression system allows for automatic detection by means of specific temperature-rated alloy type fusible links, which separate when the temperature exceeds the rating of the link, allowing the regulated release to actuate.

43

004212

A system owner's guide is available containing basic information pertaining to system operation and maintenance. A detailed technical manual, including system description, design, installation, recharge and resetting instructions, and maintenance procedures, is available to qualified individuals.

The system is installed and serviced by authorized distributors that are trained by the manufacturer.

The basic system consists of an ANSUL AUTOMAN® regulated release assembly which includes a regulated release mechanism and a wet chemical storage tank housed within a single enclosure. Nozzles with blow-off caps, detectors, cartridges, agent, fusible links, and pulley elbows are supplied in separate packages in the quantities needed for fire suppression system arrangements.

Additional equipment includes a remote manual pull station(s), mechanical and electrical gas valves, and electrical switches for automatic equipment and gas line shut-off. Accessories can be added such as alarms, warning lights, etc., to installations where required.

Additional tanks and corresponding equipment can be used in multiple arrangements to allow for larger hazard coverage. Each tank is limited to a listed maximum amount of flow numbers.

004213

COMPONENT DESCRIPTION

Wet Chemical Agent – The extinguishing agent is a mixture of organic salts designed for rapid flame knockdown and foam securement of grease related fires. It is available in plastic containers with instructions for wet chemical handling and usage.

Agent Tank – The agent tank is installed in a stainless steel enclosure or wall bracket. The tank is constructed of stainless steel.

Tanks are available in two sizes: 1.5 gallon (5.7 L) and 3.0 gallon (11.4 L). The tanks have a working pressure of 110 psi (7.6 bar), a test pressure of 330 psi (22.8 bar), and a minimum burst pressure of 660 psi (45.5 bar).

The tank includes an adaptor/tube assembly. The adaptor assembly includes a chrome-plated steel adaptor with a 1/4 in. NPT female gas inlet, a 3/8 in. NPT female agent outlet, and a stainless steel agent pick-up tube. The adaptor also contains a bursting disc seal which helps to prevent the siphoning of agent up the pipe during extreme temperature variations.

Regulated Release Mechanism – The regulated release mechanism is a spring-loaded, mechanical/pneumatic type capable of providing the expellant gas supply to one, two, or three agent tanks depending on the capacity of the gas cartridge used. It contains a factory installed regulator deadset at 110 psi (7.6 bar) with an external relief of approximately 180 psi (12.4 bar). It has automatic actuation capabilities by a fusible link detection system and remote manual actuation by a mechanical pull station.

The regulated release mechanism contains a release assembly, regulator, expellant gas hose, and agent storage tank housed in a stainless steel enclosure with cover. The enclosure contains knock-outs for 1/2 in. conduit. The cover contains an opening for a visual status indicator.

It is compatible with mechanical gas shut-off devices; or, when equipped with a field or factory-installed switch and manual reset relay, it is compatible with electric gas line or appliance shut-off devices.

Regulated Actuator Assembly – When more than two agent tanks (or three 3.0 gallon (11.4 L) tanks in certain applications) are required, the regulated actuator is available to provide expellant gas for additional tanks. It is connected to the cartridge receiver outlet of the regulated release mechanism providing simultaneous agent discharge. It contains a regulated actuator deadset at 110 psi (7.6 bar) with an external relief of approximately 180 psi (12.4 bar). It has automatic actuation capabilities using pressure from the regulated release mechanism cartridge.

The regulated actuator assembly contains an actuator, regulator, expellant gas hose, and agent tank housed in a stainless steel enclosure with cover. The enclosure contains knockouts to permit installation of the expellant gas line.

Discharge Nozzles – Each discharge nozzle is tested and listed with the R-102 system for a specific application. Nozzle tips are stamped with the flow number designation (1/2, 1, 2, or 3). Each nozzle must have a metal or rubber blow-off cap to keep the nozzle tip orifice free of cooking grease build-up.

Agent Distribution Hose – Kitchen appliances manufactured with or resting on casters (wheels/rollers) may include an agent distribution hose as a component of the suppression system. This allows the appliance to be moved for cleaning purposes without disconnecting the appliance fire suppression protection. The hose assembly includes a restraining cable kit to limit the appliance movement within the range (length) of the flexible hose.

Flexible Conduit – Flexible conduit allows for quicker installations and the convenience of being able to route the cable over, under and around obstacles. Flexible conduit can be used as a substitute for standard EMT conduit or can be used with EMT conduit.

Flexible conduit can be used only with the Molded Remote Manual Pull Station.

Pull Station Assembly – The remote manual pull station is made out of a molded red composite material. The red color makes the pull station more readily identifiable as the manual means for fire suppression system operation.

The pull station is compatible with the ANSUL Flexible Conduit.

APPROVALS

- UL/ULC Listed
- CE Marked
- New York City Department of Buildings
- LPCB
- TFR1
- Marine Equipment Directive (MED)
- DNV
- ABS
- Lloyd's Register
- Meets requirements of NFPA 96 (Standard for the Installation of Equipment for the Removal of Smoke and Grease-Laden Vapors from Commercial Cooking Equipment)
- Meets requirements of NFPA 17A (Standard on Wet Chemical Extinguishing Systems)

ORDERING INFORMATION

Order all system components through your local authorized ANSUL Distributor.

SPECIFICATIONS

An ANSUL R-102 Fire Suppression System shall be furnished. The system shall be capable of protecting all hazard areas associated with cooking equipment.

1.0 GENERAL

1.1 References

- 1.1.1 Underwriters Laboratories, Inc. (UL)
 - 1.1.1.1 UL Standard 1254
 - 1.1.1.2 UL Standard 300
- 1.1.2 Underwriters Laboratories of Canada (ULC)
 - 1.1.2.1 ULC/ORD-C 1254.6
- 1.1.3 National Fire Protection Association (NFPA)
 - 1.1.3.1 NFPA 96
 - 1.1.3.2 NFPA 17A

1.2 Submittals

- 1.2.1 Submit two sets of manufacturer's data sheets
- 1.2.2 Submit two sets of piping design drawings

1.3 System Description

- 1.3.1 The system shall be an automatic fire suppression system using a wet chemical agent for cooking grease related fires.
- 1.3.2 The system shall be capable of suppressing fires in the areas associated with ventilating equipment including hoods, ducts, plenums, and filters as well as auxiliary grease extraction equipment. The system shall also be capable of suppressing fires in areas associated with cooking equipment, such as fryers; griddles and range tops; upright, natural charcoal, or chain-type broilers; electric, lava rock, mesquite or gas-radiant char-broilers; and woks.
- 1.3.3 The system shall be the pre-engineered type having minimum and maximum guidelines established by the manufacturer and listed by Underwriters Laboratories (UL/ULC).
- 1.3.4 The system shall be installed and serviced by personnel trained by the manufacturer.
- 1.3.5 The system shall be capable of protecting cooking appliances by utilizing either dedicated appliance protection and/or overlapping appliance protection.

1.4 Quality Control

- 1.4.1 Manufacturer: The R-102 Restaurant Fire Suppression System shall be manufactured by a company with at least forty years experience in the design and manufacture of pre-engineered fire suppression systems. The manufacturer shall be ISO 9001 registered.
- 1.4.2 Certificates: The wet agent shall be a specially formulated, aqueous solution of organic salts with a pH range between 7.7 – 8.7, designed for flame knock-down and foam securement of grease-related fires.

1.5 Warranty, Disclaimer, and Limitations

- 1.5.1 The pre-engineered restaurant fire suppression system components shall be warranted for five years from date of delivery against defects in workmanship and material.

1.6 Delivery

- 1.6.1 Packaging: All system components shall be securely packaged to provide protection during shipment.

1.7 Environmental Conditions

- 1.7.1 The R-102 system shall be capable of operating within a temperature range of 32 °F to 130 °F (0 °C to 54 °C).

2.0 PRODUCT

2.1 Manufacturer

- 2.1.1 Tyco Fire Suppression & Building Products, One Stanton Street, Marinette, Wisconsin 54143-2542, Telephone (715) 735-7411.

2.2 Components

- 2.2.1 The basic system shall consist of an ANSUL AUTOMAN regulated release assembly which includes a regulated release mechanism and a wet chemical storage tank housed within a single enclosure. Nozzles, blow-off caps, detectors, cartridges, agent, fusible links, and pulley elbows shall be supplied in separate packages in the quantities needed for fire suppression system arrangements. Additional equipment shall include remote manual pull station, mechanical and electrical gas valves, and electrical switches for automatic equipment and gas line shut-off, and building fire alarm control panel interface.
- 2.2.2 Wet Chemical Agent: The extinguishing agent shall be a specially formulated, aqueous solution of organic salts with a pH range between 7.7 – 8.7, designed for flame knockdown and foam securement of grease related fires.
- 2.2.3 Agent Tank: The agent tank shall be installed in a stainless steel enclosure or wall bracket. The tank shall be constructed of stainless steel. Tanks shall be available in two sizes; 1.5 gallon (5.7 L) and 3.0 gallon (11.4 L). The tank shall have a working pressure of 110 psi (7.6 bar), a test pressure of 330 psi (22.8 bar), and a minimum burst pressure of 660 psi (45.5 bar). The tank shall include an adaptor/tube assembly containing a burst disc union.
- 2.2.4 Regulated Release Mechanism: The regulated release mechanism shall be a spring-loaded, mechanical/pneumatic type capable of providing the expellant gas supply to one or two agent tanks depending on the capacity of the gas cartridge used or three 3.0 gallon (11.4 L) agent storage tanks in certain applications. It shall contain a factory installed regulator deadset at 110 psi (7.6 bar) with an external relief of approximately 180 psi (12.4 bar).
It shall have the following actuation capabilities: automatic actuation by a fusible link detection system and remote manual actuation by a mechanical pull station.
The regulated release mechanism shall contain a release assembly, regulator, expellant gas hose, and agent storage tank housed in a stainless steel enclosure with cover. The enclosure shall contain knock-outs for 1/2 in. conduit. The cover shall contain an opening for a visual status indicator.
It shall be compatible with mechanical gas shut-off devices; or, when equipped with a field or factory-installed switch(es), it shall be compatible with electric gas line or appliance shut-off devices, or connections to a building fire alarm control panel.
- 2.2.5 Regulated Actuator Assembly: When more than two agent tanks or three agent tanks in certain applications are required, the regulated actuator shall be available to provide expellant gas for additional tanks. It shall be connected to the cartridge receiver outlet of the regulated release mechanism providing simultaneous agent discharge. The regulator shall be deadset at 110 psi (7.6 bar) with an external relief of approximately 180 psi (12.4 bar). The regulated actuator assembly shall contain an actuator, regulator, expellant gas hose, and agent tank housed in a stainless steel enclosure with cover. The enclosure shall contain knockouts to permit installation of the expellant gas line.
- 2.2.6 Discharge Nozzles: Each discharge nozzle shall be tested and listed with the R-102 system for a specific application. Nozzles tips shall be stamped with the flow number designation (1/2, 1, 2, or 3). Each nozzle shall have a metal or rubber blow-off cap to keep the nozzle tip orifice free of cooking grease build-up.

SPECIFICATIONS

2.0 PRODUCT (Continued)

2.2 Components (Continued)

- 2.2.7 Distribution Piping: Distribution piping shall be Schedule 40 black iron, chrome-plated, or stainless steel conforming to ASTM A120, A53, or A106.
- 2.2.8 Detectors: The detectors shall be the fusible link style designed to separate at a specific temperature.
- 2.2.9 Cartridges: The cartridge shall be a sealed steel pressure vessel containing either carbon dioxide or nitrogen gas. The cartridge seal shall be designed to be punctured by the releasing device supplying the required pressure to expel wet chemical agent from the storage tank.
- 2.2.10 Agent Distribution Hose: An optional agent distribution hose shall be available for kitchen appliances manufactured with or resting on casters (wheels/rollers). This shall allow the appliance to be moved for cleaning purposes without disconnecting the appliance fire suppression protection. Hose assembly shall include a restraining cable kit to limit the appliance movement within the range (length) of the flexible hose.
- 2.2.11 Flexible Conduit: The manufacturer supplying the Restaurant Fire Suppression System shall offer flexible conduit as an option to rigid EMT conduit for the installation of pull stations and/or mechanical gas valves. The flexible conduit shall be UL Listed and include all approved components for proper installation.
- 2.2.12 Pull Station Assembly: The Fire Suppression System shall include a remote pull station for manual system actuation. The pull station shall be designed to include a built-in guard to protect the pull handle. The pull station shall also be designed with a pull handle to allow for three finger operation and shall be red in color for quick visibility.

3.0 IMPLEMENTATION

3.1 Installation

- 3.1.1 The R-102 fire suppression system shall be designed, installed, inspected, maintained, and recharged in accordance with the manufacturer's listed instruction manual.

3.2 Training

- 3.2.1 Training shall be conducted by representatives of the manufacturer.

Specification

SelfCookingCenter® whiteefficiency® 202 E (20 x 18" x 26"/40 x 12" x 20")

reference number:

SelfCookingControl® - 7 operating modes

Function - Automatic-Mode

In the 7 operating modes, the unit's process automatically detects product-specific requirements, the size of the food to be cooked and the load size. Cooking time, temperature and the ideal cooking cabinet climate are continuously adjusted to achieve the result you want. The estimated remaining cooking time is displayed.

Combi-Steamer mode

Steam between 85-265 °F (30-130 °C)

Hot-air from 85-575 °F (30-300 °C)

Combination of steam and hot-air 85-575 °F (30-300 °C)

HiDensityControl®

patented distribution of the energy in the cooking cabinet

Efficient LevelControl® ELC®

Mixed loads with individual rack monitoring and load-specific time adjustment for every rack

CareControl

Intelligent cleaning and care system

Description

- Cooking appliance for automatically cooking (Automatic mode) meat, poultry, fish, side dishes/vegetables, egg dishes/desserts, bakery products and for automatic finishing®. With an intelligent system for optimizing mixed loads in production and in à la carte service as well as a fully-automatic cleaning and care system.
- Hot-air steamer (combi-steamer mode) conforming to DIN 18866 for most of the cooking methods used in commercial kitchens for the optional use of steam and hot-air, individually, in succession or in combination.

Working safety

- Detergent and Care® tabs (solid detergents) for optimum working safety
- HACCP data output and software update via integral USB port
- Safety temperature limiter for steam generator and hot-air heating
- Maximum rack height 5 ¼ ft. (1.60 m)
- Integral fan impeller brake

Operation

- Self-teaching operation, automatically adapts to actual usage
- MyDisplay – Self-configurable, user-specific operating display (images, text, etc.)
- 8.5" TFT color monitor and touch screen with self-explanatory symbols for ease of operation
- Application and user manuals can be called up on the unit display for the current actions

Cleaning, care and operational safety

- Automatic cleaning and care system for cooking cabinet and steam generator works regardless of the water pressure supplied
- 7 cleaning stages for unsupervised cleaning and care - even overnight
- Automatic cleaning and descaling of the steam generator
- Automatic cleaning prompts indicating the cleaning stage and volume of chemicals in relation to the level of soiling
- Soiling and care status are displayed on the monitor
- Diagnostic system with automatic service notices displayed
- Self-Test function for actively checking unit's functions

Features

- Core temperature probe using 6 measuring points with automatic error correction. Positioning aid for core temperature probe included
- Climate management - humidity measured, set and regulated to one percent accuracy. Actual humidity in the cooking cabinet can be set and read on the control panel in Combi-Steamer modes
- Individual Programming of at least 350 cooking programs with up to 12 steps
- Humidification variable in 3 stages from 85-525 °F (30-260 °C) in hot-air or combination modes
- USB Interface
- High-performance, fresh-steam generator with automatic descaling
- 5 fan air speeds, programmable
- Integral, maintenance-free grease extraction system with no additional grease filter
- Operation without a water softener and without additional descaling
- Cool-down function for fast cabinet fan cooling
- Automatic adaptation to the installation location (height, climate, etc.)
- Unit door with rear-ventilated double-glass panel and hinged inner panel
- Mobile oven rack (rail spacing 2 1/2 " (63 mm)) with tandem castors, wheel diameter 5" (125 mm)
- Cooking cabinet door with integral sealing mechanism
- Material inside and out DIN 1.4301 stainless steel
- Fixed waste water connection conforming to SVGW requirements where permitted
- Splash and hose-proof to IPX 5
- Demand-related energy supply
- Lengthwise loading for 2/1, 1/1 GN accessories
- Separate solenoid valves for soft and filtered water
- Hand shower with automatic retracting system
- 5 programmable proofing stages
- Automatic, pre-selected starting time with adjustable date and time

Specification/Data sheet

SelfCookingCenter® whiteefficiency® 202 E (20 x 18" x 26"/40 x 12" x 20")

1. Common water supply (cold water) "Single" water connection as shipped
2. Water supply cold water / condensate "Split" water connection
3. Water supply cold / Treated "Split" water connection
4. Drain 2" OD
5. Electrical connection wire entrance
6. Chassis Ground connection
7. Steam Vent pipe 3" (78mm)
11. Minimum Clearance 2" (50 mm)
12. Left side clearance 20" recommended for servicing of unit without the ability to move unit while connected.
13. Measurements in mm (inch)

Installation

- The left hand clearance must be a minimum of 14" (350mm) if heat sources are affecting the left side of the unit
- Installations must comply with all local electrical, plumbing and ventilation codes

Options

- Marine version
- Security version/prison version
- Sous-Vide core temperature probe
- Interface Ethernet
- Safety door lock
- Externally attached core temperature probe
- Mobile oven rack
- Lockable control panel
- Special voltages

Accessories

- GN Containers, Trays, Grids
- Thermocover
- KitchenManagement System
- Heat shield for left hand side panel
- Superspike (poultry grids), CombiGrill®
- Special Cleaner tablets and care tabs
- Ramp for mobile oven rack
- Lamb and suckling pig spit
- Mobile plate rack

Specification

Combi-Duo Mobile SelfCookingCenter® whiteefficiency® 61 E on 101 E (16 x 1/1 GN) (16 x 12" x 20"/16 X 13" x 18")

reference number:

SelfCookingControl® - 7 operating modes

Function - Automatic-Mode

In the 7 operating modes, the unit's process automatically detects product-specific requirements, the size of the food to be cooked and the load size. Cooking time, temperature and the ideal cooking cabinet climate are continuously adjusted to achieve the result you want. The estimated remaining cooking time is displayed.

Combi-Steamer mode

Steam between 85-265 °F (30-130 °C)

Hot-air from 85-575 °F (30-300 °C)

Combination of steam and hot-air 85-575 °F (30-300 °C)

HiDensityControl®

patented distribution of the energy in the cooking cabinet

Efficient LevelControl® ELC®

Mixed loads with individual rack monitoring and load-specific time adjustment for every rack

CareControl

Intelligent cleaning and care system

Description

- 2 individual units for the automatic cooking (Automatic-Mode) meat, poultry, fish, side dishes/vegetables, egg dishes/desserts, bakery products and for automatic finishing®. With an intelligent system for optimizing mixed loads in production and in à la carte service as well as a fully-automatic cleaning and care system.
- 2 individual units (Combi-Steamer Mode) for most cooking methods, with optional use of steam and hot-air, separately, sequentially or combined.

Working safety

- Detergent and Care® tabs (solid detergents) for optimum working safety
- HACCP data output and software update via integral USB port
- Safety temperature limiter for steam generator and hot-air heating
- Integral fan impeller brake

Combi-Duo / Stacking Kit

- 4 heavy-duty casters, 2 with brakes; intermediate frame between the units . Combi-Duo / Stacking Kit Article number 60.71.927

Operation

- Self-teaching operation, automatically adapts to actual usage
- MyDisplay – Self-configurable, user-specific operating display (images, text, etc.)
- 8.5" TFT color monitor and touch screen with self-explanatory symbols for ease of operation
- Application and user manuals can be called up on the unit display for the current actions

Cleaning, care and operational safety

- Automatic cleaning and care system for cooking cabinet and steam generator works regardless of the water pressure supplied
- 7 cleaning stages for unsupervised cleaning and care - even overnight
- Automatic cleaning and descaling of the steam generator
- Automatic cleaning prompts indicating the cleaning stage and volume of chemicals in relation to the level of soiling
- Soiling and care status are displayed on the monitor
- Diagnostic system with automatic service notices displayed
- Self-Test function for actively checking unit's functions

Features

- Core temperature probe using 6 measuring points with automatic error correction. Positioning aid for core temperature probe included
- Climate management - humidity measured, set and regulated to one percent accuracy. Actual humidity in the cooking cabinet can be set and read on the control panel in Combi-Steamer modes
- Individual Programming of at least 350 cooking programs with up to 12 steps
- USB Interface
- High-performance, fresh-steam generator with automatic descaling
- 5 fan air speeds, programmable
- Integral, maintenance-free grease extraction system with no additional grease filter
- Operation without a water softener and without additional descaling
- Separate solenoid valves for soft and filtered water
- Cool-down function for fast cabinet fan cooling
- Automatic adaptation to the installation location (height, climate, etc.)
- Unit door with rear-ventilated double-glass panel and hinged inner panel
- Removable, swivelling grid shelves (distance between rails 2 5/8" (68 mm))
- Material inside and out DIN 1.4301 stainless steel
- Fixed waste water connection conforming to SVGW requirements where permitted
- Splash and hose-proof to IPX 5
- Demand-related energy supply
- Lengthwise loading for 1/1, 1/2, 2/3, 1/3, 2/8 GN accessories
- 5 programmable proofing stages
- Automatic, pre-selected starting time with adjustable date and time
- Humidification variable in 3 stages from 85-525 °F (30-260 °C) in hot-air or combination modes
- Hand shower with automatic retracting system

Specification Sheet

Short Form Specifications

Eagle Panco® Multiple Purpose Racks, model _____ . Extruded aluminum upright frame with angular keyhole slots on 2½" centers. Adjustable universal slides with special wide lip. Top and bottom slides are welded to uprights, remaining slides on 2½" centers. Furnished with 5"-diameter casters. Shipped assembled.

multiple purpose rack
model #MPR-12

Options / Accessories

- Casters with locking brakes
- Pan stops
- Extra universal angle slides
- Rotary bumpers

SOLUTIONS/BENEFITS

2.7 H.P. Motor

Durability

- Heavy-duty to meet the most demanding operations

Gear Transmission

Durability, Reliability

- Ensures consistent performance and minimum downtime under heavy loads

Four Fixed Speeds plus Stir Speed

Flexibility, Reliability, Consistency

- For incorporating, blending, mixing ingredients
- Supports consistent results and thorough mixing

Shift-on-the-Fly™ Controls

Flexibility

- Allows operator to change speeds while mixer is running

Patented soft start Agitation Technology

Sanitation

- Each speed has a soft transition into a higher speed to reduce the chances of product splash-out

50-Minute SmartTimer™

Convenience, Ease of Use, Consistency

- Supports recipe mixing times
- Provides accurate results and eliminates overmixing

Automatic Time Recall

Productivity, Consistency

- Remembers the last time set for each speed
- Great for multiple batches

Ergonomic Swing-Out Bowl

Ease of Use, Convenience

- Easy loading and unloading of products
- Single Point Bowl Installation allows for simple mounting and removal of bowl
- Bowl Lock ensures mixer bowl is properly in place for mixer to operate

Stainless Steel Bowl Guard

Protection

- Safety interlock prevents operation when front portion of guard is out of position

Hobart Accessories

Durability, Flexibility, Simplicity

- Hobart Quick Release™ agitators allow for simple installation and removal from agitator shaft
- Hobart accessories are designed for long-term usage under heavy-duty conditions
- Large array of accessories provide multiple uses for recipe and product processing

HL600 MIXER CAPACITY CHART

Recommended Maximum Capacities - dough capacities based on 70°F. water and 12% flour moisture.

PRODUCT	AGITATORS SUITABLE FOR OPERATION	HL600
CAPACITY OF BOWL (QTS. LIQUID)		60
Egg Whites	D	2 qts.
Mashed Potatoes	B & C	40 lbs.
Mayonnaise (Qts. of Oil)	B or C or D	18 qts.
Meringue (Qts. of Water)	D	1½ qts.
Waffle or Hot Cake Batter	B	24 qts.
Whipped Cream	D or C	12 qts.
Cake, Angel Food (8-10 oz. cake)	C or I	45
Cake, Box or Slab	B or C	50 lbs.
Cake, Cup	B or C	60 lbs.
Cake, Layer	B or C	60 lbs.
Cake, Pound	B	55 lbs.
Cake, Short (Sponge)	C or I	45 lbs.
Cake, Sponge	C or I	36 lbs.
Cookies, Sugar	B	40 lbs.
Dough, Bread or Roll (Lt.-Med.) 60% AR §	ED	80 lbs.*
Dough, Heavy Bread 55% AR §	ED	60 lbs.*
Dough Pie	B & P	50 lbs.
Dough, Thin Pizza 40% AR (max. mix time 5 min.) §‡	ED	40 lbs.□
Dough, Med. Pizza 50% AR §‡	ED	70 lbs.□
Dough, Thick Pizza 60% AR §‡	ED	70 lbs.*
Dough, Raised Donut 65% AR	ED	30 lbs.†
Dough, Whole Wheat 70% AR	ED	70 lbs.
Eggs & Sugar for Sponge Cake	B & C or I	24 lbs.
Icing, Fondant	B	36 lbs.
Icing, Marshmallow	C or I	5 lbs.
Shortening & Sugar, Creamed	B	48 lbs.
Pasta, Basic Egg Noodle (max. mix time 5 min.)	ED	30 lbs.

NOTE: % AR (% Absorption Ratio) - Water weight divided by flour weight. Capacity depends on moisture content of dough. Above capacities based on 12% flour moisture at 70°F water temperature.

□ 1st Speed

* 2nd Speed

† 3rd Speed

§ If high gluten flour is used, reduce above dough batch size by 10%.

‡ 2nd Speed should never be used on 50% AR or lower products.

USE OF ICE REQUIRES A 10% REDUCTION IN BATCH SIZE.

1 gallon of water weighs 8.33 lbs.

NOTE: Attachment hub should not be used while mixing.

701 S Ridge Avenue, Troy, OH 45374
1-888-4HOBART • www.hobartcorp.com

LEGACY® HL600 MIXER

SPECIFICATIONS

MOTOR:

2.7 H.P. high torque motor.

200-240/50/60/3/1	18.0 (1 Phase) Amps
	10.0 (3 Phase) Amps
380-460/50/60/3	6.5 Amps

ELECTRICAL:

200-240/50/60/3/1, 380-460/50/60/3 – UL Listed.

CONTROLS:

Magnetic contactor with thermal overload protection. Internally sealed “Start-Stop” and Power Bowl Lift push buttons. Reduced voltage pilot circuit transformer is supplied for 380-460/50/60/3 machines. A 50-minute SmartTimer™ is standard. SmartTimer™ includes **Automatic Time Recall**, which remembers the last time set for each speed.

TRANSMISSION:

A rated 5.4 H.P. poly-V belt transfers power from motor to the input shaft then geared down to desired reduction with a constant gear mesh. Gears and shafts are heat-treated hardened alloy steel along with anti-friction ball bearings. Circulating oil and grease lubricants furnished to all gears and shafts.

SPEEDS:

	Agitator (RPM)	Attachment (RPM)
Stir	36	71
First	71	138
Second	123	241
Third	206	401
Fourth	362	707

BOWL GUARD:

Heavy-duty stainless steel wire front and solid stainless steel rear portion. Front portion of guard rotates easily to add ingredients and install or remove agitator. It detaches in seconds for cleaning in dishwasher or sink. Rear portion of guard can be quickly cleaned in position. Guard must be in closed position before mixer will operate. Bowl support interlock provides further protection.

POWER BOWL LIFT:

Powered by an electric motor, the bowl may be raised or lowered by fingertip control through the conveniently located switch. Bowl will remain in position until switch is activated. **Stir-on-Lift Feature:** Allows the agitator to run in Stir Speed while the mixer bowl is being raised. Once the bowl is in the raised position, the mixer automatically shifts into the preselected speed.

FINISH:

Metallic Gray Hybrid Powder Coat finish.

FOOTPADS:

Neoprene footpads are standard.

ATTACHMENT HUB:

Comes with front-mounted Hobart standard #12 taper attachment hub for use with #12 size attachments.

ATTACHMENTS AND ACCESSORIES:

The following are available at extra cost:

- | | |
|--------------------------|-------------------------|
| Stainless Steel Bowl | Bowl Splash Cover |
| “B” Flat Beater | Bowl Scraper |
| “C” Wing Whip | Bowl Truck |
| “D” Wire Whip | 40 Quart Accessories |
| “ED” Dough Hook | Ingredient Chute |
| “P” Pastry Knife | 9" Vegetable Slicer |
| “I” Heavy Duty Wire Whip | Meat Chopper Attachment |
| Bowl Extension Ring | |

Hobart Bowl Scraper

Hobart Ingredient Chute

Listed by Underwriters Laboratories Inc. and certified by NSF International.

Gear-driven. Gears are constant mesh heat-treated hardened alloy steel along with anti-friction ball bearings. Grease lubricants furnished to all gears and shafts.

SPEEDS:

	Agitator (RPM)	Attachment (RPM)
Stir	59	33
First (Low)	107	61
Second (Intermediate)	198	113
Third (High)	365	207

BOWL GUARD:

Heavy-duty stainless steel wire front and solid rear portion. Front portion of guard rotates easily to add ingredients and install or remove agitator. It detaches in seconds for cleaning in dishwasher or sink. Rear portion of guard can be quickly cleaned in position. Guard must be in closed position before mixer will operate. Bowl support interlock provides further protection.

BOWL LIFT:

Ergonomic style, hand crank operated, self-locking in top and bottom position.

FINISH:

Metallic Gray Hybrid Powder Coat finish.

ATTACHMENT HUB:

Comes with front-mounted Hobart standard #12 taper attachment hub for use with #12 size attachments.

ATTACHMENTS AND ACCESSORIES:

The following are available at extra cost:

- Stainless Steel Bowl
- “B” Flat Beater
- “C” Wing Whip
- “D” Wire Whip
- “ED” Dough Hook
- “P” Pastry Knife
- Bowl Splash Cover
- Bowl Scraper
- Ingredient Chute
- 9" Vegetable Slicer
- Meat Chopper Attachment
- Rubber Foot Pads
- Attachment Tray Support

Hobart Bowl Scraper

Hobart Ingredient Chute

Listed by Underwriters Laboratories Inc. and certified by NSF International.

Ingredient Bins

Slant Top

- Models **IBS20 – 21 gallon (81 L)**
IBS27 – 27 gallon (102 L)
IBS37 – 37 gallon (140 L)

Features & Benefits

- Stores and transports a wide variety of dry ingredients such as flour, sugar, rice or grains. Perfect for restaurants, food manufacturers or commissaries.
- Available in 21, 27 and 37 gallon (81, 102, 140 L) capacity to meet standard industry requirements for storage and transportation of bulk foods.
- One-piece, seamless single-wall polyethylene bin construction is extremely durable. Won't rust or corrode. Liquids and dry foods will not stick or seep between seams.
- FDA accepted material. Meets all food contact requirements and eliminates need for liners.
- Smooth interior and exterior are easy to clean.
- Injection molded Camwear® polycarbonate lids are transparent, break resistant and offer quick and easy identification of contents. Slide-back feature means easy access.
- Working height permits storage under standard work tables.
- Heavy-duty 3" (7,6 cm) casters, 2 front swivel, 2 fixed.
- No assembly required.
- Available in White (148) only with Clear (135) cover.

- High Fence
- Food Chute
- Heavy Meat Grip
- 4" Legs
- Product Tray

Specifications, Details and Dimensions on Inside and Back.

2812 SLICER

SOLUTIONS / BENEFITS

Home Start Position

Maximizes yield

- Carriage must be in "home position" before the slicer will start, ensuring full loaf slices

Close To Stop

Convenience, labor savings, energy savings, protection

- Closing of gauge plate turns off the slicer
- Protects knife edge

Gauge Plate Interlock

Ease of cleaning, protection

- Gauge plate must be closed to remove or tilt away carriage for cleaning and cannot be opened when carriage is tilted back or removed
- Protects knife edge during cleaning procedures

Carriage System Interlock

Protection

- Will not tilt away or remove if gauge plate indicator is not closed

No Volt Release

Protection

- Protects against unintentional starting of slicer
- Slicer must be restarted if power fails or slicer is unplugged

Exclusive Tilting, Removable Carriage System

Reduces labor, improves sanitation

- Tilt design allows for ease of midday cleaning
- Removable for complete cleaning and sanitation procedures

CleanCut™ Knife

Reduced cost of ownership, improved yield

- Thin edge design improves yield
- Super alloy edge lasts longer

Top Mounted Borazon Stone Sharpener

Ease of use, improved sanitation, reduced costs

- Single action sharpens and hones in just five seconds
- Removable and submersible for easy cleaning and sanitation
- Lifetime guaranteed Borazon sharpening stones provide maximum performance with reduced maintenance costs

Poly V-Belt Drive System

Performance, durability, reduced maintenance

- Patented design extends belt life while producing optimal slicing results
- Quieter operating slicer

Sanitary Anodized Aluminum Base

Improved sanitation, labor savings

- One piece base protects against possible growth of bacteria
- No cracks/crevices or bolt holes where product can lodge and bacteria may grow
- Easy cleanup and durable finish

Double-Action Indexing Cam

Increases reliability, easier to use, increased yield

- The first full revolution of the indexing knob provides precise control for shaving, chipping and thin slicing
- The second revolution opens the gauge plate quickly for thicker slicing
- Gauge plate holds position for consistent, precision slicing

Permanently Mounted Ring Guard

Protection

- Protects knife during operation and cleaning

Heavy Gauge Stainless Steel Knife Cover

Durability, ease of use, sanitation

- Twelve-gauge stainless steel maintains shape to ensure consistent fit
- Spring loaded knob for quick removal and easy cleanup
- One piece design for simplistic usage

Cleaning Leg

Improved sanitation, ease of use

- Props machine for easy cleaning underneath slicer

Removable Rear Deflector

Improved sanitation, ease of use

- Allows access for thorough cleaning
- No tools required means easy removal during cleaning

½ H.P. Knife Drive Motor

Durability, performance

- Reserve power runs at 400 rpm for optimum results

Nylon Carriage Roller

Performance

- Easy movement for manual operation

Electroless Nickel Plated Single Slide Rod with Reservoir Wick

Performance, durability, lower maintenance

- Smooth operation with continuous lubrication of carriage rod
- Resistant to rust

Stainless Steel Carriage

Improved sanitation, durability

- Maximum sanitation with minimum cleanup time
- Corrosion resistant, impact resistant

Ergonomic Style Handle

Operator satisfaction

- Comfortable manual operation

Meat Grip Options

Multiple choices for improved yield and consistency

- Front meat grip standard
- Heavy front meat grip available

**2812
SLICER**

SPECIFICATIONS

HOME POSITION START: Home-start ensures carriage is in a convenient position before starting the slicer.

CLOSE TO STOP: After slicing, a quick turn of the index knob to the closed position turns off the slicer.

GAUGE PLATE INTERLOCK: Gauge plate interlock protects knife edge when indicator is closed.

CARRIAGE SYSTEM INTERLOCK: Carriage will not tilt away or remove if gauge plate not closed.

NO VOLT RELEASE: In the event of power loss, slicer must be restarted before operation can continue.

TILTING REMOVABLE CARRIAGE SYSTEM: Positive angle carriage design enables operator to slice without manual feed. The stainless steel carriage system tilts back easily for midday cleaning and is removable for thorough cleaning and sanitation procedures. The carriage has 12½" manual travel.

CLEANCUT™ KNIFE: Another Hobart exclusive, the knife is constructed of 304L stainless steel and high performance super alloy. Knife is protected by a permanently mounted ring guard with integrated product deflector. The stainless steel knife cover provides easy access for cleaning. Gauge plate protects knife edge when indicator is closed. Knife cover is quickly removed with a quarter turn of the spring loaded locking knob.

TOP MOUNTED BORAZON STONE SHARPENER: One lever operation utilizing two Borazon stones to sharpen and hone in five seconds. Removable and top mounted. When sharpener is removed for cleaning, knife edge is shielded. Borazon stones have lifetime guarantee.

HOBART POLY V-BELT DRIVE SYSTEM: Knife is driven by a Hobart Poly V belt and runs at 400 rpm for optimal performance.

SANITARY ANODIZED ALUMINUM BASE: One-piece base protects against possible growth of bacteria. All surfaces are durable and smooth, presenting no holes or crevices in which food can lodge. Easy clean-up and durable finish to withstand harsh cleaning products.

DOUBLE-ACTION INDEXING CAM: First revolution of index cam for precision slicing; second revolution for thicker slicing selection. Indexing cam holds true to setting during slicing operation.

PERMANENTLY MOUNTED RING GUARD: Permanently mounted ring guard with integrated product deflector protects knife during operation and cleaning.

HEAVY GAUGE STAINLESS STEEL KNIFE COVER:

One piece design made of 12 gauge stainless steel, durable to maintain shape and ensure consistent fit. Spring loaded knob for quick removal and replacement.

CLEANING LEG: Cleaning leg supports the slicer in tilted position for cleaning beneath the machine.

REMOVABLE REAR DEFLECTOR: No tools are required for removal of the deflector for thorough cleaning of the slicer.

KNIFE MOTOR: ½ H.P., permanently lubricated ball bearings. Single phase capacitor-start, induction run.

ELECTROLESS NICKEL PLATED SINGLE SLIDE ROD WITH RESERVOIR WICK: Transport slide rod is E-Nickel electroless plated. Slide rod bearings feature an oil reservoir/oil wick.

FINISH: Stainless steel carriage, gauge plate and knife cover. Anodized aluminum base.

ERGONOMIC STYLE HANDLE: Specially designed for ease of use during manual operation.

MEAT GRIP: Front mounted grip is high strength thermoplastic. Swings out of way when not in use.

ELECTRICAL SPECIFICATIONS: 120/60/1 – U L Listed. Also available in 100/50/60/1 and 230/50/1 (2.5 amps) – not submitted for U L Listing.

SWITCH: Moisture protected toggle type, operated by a push-pull rod.

CORD & PLUG: 6-foot, three-wire power supply cord and plug. Plug not furnished on export models.

CAPACITY: The carriage will take food up to 12" in width or 7½" in diameter.

GAUGE PLATE: Gauge plate is a heavy aluminum casting with ribbed laminated stainless steel face for smooth feeding. Adjustable to cut any thickness of slice up to 1".

WARRANTY: All parts and service coverage for one year including knife. Lifetime guarantee on Borazon stones in the sharpening system.

WEIGHTS FOR THE FOLLOWING ITEMS: Tubular Chute 9.1 lbs.; Swing Arm .61 lbs.; Heavy Front Meat Grip 2.76 lbs.; Heavy Handle 2.7 lbs.; Standard Meat Grip 2.34 lbs.

WEIGHT: Shipping 135 lbs., Net 96 lbs.

DETAILS AND DIMENSIONS

WARNING

ELECTRICAL AND GROUNDING CONNECTIONS MUST COMPLY WITH THE APPLICABLE PORTIONS OF THE NATIONAL ELECTRICAL CODE AND/OR OTHER LOCAL ELECTRICAL CODES.

As continued product improvement is a policy of Hobart, specifications are subject to change without notice.

1-1/2 – 2 H.P. DISPOSER MODELS

Heavy-duty disposer designed for continuous operation in restaurants, hotels, hospitals and cafeterias. Food waste including steak bones is quickly and efficiently removed with this labor-saving, self-cleaning, environmentally sound disposer.

SPECIFICATIONS

- **Grind Chamber:** Corrosion Resistant Stainless Steel
- **Mounting:** 3/4" (19.1 mm) rubber mounting above grinding chamber isolates sound and eliminates vibration. Mounting is enclosed in chrome plated covers for sanitation and appearance.
- **Motor:** 1-1/2 – 1 HP Induction Motor, 1725 RPM, totally enclosed to provide protection against outside moisture. Controlled power air flow cools motor for efficiency and longer life. Built-in thermal overload protection.
- **Cutting Elements:** Stationary and rotating shredding elements made from cast nickel chrome alloy for long life and corrosion resistance, designed for reverse action grinding.
- **Main Bearings:** Double-tapered Timken roller bearings provide a shock absorbing cushion.
- **Motor Seals:** Triple lip seal protects motor from water damage. Secondary spring-loaded oil seal provides double protection against water and loss of grease.
- **Finish:** All Stainless Steel and Chrome plated. Paint-free for lasting sanitation.
- **Warranty:** 1 year full warranty from date of installation.
- **A Disposer Package Includes:** 1 Mounting/Bowl Assembly, 1 Electrical Control, 1 Syphon Breaker, 1 Solenoid Valve, and 1 Flow Control Valve. The standard Flow Control Valve will be sent with the unit unless the optional valve is specified.

DISPOSER MOUNTING ASSEMBLIES (choose one)

Bowl Mounts

-  Type A Sink Bowl Assembly: Includes bowl, water nozzle(s), bowl cover, splash baffle
-  Type B Sink Bowl Assembly: Includes bowl, water nozzle(s), silver guard, splash baffle
-  Type C Sink Bowl Assembly: Includes bowl, water nozzle(s), splash baffle

Sink Bowl Assembly Size

- 12" (304.8 mm) with one adjustable water nozzle
- 15" (381.0 mm) with one adjustable water nozzle
- 18" (457.2 mm) with two adjustable water nozzles

Collar Mounts

-  #5 Sink Flange Mounting Assemblies for 3-1/2" – 4" (88.9 mm – 101.6 mm) sink opening (support legs are recommended)
-  #6 Collar Adaptor for welding into trough, provides 6-5/8" (168.3 mm) opening, includes splash baffle
-  #7 Collar Adaptor for welding into sink, provides 6-5/8" (168.3 mm) opening, includes splash baffle and stopper

DIMENSIONS

IMPORTANT: Use dimension chart below for adaptor height in place of InSinkEerator bowl sink height when mounting directly to a sink.

Bowl Sinks	Flange O.D. X	Work Table Hole Y	Flange I.D. Z	Height
12" (304.8 mm)	13-1/2" (342.9 mm)	12-1/4" (311.2 mm)	12" (304.8 mm)	6-1/2" (165.1 mm)
15" (381 mm)	16-1/2" (419.1 mm)	15-1/4" (387.4 mm)	15" (381.0 mm)	6-1/2" (165.1 mm)
18" (457.2 mm)	19-1/2" (495.3 mm)	18-1/4" (463.6 mm)	18" (457.2 mm)	6-1/2" (165.1 mm)
Adaptors	X	Y	Z	Height
No. 5	Fits Standard Sink Opening: 3-1/2" – 4" (88.9 mm – 101.6 mm)			2-3/4" (69.9 mm)
No. 6	7-13/16" (198.4 mm)	6-7/8" (174.6 mm)	6-5/8" (168.3 mm)	1-3/16" (30.7 mm)
No. 7	9-1/8" (231.8 mm)	7-7/8" (200.0 mm)	7-5/8" (193.7 mm)	2-1/16" (52.4 mm)

NOTE:

- Adaptors are available upon request for all competitor sink bowls or cones.
- Please have sink bowl/cone type with the necessary dimensions when ordering adaptors.
- Also available as a short body model. Reduces overall height of disposer by 1" (25.4 mm).

RECOMMENDED INSTALLATION

RECOMMENDED WATER USAGE

DuraPan™ SERIES

ELECTRIC, OPEN OR MODULAR BASE,
30 & 40 GALLON (115 & 150 LITER)

MODELS: SEL-30-TR SEM-30-TR
 SEL-40-TR SEM-40-TR

Cleveland Standard Features

- Leg or Modular Base
- Full 30/40 Gallon (115/150 Liters) Capacity Rating to Bottom of Pouring Lip
- Power Tilt (Hydraulic Hand Tilt Optional)
- Stainless Steel Clad 5/8" Cooking Surface Guaranteed against warpage
- Stainless Steel Coved Cornered Pans with both Gallon and Liter Markings
- Space-Saving Design- No Clearance Required at rear or sides (optional Faucet and Console requires 4 1/2" on one side)
- All Stainless Steel Construction for durability and easy cleaning
- Adjustable, Electronic Thermostat controls temperature from 100°F to 425°F
- High Efficiency Heating System with even heat distribution - 14 kW's for 30 gallon models, 18 kW's for 40 gallon models.
- Fast Heat-Up and Recovery Time-Preheats in 15 minutes, full capacity from cold to boiling in 60 minutes
- Spring Assist Cover with Adjustable Vent and Full Width Handle
- On/Off Switch, Thermostat Knob and Pilots, recessed to avoid breakage
- Four Stainless Steel, Level adjustable feet, rear flanged for bolting
- Serviceable from the front of the unit
- Two Pilot Lights; Green = Power on, Amber = Temperature Cycling
- Splash Proof Controls and Water Tight Electrical Connections
- High Limit Safety Device set at 450°F (232°C)
- Anti-Splash Pouring Lip
- Typical approvals include UL, CSA, CE and NSF

Options & Accessories

- Sliding Drain Drawer with Splash Screen (SLD) (for SEL models only)
- Hydraulic Hand Tilt with quick lowering feature (HTS)
- Power Tilt with Hand Tilt Override (PT1)
- Double or Single Pantry Faucet (SPS14, DPS14), includes Faucet Mounting Bracket
- Double or Single Pantry Skillet Filler with 60" hose (SKF-S or DKF-S)

Open base model shown with optional Drain Drawer (SLD) and Power Tilt (PT1)

Short Form Specifications

Shall be CLEVELAND, Tilting Skillet; Model SE - ____ - TR ____ KW, ____ Volts holding no less than ____ gallons (____ liters); Complete with thermostatic and Safety Controls; Gallon Markings; Stainless Steel Clad; 5/8" Cooking Surface; Power Tilt; Spring Assist Cover with adjustable Vent. All Stainless Steel Construction. No Clearances Required.

- Hot & Cold Water Pre-Rinse Spray Head with Hose (PRS-S)
- Voltage Options:
 - VOSK1, 240 Volt, 60 Hz, 3 Phase
 - VOSK2, 380/415 Volt, 50 Hz, 3 Phase - for export
 - VOSK3, 440/480 Volt, 60 Hz, 3 Phase
- Food Strainers for pouring spout (FS)
- Vegetable Steamers (VS)
- Poaching Pans (PP)
- Wall Mounting (WMS)
- In-Wall Carriers (IWCS)
- Pan Carriers (PCS), not available on 30 gallon models with a Tangent Draw-Off Valve
- 2" Tangent Draw-Off Valve (TD2), left side only

Litho in U.S.A.

**FLOOR TYPE, LEVER TILT
 ELECTRIC KETTLES**

*TILTING, "SPASH PROOF SERIES", SELF-CONTAINED
 23 STEAM JACKETED, 20 GALLONS (80 LITERS)*

MODEL: KET-20-T

Cleveland Standard Features

- Manual tilting, balanced design
- Self-contained, easily installed - needs only an electrical hook-up
- Steam jacket filled with treated water, venting and/or refilling is not required
- Accurate, consistent solid state temperature controls (mechanical thermostat not as accurate) - less than ±1°C variance (ideal for simmering). Operating temperature range from 145° - 260°F (63°C - 127°C)
 Control panel includes:
 - LED indicator for heat cycle
 - LED indicator for low water
 - Power ON/OFF switch
 - Adjustable temperature control dial
- Water resistant controls, splash-proof construction
- Large pouring lip for high capacity and chunky products
- Re-inforced rolled rim design prevents damage to kettle rim, eliminates "bar rim designs"
- Welded-in heating elements, (holds vacuum better, won't leak or loose water)
- Easily cleaned: kettle and all exterior surfaces are of type 304 stainless steel with an #4 finish
- Rear mounted easy access pressure gauge and pressure relief valve to prevent tampering. Color coded easy to read pressure gauge with "green" and "vent air zone"
- 50 psi steam jacket rating for higher cooking temperatures
- 50 psi safety valve
- Solid state water level control (no sight glass gauge to break or leak)
- Splash proof element cover with a double gasket seal
- 6" level adjustable feet
- Standard voltage is 208-240 volts, 60 Hz, 3-phase, 3-wire. Field rewirable for single-phase, 2-wire systems
- Typical approvals include UL., CSA, CE, NSF and ASME

Options & Accessories

- Lift-off Cover (CL20)
- Double pantry faucet with swing spout and mounting bracket (DPK & FBKT)
- Voltage other than standard (VOS)
- Type 316 Stainless Steel Kettle interior for high acid food products (316)
- Food Strainer (FS)
- Basket Strainer (BS-)
- Single pantry faucet with swing spout (SPK)
- High Wattage Operation (HW) (see back page)

Short Form Specifications

Shall be CLEVELAND, Electric, self-contained Kettle, Model KEL-20-T; 20 gallons, tilting, ____ KW, ____ volt, ____ Hz, ____ - phase, 23 jacketed type. Type 304 Stainless Steel kettle and supports. Rated 50 psi with Safety Valve, Permanently filled Steam Jacket, Splash Proof Solid State Temperature (± 1° C) and Safety Control System in plug-in Module including L.E.D. indicators. (Optional Lift-Off Cover)

- Kettle Accessory Kit (KAK)
 - Clean-up Brush (CB)
 - 36" Kettle Whip (KW)
 - Draw-off Brush (DB)
 - Measuring Strip (MS)
 - Kettle Markings (KM)
 - Protective Control Panel (PCE)
- 36" Kettle Paddle (KP)
- 36" Kettle Brush (KB)
- 24 oz. Ladle (KL)

TRI-LEG, ELECTRIC KETTLES

TILTING, "SPASH PROOF SERIES",
 SELF-CONTAINED, 2/3 STEAM JACKETED,
 25, 40 or 60 GALLONS (100, 150 or 225 LITERS)

MODELS: KEL-25-T
 KEL-40-T
 KEL-60-T

Cleveland Standard Features

- Self-contained, easily installed - needs only an electrical hook-up
- Steam jacket filled with treated water, venting and/or refilling is not required
- Accurate, consistent solid state temperature controls (mechanical thermostat not as accurate) - less than $\pm 1^{\circ}\text{C}$ variance (ideal for simmering). Operating temperature range from 145° - 260°F (63°C - 127°C)
 Control panel includes:
 - LED indicator for heat cycle • LED indicator for low water
 - Power ON/OFF switch • Adjustable temperature control dial
- Water resistant controls, splash-proof construction
- Large pouring lip for high capacity and chunky products
- Re-inforced rolled rim design prevents damage to kettle rim, eliminates "bar rim designs"
- Welded-in heating elements, (holds vacuum better, won't leak or loose water)
- Easily cleaned: kettle and all exterior surfaces are of type 304 stainless steel with an #4 finish
- Rear mounted easy access pressure gauge and pressure relief valve to prevent tampering. Color coded easy to read pressure gauge with "green" and "vent air zone"
- 50 psi steam jacket rating for higher cooking temperatures
- 50 psi safety valve
- Solid state water level control (no sight glass gauge to break or leak)
- Splash proof element cover with a double gasket seal
- Tilt mechanism of roller bearings and case hardened self-locking worm and segment gear
- 1 5/8" O.D. tri-leg supports with level adjustable feet for floor bolting
- Standard voltage is 208-240 volts, 60 Hz, 3-phase, 3-wire
- Typical approvals include UL., CSA, CE, NSF and ASME

Options & Accessories

- Spring-assisted, hinged, rotatable, domed Stainless Steel Cover (CHS)
- 2" or 3" diameter Tangent Draw-Off Valve (TD2 or TD3*), *TD3 for 60 gallon only and will raise height of kettle by 5-5/8" (143mm)
- Hot and Cold Water Faucet with Swing Spout and Mounting Bracket (DPK and FBKT)
- Type 316 Stainless Steel Kettle Liner for high acid food products (316)
- Pan Carrier (PCK)
- Flow Diverter (FD)
- Food Strainers (FS)
- Cooking Baskets and Tri-Basket Supports (BS and TBS)
- Kettle Accessory Kit (KAK) includes:
 - Clean-up Brush (CB)
 - 36" Kettle Paddle (KP)
 - 36" Kettle Whip (KW)
 - 36" Kettle Brush
 - Draw-Off Brush (DB)
 - 24 oz. Ladle (KL)
- Automatic Water Meter (GMF or LMF)

Shown with optional spring-assisted cover and 2" tangent draw-off valve

Short Form Specifications

Shall be CLEVELAND, Electric Kettle, Tri-leg mounted, self-contained, tilting, Model KEL - ____ - T; ____ gallons, 2/3 Steam Jacketed. KVE

Capture Jet® Hood with Side-Jet Technology

61

KVE/PC/xxxx11507/EN

The KVE Capture Jet® hood with Side-Jet technology is a highly efficient kitchen ventilation hood that removes contaminated air and excess heat emitted by cooking equipment, helping to provide a comfortable and clean environment.

The KVE hood uses the advanced Halton Capture Jet® with Side-Jet technology to improve the capture and containment of the airflows generated by the cooking equipment. Overall exhaust airflow rates can be reduced up to 30% from those of traditional kitchen hoods.

The Capture Jet® hood with Side-Jet technology is based on the high entrainment efficiency of a compact, high-velocity capture air jet. The capture air jets efficiently induce ambient air at the critical front face area of the hood, minimizing the spillage of the contaminated air and maintaining good air quality in the chef's work area.

- Improved indoor air quality with reduced energy use. Halton Capture Jet® with Side-Jet technology reduces the exhaust airflow rates required and improves the capture and containment efficiency of the hood.
- High efficiency grease filtration using UL and NSF classified Halton KSA multi-cyclone filters for removal of up to 95% of particles with a size of 8 microns per ASTM F2519.
- T.A.B.™ (testing and balancing) ports, which allow accurate and effective commissioning.
- AccuFlow provides a visual indicator that the system is at design exhaust air values at the face of the hood. A pressure transducer measures design exhaust rate and provides a green indicator light.
- Standard LED light fixtures.
- Stainless steel, welded design.

NOTE: Factory must be advised of any special requirements of the Authority Having Jurisdiction at time of quote.

Part	Description
1	18 Ga. Stainless steel
2	Exhaust duct collar
3	Capture Jet air
4	Light fixture
5	KSA grease filters
6	Integrated Capture Jet fan intake
7	Switch panel (optional)
8	Grease collection cup
9	Hanger bracket

Construction

The KVE hood combines Capture Jet® with Side-Jet technology, light fixtures, airflow measurement T.A.B. ports and KSA grease filters. The hood shall bear ETL or UL label. The ETL/UL listed range hood without exhaust fire damper per standard 710 and be fabricated in compliance with NFPA-96, and shall bear the NSF seal of approval.

The exposed parts are manufactured from 18 ga. stainless steel.

The hood ends have double side wall construction. A concealed collection cup is fitted into the grease drain channel for easy removal of the grease and dirt extracted by the KSA multi-cyclone filters.

DIMENSIONS

KVE	inches
Length	48....168
Width	42....84
Height	24....30

QUICK DATA

Length	Recommended Exhaust air volumes	Recommended Capture Jet air volumes
48....168	* Actual exhaust air volumes are calculated by using the heat load based design method utilizing the Halton H.E.L.P. (Hood Engineering Layout Program)	Capture Jet average pressure 0.40" WC (without Side Jet option), 0.20" WC (with Side Jet option).
	*Average operating range from light to to heavy duty cooking loads 135 cfm to 275 cfm per linear foot	*Airflows established by a pressure reading *WC= Water Column

*Hoods are ETL or UL listed for USA per UL710, and CANADA per ULC-S646 standards, and NSF certified.

Function

The kitchen hood above cooking appliances contains the rising warm air and contaminants (1). The capture air jets (2) direct the contaminated air toward the KSA grease filters (3), where grease particles and other impurities are separated from the exhaust air using the cyclone separation principle.

- 10 Double wall construction
- 11 AccuFlow Display

The extracted grease and other air contaminants flow into a drain channel and toward the collection tray/cup (4).

The vertical capture air improves efficiency, and allows the hood to operate at lower exhaust airflows. This is achieved by modifying the capture jet configuration on the front of the hood (5). The side jets allow for enhanced performance at the ends of the hood (6).

Accessories

- Closure Panels - for canopies below ceiling level
- Backsplash
- Side Skirts (optional)
- KFR - Filter Removal Tool
- Recessed fluorescent
- Recessed incandescent
- Incandescent globe type lights
- MEP - Master Electrical Panels
- Face or remote mounted switch panels
- Factory prepiped Fire Protection
- Powder coated
- Listed exhaust duct balancing damper
- Custom/Designer stainless steel exterior textures
- Hood mounted fire cabinet
- M.A.R.V.E.L. Demand Control w/VFD by Halton

Balancing of Capture Jet® Hoods

The capture jet and exhaust air flows are easily and accurately determined by measuring the pressure difference from the T.A.B. ports mounted in each plenum. Corresponding air flows can be read from the diagrams provided.

All T.A.B. readings assume cold conditions. To adjust for an exhaust temperature of 110 °F, multiply the readings by a factor of 0.93.

Exhaust air flow vs. pressure differential

KVE/KVC- 7.5 Filters, 2 Collars

KVE/KVC- 8 Filters, 2 Collars

Suggested specifications

General

Kitchen hood inner liner shall be constructed from 18 gauge stainless steel where exposed. The kitchen hoods shall be supplied complete with outer casing/main body, inner liner, exhaust duct, pressure measurement T.A.B. ports, Outer casing panels shall be constructed of stainless steel with a brushed satin finish. Each joint shall be welded and liquid tight, avoiding harmful dripping of condensation.

All exposed welds are ground and polished to the original finish of metal. Canopy ends shall be double sided wall construction (no single wall hoods permitted).

Exhaust

The exhaust airflow will be based on the convective heat generated by the appliances underneath each hood system. Submittals shall include convective heat calculations based on the input power of the appliance served.

Capture Jet® with Side-Jet Technology

The hood shall be designed with Capture Jet® with Side-Jet technology to reduce the exhaust airflow rate required, and to improve the capture and containment efficiency of the hood, while reducing energy consumption. The Capture Jet® air shall be introduced through a special discharge panel and shall not exceed 10% of the calculated exhaust airflow. The Capture Jet® discharge velocity will be a minimum of 1500 feet per minute. Slot or grille type discharge shall not be used. The Capture Jet® shall be internally mounted with a speed control and will not require a fire damper or electronic shut down in fire mode.

AccuFlow

The Capture Jet hood will come standard with the Halton AccuFlow indicator. The AccuFlow provides a visual indicator that the system is at design exhaust air values. A pressure transducer measures design exhaust rate and this is interpreted by the AccuFlow sensor by a steady green indicator light. Should the system be below design airflow, the indicator light will blink once in sequence. Should the indicator light blink twice in sequence, the exhaust airflow is above design

T.A.B. Ports

The airflows through the extractors and the Capture Jet® air chamber are to be determined through the integral T.A.B. (Testing and Balancing) ports mounted in the hood. The airflows are to be determined by the pressure vs. airflow curves supplied by Halton.

Grease Filters

The hood shall be equipped with KSA multi-cyclone stainless steel grease extractors. The KSA filters shall be NSF and UL classified. The grease extraction efficiency is 93% on particles with a diameter of 5 microns and 98% on particles with a diameter of 15 microns or larger as tested by an independent testing laboratory. The pressure loss over the extractor shall not exceed 0.50" of water at flow rates approved by U.L. for heavy load cooking. Sound levels shall not exceed an NC rating of 55. Baffle or slot type extractors shall not be used.

Light Fixtures

Hood lights shall be U.L. Listed LED fixtures, suitable for grease hoods. 20 Watts per fixture, 50 foot candles at cooking surface. Option: Recessed fluorescent, recessed incandescent or incandescent globe type lighting. The lighting shall be suitable for single phase power supply.

Control Panel

The master electrical panel consisting of one starter per motor with overload protection will be supplied. Control panel to hood or remote mounted.

Fire Suppression System

The kitchen hood fire extinguishing system shall protect the kitchen hood against grease fires by a completely automatic fire control system, which consists of wet chemical. The fire detection system shall be capable of detecting fire in the hood, duct, or surface equipment and shall automatically discharge liquid extinguishing agent into the plenum chamber, exhaust duct collar, and cooking appliance areas to ensure against re-ignition or re-flash. System components shall include a spring-loaded fusible link detector, wall mounted emergency pull stations, wall mounted automan and cabinet, and a mechanical gas valve installed in the gas line serving the cooking equipment. System installation shall be made by an authorized representative of the system manufacturer and conform to U.L. 300 requirements and local codes.

by Tyco Fire Suppression & Building Products

R-102™ RESTAURANT FIRE SUPPRESSION SYSTEMS

Data/Specifications

FEATURES

- Low pH Agent
- Proven Design
- Reliable Gas Cartridge Operation
- Aesthetically Appealing
- UL Listed – Meets Requirements of UL 300
- ULC Listed – Meets Requirements of ULC/ORD-C1254.6
- CE Marked

APPLICATION

The ANSUL® R-102™ Restaurant Fire Suppression System is an automatic, pre-engineered, fire suppression system designed to protect areas associated with ventilating equipment including hoods, ducts, plenums, and filters. The system also protects auxiliary grease extraction equipment and cooking equipment such as fryers; griddles and range tops; upright, natural charcoal, or chain-type broilers; electric, lava rock, mesquite, or gas-radiant char-broilers; and woks.

The system is ideally suitable for use in restaurants, hospitals, nursing homes, hotels, schools, airports, and other similar facilities.

Use of the R-102 system is limited to indoor applications or locations that provide weatherproof protection within tested temperature limitations. The regulated release and tank assemblies must be mounted in an area where the air temperature will not fall below 32 °F (0 °C) or exceed 130 °F (54 °C). The system must be designed and installed within the guidelines of the UL/ULC Listed Design, Installation, Recharge, and Maintenance Manual.

SYSTEM DESCRIPTION

The restaurant fire suppression system is a pre-engineered, wet chemical, cartridge-operated, regulated pressure type with a fixed nozzle agent distribution network. It is listed with Underwriters Laboratories, Inc. (UL/ULC).

004215

The system is capable of automatic detection and actuation as well as remote manual actuation. Additional equipment is available for building fire alarm panel connections, electrical shutdown and/or interface, and mechanical or electrical gas line shut-off applications.

The detection portion of the fire suppression system allows for automatic detection by means of specific temperature-rated alloy type fusible links, which separate when the temperature exceeds the rating of the link, allowing the regulated release to actuate.

004212

A system owner's guide is available containing basic information pertaining to system operation and maintenance. A detailed technical manual, including system description, design, installation, recharge and resetting instructions, and maintenance procedures, is available to qualified individuals.

The system is installed and serviced by authorized distributors that are trained by the manufacturer.

The basic system consists of an ANSUL AUTOMAN® regulated release assembly which includes a regulated release mechanism and a wet chemical storage tank housed within a single enclosure. Nozzles with blow-off caps, detectors, cartridges, agent, fusible links, and pulley elbows are supplied in separate packages in the quantities needed for fire suppression system arrangements.

Additional equipment includes a remote manual pull station(s), mechanical and electrical gas valves, and electrical switches for automatic equipment and gas line shut-off. Accessories can be added such as alarms, warning lights, etc., to installations where required.

Additional tanks and corresponding equipment can be used in multiple arrangements to allow for larger hazard coverage. Each tank is limited to a listed maximum amount of flow numbers.

004213

COMPONENT DESCRIPTION

Wet Chemical Agent – The extinguishing agent is a mixture of organic salts designed for rapid flame knockdown and foam securement of grease related fires. It is available in plastic containers with instructions for wet chemical handling and usage.

Agent Tank – The agent tank is installed in a stainless steel enclosure or wall bracket. The tank is constructed of stainless steel.

Tanks are available in two sizes: 1.5 gallon (5.7 L) and 3.0 gallon (11.4 L). The tanks have a working pressure of 110 psi (7.6 bar), a test pressure of 330 psi (22.8 bar), and a minimum burst pressure of 660 psi (45.5 bar).

The tank includes an adaptor/tube assembly. The adaptor assembly includes a chrome-plated steel adaptor with a 1/4 in. NPT female gas inlet, a 3/8 in. NPT female agent outlet, and a stainless steel agent pick-up tube. The adaptor also contains a bursting disc seal which helps to prevent the siphoning of agent up the pipe during extreme temperature variations.

Regulated Release Mechanism – The regulated release mechanism is a spring-loaded, mechanical/pneumatic type capable of providing the expellant gas supply to one, two, or three agent tanks depending on the capacity of the gas cartridge used. It contains a factory installed regulator deadset at 110 psi (7.6 bar) with an external relief of approximately 180 psi (12.4 bar). It has automatic actuation capabilities by a fusible link detection system and remote manual actuation by a mechanical pull station.

The regulated release mechanism contains a release assembly, regulator, expellant gas hose, and agent storage tank housed in a stainless steel enclosure with cover. The enclosure contains knock-outs for 1/2 in. conduit. The cover contains an opening for a visual status indicator.

It is compatible with mechanical gas shut-off devices; or, when equipped with a field or factory-installed switch and manual reset relay, it is compatible with electric gas line or appliance shut-off devices.

Regulated Actuator Assembly – When more than two agent tanks (or three 3.0 gallon (11.4 L) tanks in certain applications) are required, the regulated actuator is available to provide expellant gas for additional tanks. It is connected to the cartridge receiver outlet of the regulated release mechanism providing simultaneous agent discharge. It contains a regulated actuator deadset at 110 psi (7.6 bar) with an external relief of approximately 180 psi (12.4 bar). It has automatic actuation capabilities using pressure from the regulated release mechanism cartridge.

The regulated actuator assembly contains an actuator, regulator, expellant gas hose, and agent tank housed in a stainless steel enclosure with cover. The enclosure contains knockouts to permit installation of the expellant gas line.

Discharge Nozzles – Each discharge nozzle is tested and listed with the R-102 system for a specific application. Nozzle tips are stamped with the flow number designation (1/2, 1, 2, or 3). Each nozzle must have a metal or rubber blow-off cap to keep the nozzle tip orifice free of cooking grease build-up.

Agent Distribution Hose – Kitchen appliances manufactured with or resting on casters (wheels/rollers) may include an agent distribution hose as a component of the suppression system. This allows the appliance to be moved for cleaning purposes without disconnecting the appliance fire suppression protection. The hose assembly includes a restraining cable kit to limit the appliance movement within the range (length) of the flexible hose.

Flexible Conduit – Flexible conduit allows for quicker installations and the convenience of being able to route the cable over, under and around obstacles. Flexible conduit can be used as a substitute for standard EMT conduit or can be used with EMT conduit.

Flexible conduit can be used only with the Molded Remote Manual Pull Station.

Pull Station Assembly – The remote manual pull station is made out of a molded red composite material. The red color makes the pull station more readily identifiable as the manual means for fire suppression system operation.

The pull station is compatible with the ANSUL Flexible Conduit.

APPROVALS

- UL/ULC Listed
- CE Marked
- New York City Department of Buildings
- LPCB
- TFR1
- Marine Equipment Directive (MED)
- DNV
- ABS
- Lloyd's Register
- Meets requirements of NFPA 96 (Standard for the Installation of Equipment for the Removal of Smoke and Grease-Laden Vapors from Commercial Cooking Equipment)
- Meets requirements of NFPA 17A (Standard on Wet Chemical Extinguishing Systems)

ORDERING INFORMATION

Order all system components through your local authorized ANSUL Distributor.

SPECIFICATIONS

An ANSUL R-102 Fire Suppression System shall be furnished. The system shall be capable of protecting all hazard areas associated with cooking equipment.

1.0 GENERAL

1.1 References

- 1.1.1 Underwriters Laboratories, Inc. (UL)
 - 1.1.1.1 UL Standard 1254
 - 1.1.1.2 UL Standard 300
- 1.1.2 Underwriters Laboratories of Canada (ULC)
 - 1.1.2.1 ULC/ORD-C 1254.6
- 1.1.3 National Fire Protection Association (NFPA)
 - 1.1.3.1 NFPA 96
 - 1.1.3.2 NFPA 17A

1.2 Submittals

- 1.2.1 Submit two sets of manufacturer's data sheets
- 1.2.2 Submit two sets of piping design drawings

1.3 System Description

- 1.3.1 The system shall be an automatic fire suppression system using a wet chemical agent for cooking grease related fires.
- 1.3.2 The system shall be capable of suppressing fires in the areas associated with ventilating equipment including hoods, ducts, plenums, and filters as well as auxiliary grease extraction equipment. The system shall also be capable of suppressing fires in areas associated with cooking equipment, such as fryers; griddles and range tops; upright, natural charcoal, or chain-type broilers; electric, lava rock, mesquite or gas-radiant char-broilers; and woks.
- 1.3.3 The system shall be the pre-engineered type having minimum and maximum guidelines established by the manufacturer and listed by Underwriters Laboratories (UL/ULC).
- 1.3.4 The system shall be installed and serviced by personnel trained by the manufacturer.
- 1.3.5 The system shall be capable of protecting cooking appliances by utilizing either dedicated appliance protection and/or overlapping appliance protection.

1.4 Quality Control

- 1.4.1 Manufacturer: The R-102 Restaurant Fire Suppression System shall be manufactured by a company with at least forty years experience in the design and manufacture of pre-engineered fire suppression systems. The manufacturer shall be ISO 9001 registered.
- 1.4.2 Certificates: The wet agent shall be a specially formulated, aqueous solution of organic salts with a pH range between 7.7 – 8.7, designed for flame knock-down and foam securement of grease-related fires.

1.5 Warranty, Disclaimer, and Limitations

- 1.5.1 The pre-engineered restaurant fire suppression system components shall be warranted for five years from date of delivery against defects in workmanship and material.

1.6 Delivery

- 1.6.1 Packaging: All system components shall be securely packaged to provide protection during shipment.

1.7 Environmental Conditions

- 1.7.1 The R-102 system shall be capable of operating within a temperature range of 32 °F to 130 °F (0 °C to 54 °C).

2.0 PRODUCT

2.1 Manufacturer

- 2.1.1 Tyco Fire Suppression & Building Products, One Stanton Street, Marinette, Wisconsin 54143-2542, Telephone (715) 735-7411.

2.2 Components

- 2.2.1 The basic system shall consist of an ANSUL AUTOMAN regulated release assembly which includes a regulated release mechanism and a wet chemical storage tank housed within a single enclosure. Nozzles, blow-off caps, detectors, cartridges, agent, fusible links, and pulley elbows shall be supplied in separate packages in the quantities needed for fire suppression system arrangements. Additional equipment shall include remote manual pull station, mechanical and electrical gas valves, and electrical switches for automatic equipment and gas line shut-off, and building fire alarm control panel interface.
- 2.2.2 Wet Chemical Agent: The extinguishing agent shall be a specially formulated, aqueous solution of organic salts with a pH range between 7.7 – 8.7, designed for flame knockdown and foam securement of grease related fires.
- 2.2.3 Agent Tank: The agent tank shall be installed in a stainless steel enclosure or wall bracket. The tank shall be constructed of stainless steel. Tanks shall be available in two sizes; 1.5 gallon (5.7 L) and 3.0 gallon (11.4 L). The tank shall have a working pressure of 110 psi (7.6 bar), a test pressure of 330 psi (22.8 bar), and a minimum burst pressure of 660 psi (45.5 bar). The tank shall include an adaptor/tube assembly containing a burst disc union.
- 2.2.4 Regulated Release Mechanism: The regulated release mechanism shall be a spring-loaded, mechanical/pneumatic type capable of providing the expellant gas supply to one or two agent tanks depending on the capacity of the gas cartridge used or three 3.0 gallon (11.4 L) agent storage tanks in certain applications. It shall contain a factory installed regulator deadset at 110 psi (7.6 bar) with an external relief of approximately 180 psi (12.4 bar).
It shall have the following actuation capabilities: automatic actuation by a fusible link detection system and remote manual actuation by a mechanical pull station.
The regulated release mechanism shall contain a release assembly, regulator, expellant gas hose, and agent storage tank housed in a stainless steel enclosure with cover. The enclosure shall contain knock-outs for 1/2 in. conduit. The cover shall contain an opening for a visual status indicator.
It shall be compatible with mechanical gas shut-off devices; or, when equipped with a field or factory-installed switch(es), it shall be compatible with electric gas line or appliance shut-off devices, or connections to a building fire alarm control panel.
- 2.2.5 Regulated Actuator Assembly: When more than two agent tanks or three agent tanks in certain applications are required, the regulated actuator shall be available to provide expellant gas for additional tanks. It shall be connected to the cartridge receiver outlet of the regulated release mechanism providing simultaneous agent discharge. The regulator shall be deadset at 110 psi (7.6 bar) with an external relief of approximately 180 psi (12.4 bar). The regulated actuator assembly shall contain an actuator, regulator, expellant gas hose, and agent tank housed in a stainless steel enclosure with cover. The enclosure shall contain knockouts to permit installation of the expellant gas line.
- 2.2.6 Discharge Nozzles: Each discharge nozzle shall be tested and listed with the R-102 system for a specific application. Nozzles tips shall be stamped with the flow number designation (1/2, 1, 2, or 3). Each nozzle shall have a metal or rubber blow-off cap to keep the nozzle tip orifice free of cooking grease build-up.

SPECIFICATIONS

2.0 PRODUCT (Continued)

2.2 Components (Continued)

- 2.2.7 Distribution Piping: Distribution piping shall be Schedule 40 black iron, chrome-plated, or stainless steel conforming to ASTM A120, A53, or A106.
- 2.2.8 Detectors: The detectors shall be the fusible link style designed to separate at a specific temperature.
- 2.2.9 Cartridges: The cartridge shall be a sealed steel pressure vessel containing either carbon dioxide or nitrogen gas. The cartridge seal shall be designed to be punctured by the releasing device supplying the required pressure to expel wet chemical agent from the storage tank.
- 2.2.10 Agent Distribution Hose: An optional agent distribution hose shall be available for kitchen appliances manufactured with or resting on casters (wheels/rollers). This shall allow the appliance to be moved for cleaning purposes without disconnecting the appliance fire suppression protection. Hose assembly shall include a restraining cable kit to limit the appliance movement within the range (length) of the flexible hose.
- 2.2.11 Flexible Conduit: The manufacturer supplying the Restaurant Fire Suppression System shall offer flexible conduit as an option to rigid EMT conduit for the installation of pull stations and/or mechanical gas valves. The flexible conduit shall be UL Listed and include all approved components for proper installation.
- 2.2.12 Pull Station Assembly: The Fire Suppression System shall include a remote pull station for manual system actuation. The pull station shall be designed to include a built-in guard to protect the pull handle. The pull station shall also be designed with a pull handle to allow for three finger operation and shall be red in color for quick visibility.

3.0 IMPLEMENTATION

3.1 Installation

- 3.1.1 The R-102 fire suppression system shall be designed, installed, inspected, maintained, and recharged in accordance with the manufacturer's listed instruction manual.

3.2 Training

- 3.2.1 Training shall be conducted by representatives of the manufacturer.

Master Series Heavy Duty Open Burner Top Range

Item: 66

Quantity: _____

Project: _____

Approval: _____

Date: _____

Master Series Heavy Duty Open Burner Top Range

Models:

- M43R M43S M43T

Range With Six Open Star Burners

Model M43R

Standard Features:

- Stainless steel front and sides
- 6" (152mm) chrome steel adj. legs
- 7-1/2" (191mm) stainless steel front rail
- Six (6) 24,000 BTU, (7 kW) natural, 20,000 BTU (5.86kW) propane Starfire burners
- Removable ring grate bowl over each burner
- Cast iron top grates
- One-piece Stainless Steel drip tray
- Piezo spark ignition for oven
- Fully porcelainized oven interior
- 40,000 BTU, (11.72 kW) natural gas, 35,000 BTU (10.75kW) propane gas cast iron oven burner
- Storage base interior of aluminized steel

Optional Features:

- Stainless steel common front rail up to 102" (2591mm) wide (two or more units in a battery)
- Stainless steel main back
- Stainless steel oven interior

- Convection oven base, add C to Model No., e.g. M43RC
- Additional oven rack
- Rear gas connection; 3/4", 1", or 1-1/4" NPT
- Gas regulator 3/4" or 1-1/4"
- Gas shut off valve; 3/4", 1" or 1-1/4" NPT
- Gas flex hose & quick disconnect (3/4", 1" or 1-1/4" NPT x 5') w/restraining device, please specify
- End caps and cover, NC, specify
- Set of (4) Polyurethane non-marking swivel casters w/front brakes
- 6" (152mm) stainless steel adj. legs
- Storage base shelf of aluminized or stainless steel
- Stainless steel tubular high shelf, single or double deck
- Stainless steel backguard: 10" (354mm), 17" (432mm) or 33" (838mm)
- 230 volt, 50 cycle components, RC motor (export)
- Celsius dial for oven thermostat, NC

Specifications:

Heavy-duty gas range with oven, with six (6) 24,000 BTU, (7 kW), Starfire burners. Heavy-duty cast iron top grates/ring grates. 34" (864mm) wide x 38" (965mm) deep, including 7-1/2" (191mm) deep stainless steel front rail. Porcelain enamel oven interior with 40,000 BTU, (11.72 kW), cast iron burner. Stainless steel front and sides. Natural or propane gas. Also available with storage base with doors, suffix S, and modular top, suffix T.

NOTE: Ranges supplied with casters must be installed with an approved restraining device.

Master Series Spreader Plates & Cabinets

Models:

- M12ES
- M17ES
- M24ES
- M12SP
- M17SP
- M24SP
- M24SPT

Model M17ES

Standard Features:

- Stainless steel front and sides
- 7-1/2" (191mm) stainless steel front rail
- Stainless steel top plate
- 1-1/4" NPT manifold joins adjacent equipment
- Cabinet storage base interior of aluminized steel

Optional Features:

- Stainless steel back
- Stainless steel common front rail up to 68" (1728mm) wide (two or more units in a battery)
- Stainless steel tubular high shelf, single or double deck
- Stainless steel backguard: 10" (354mm), 17" (432mm) or 33" (838mm) High

- Stainless steel sink
- 1 1/4" and 2" NPT rear gas connection for 12" (308mm), 17" (432mm), and 24" (610mm) spreaders.
- Swivel casters (4) w/front brakes, (cabinets only)
- Polyurethane non-marking swivel casters (4) w/front brakes (cabinets only)
- 6" (152mm) stainless steel adjustable legs (cabinets only)
- Storage base shelf of aluminized or stainless steel in 17" (432mm) and 24" (610mm) cabinets.

Specifications:

Spreader plates provide additional work space between ranges or at the end of a battery. A 1-1/4" NPT manifold joins adjacent equipment for a continuous battery design, protected by a stainless steel manifold cover. Standard widths are 12" (610mm), 17" (432mm) and 24" (610mm), (Special sizes are available.) Spreader plate is available as modular (24") or cabinet base. Front enclosures are available as stainless steel and completely removable pieces as special. Available in standard widths listed above, as well as special sizes. Cabinets have stainless steel doors and sides on 17" (432mm) and 24" (610mm).

Typical Model Number

Model Number Suffixes:

SP = Spreader Plate only. Available in 12" (308mm), 17" (432mm) and 24" (610mm). and 34" (864mm) widths *

ES = Full Spreader Cabinet. Available in 12" (308mm), with door on 17" (432mm) and 24" (610mm).*

SPT = 24" (610mm) Spreader Plate - "Modular" to match other modular top sections and for use with refrigerated bases.

* Special widths available upon request (additional charge).

THIS IS REPRESENTATIVE OF WHAT YOU SEE FROM THE FRONT

THIS IS REPRESENTATIVE OF WHAT YOU SEE FROM THE SIDE

Standard Features:

- Plancha griddle plate is a 1" (25mm) thick steel griddle plate with side & rear 1"(25mm) wide side perimeter troughs with a 5" (127mm) front trough.
- 2-5/16" (591mm) high welded steel splash guard sides and back
- Stainless steel front and sides
- 6" (152mm) chrome steel adj. legs
- 7-1/2" (191mm) stainless steel front rail
- Clip-on stainless steel backsplash
- Removable front-mounted stainless steel grease receptacle
- Hi-Lo valve control for each griddle burner
- Three "H" griddle burners 99,000 BTU (29 kW) total
- Piezo spark ignition for oven
- Fully porcelainized oven interior
- Storage base interior of aluminized steel w/shelf, (Suffix S)
- Modular top section, (Suffix T)
- 40,000 BTU (11.72kW) natural gas, 35,000 (10.25 kW) propane gas cast iron oven burner

Optional Features:

- Stainless steel common front rail up to 68" (1728mm) wide (two or more units in a battery)

- Stainless steel main back
- Fully grooved griddle (or grooved sections)
- Stainless steel oven interior
- Convection oven base, add C to Model No., e.g. M47RC
- Additional oven rack
- Rear gas connection, 3/4" or 1" NPT
- Gas regulator 3/4" or 1-1/4"
- Gas shut off valve; 3/4", 1" or 1-1/4" NPT
- Gas flex hose & quick disconnect (3/4", 1" or 1-1/4" NPT x 5") w/restraining device, please specify
- End caps and cover, (NC) - specify
- Swivel casters (4) w/front brakes
- Polyurethane non-marking swivel casters (4) w/front brakes
- 6" (152mm) stainless steel adj. legs
- Dais base (not for use with "RC" oven)
- Storage base shelf of aluminized or stainless steel
- Stainless steel tubular high shelf, single or double deck
- Stainless steel backguard: 10" (354mm), 17" (432mm) or 33" (838mm)
- 230 volt, 50 cycle components, RC motor (export)
- Celsius dial for oven thermostat, NC

Specifications:

Heavy-duty gas range with oven, Model M47R. One 34" (864mm) wide, valve-controlled plancha style perimeter trough griddle plate. 1" (25mm) thick, 99,000 BTU (29 kW) total. 34" (864mm) wide x 38" (965mm) deep, including 7-1/2" (191mm) deep stainless steel front rail. Porcelain enamel oven interior measuring 26-1/4" (667mm) wide x 13-1/2" (343mm) high x 29" (737mm) deep. 40,000 BTU (11.72 kW) cast iron burner. Stainless steel front and sides. 139,000 BTU (40.73 kW) total. Natural or propane gas. Also Available with storage base(s) w/doors, suffix S, and Modular top, suffix T.

NOTE: Ranges supplied with casters must be installed with an approved restraining device.

MODEL: 21-CET-16

Cleveland Standard Features

- Cooking Capacity for up to five 12" x 20" x 2½" deep Cafeteria Pans.
- **Innovative PowerPak Electric Steam Generator:** Two Special Stainless Steel Fire Bar Heating Element. Strong 14 Gauge Stainless Steel Construction. Large 5 gallon generator reservoir for faster steam cooking production. Fully insulated rear mounted steam generator.
- **Easy Access Cleaning Port:** Generator Cleaning Port located on the outside, top of the unit. Not necessary to remove hot panels or pan rack guides.
- **Instant Steam Stand By Mode:** Hold generator at a steaming temperature. Allows unit to start cooking instantly.
- **Durable 14 Gauge, Stainless Steel Construction:** For compartment door, cavity and steam generator.
- **One 60 Minute Electro-Mechanical Timer and Switch for manual operation:** Audible signal for cooking time completion.
- **Main Power On/Off Switch:** With Automatic Water Fill.
- **Exclusive Steam Cooking Distribution System:** Maintenance Free Exclusive Brass Steam Jets produce a high velocity convection steam without fans. Coved Corner design in cooking compartment distributes heat evenly, and is easy to keep clean. Creased top & bottom enhance drainage. Cold water condenser behind drain maintains a dry steam. Fully Insulated cooking compartment for thermal efficiency. Removable Stainless Steel Slide Racks for easy cleaning.
- **Automatic Generator Drain:** Contains a "Water Jet" Spray Rinse Drain Cleaning Cycle to keep drain clear.
- **Exclusive Automatic Remote Probe Type Water Level Control:** Separate from the generator for easy access.
- **Exclusive "Cool to the Touch" Two-Piece Compartment Door Design:** Free floating inner door with reversible gasket provides an air tight seal. Stainless Steel Slam/Latch Door Latch mechanism for reliability.
- **Left Hand Door Hinging:** Compartment Doors hinged on the left, controls on the right.
- Available in most voltages, three phase only.

Options & Accessories

- Right hand Door Hinging, Controls on the Left (DHR)
- Electronic Timer with Compensating Load Feature (ETC)
- ON/OFF Steam Switch for compartment controls (MC)

Shown with optional Electronic Timer

Short Form Specifications

Shall be CLEVELAND, SteamCraft® Ultra 5, one compartment, Counter-Type Steamer, Model 21-CET-16, ___volts, 16.5 KW, ___Hz, 3 phase, heavy duty all Stainless Steel construction; rear mounted, insulated Steam Generator with Remote Probe Type Water Level Controls and Automatic Steam Generator Blowdown with "Water Jet" Drain Cleaning feature.

- 34" (864mm) High Stainless Steel Economy Stand, for one 21-CET-16 (UniStand34)
- POSK Pull-Out Shelf Kit for UniStand (P/N 111724)
- URK Pan Rack Kit UniStand (P/N 111726)
- 4" Stainless Steel Legs (LF4)
- Equipment Stacking Stand Shelf Type (ES2446)
- Dissolve® Descale Solution, 6 one gallon container w/quarter markings (106174)
- Compartment Door Steam Shut Off Switch (SCS)
- Cafeteria Pans in depths of 1", 2½" and 4"
- Water Filters

- Compartment has capacity for:
Five, 12" x 20" x 2½" deep Cafeteria Pans.

TOP VIEW

WATER QUALITY REQUIREMENT

The recommended minimum water quality standards whether untreated or pre-treated, based upon 10 hours of use per day, and a Daily Blowdown, are as follows:

TOTAL DISSOLVED SOLIDS	less than 60 parts per million
TOTAL ALKALINITY	less than 20 parts per million
SILICA	less than 13 parts per million
pH FACTOR	greater than 7.5
CHLORINE	less than 30 parts per million

Consult a local water treatment specialist for an on site water analysis for recommendations concerning steam generator feed water treatment (if required), in order to remove or reduce harmful concentrations of minerals. The use of highly mineralized water will mean that more frequent servicing of the steam generator will be necessary. The fact that a water supply is potable is not proof that it will be suitable for the generator.

NOTES:

Cleveland Range reserves right of design improvement or modification, as warranted.
Many regional, state and local codes exist and it is the responsibility of the owner and installer to comply with the codes.
Cleveland Range equipment is built to comply with applicable standards for manufacturers. Included among those approval agencies are UL, ULC, UL/NSF#4, CE and CSA.

1000 Watt* Commercial Microwave Oven

Technical Specifications

Power source: 120V, 60Hz, Single phase

Receptacle required: NEMA 5-15 R or NEMA 5-20 R

Frequency: 2,450MHz

Required power: 13.4A

Output: 1000 watts*

Outer dimensions: 20 1/8" w x 16 1/2" d x 12" h

Cavity dimensions: 13" w x 13" d x 8 1/8" h

Net weight: 34 lbs.

Shipping weight: 39 lbs.

Shipping box size: 24" w x 18 3/4" d x 14 3/4" h, 3.8 cu. ft.

Timer: 99 Minutes, 99 Seconds

Memory Capability: 20 Programs

To specify a Panasonic Commercial Microwave Oven

The NE-1064 Commercial Microwave Oven meets or exceeds all safety performance and sanitation standards set for commercial food service microwave ovens by UL, DHHS, FCC and NSF.

Plus, oven shall have output power 1000 Watts*, stainless steel cabinet and cavity, bottom energy feed, 10 programmable memory pads, Braille keypad, 20-memory capability, double quantity key, 6 power levels, 2- and 3-stage cooking, programmable lock, unique "quick pick" preset times and self-diagnostics, Chef/Test Kitchen technical support and 3 year limited warranty.

**I.E.C. 60705 Test Procedure. Specifications subject to change without notice.*

Security/Anti-Theft Option

Receptacle Required

ADA Compliance

§4.28.2 ((CFR) – 28CFR Part 36) "For Alarms".

Etlund Electric Can Openers

For foodservice operations that open up to 75 cans per day, Etlund Electric Can Openers are a smart choice. These time-tested, commercial openers offer ultimate convenience while providing a choice of countertop or portable models.

74

- Effortless electric operation
- Spring-loaded mechanism opens even dented cans
- Available in single speed, or two speed models for multiple can sizes
- Replaceable knife and gear provide long life
- Opens most shapes and sizes
- Compact design allows for easy storage when not in use
- Sleek stainless steel construction provides durable operation and cleans easily
- Model 201 features high impact lexan plastic housing
- Made in U.S.A.

Our countertop and portable electric openers put a handle on can opening convenience.

Model 203
2 speed can opener

Model 201
"Take the can opener to the cans"

Model 266
Single speed can opener

FEATURES:

- Countertop or portable convenience
- Effortless electric operation
- Opens most can shapes/sizes
- Durable stainless steel construction
- Model 201 features high impact lexan plastic housing
- Replaceable knife and gear
- Spring-loaded mechanism opens even dented cans
- Compact design allows for easy storage when not in use
- Available in 115 or 230 volt
- Made in U.S.A.
- UL listed

MOBILE HUMI-TEMP PAN SERVERS

Humidified Holding System for 12" x 20" and Gastro-Norm 1/1 Pans

"PS-1220 SERIES"

PS-1220-8

PS-1220-45

PS-1220-15

FWE's built-in "Humi-Temp" system keeps pans of bulk foods "kitchen-fresh", hot and moist!

FWE's PS-Series "Humi-Temp" cabinets accommodate shallow and deep 12" x 20" and GN 1/1 pans. FWE's unique pan slide racks are one piece die stamped stainless steel, providing greater hygiene and strength. The front edges are relieved for easy loading and the pair of racks are removable for easy cleaning.

FWE's patented "Humi-Temp" Heat / Humidity System eliminates hot and cold spots by gently circulating hot, moist air throughout the interior of the cabinet. Humidity can be added to preserve the moisture content of the food keeping the food fresh and hot for hours.

The heat system is built into the cabinet to reduce maintenance and cleaning costs. Clean up is effortless. The controls are upfront and eye-level and feature a full range thermostat adjustable to actual temperature so they are easy to see and operate. Our cabinets are built tough using stainless steel throughout. Welded construction and our exclusive tubular stainless steel base frame ensure that our cabinets will withstand the most demanding use. And when it comes to selection, no one offers more than FWE. We offer sizes and capacities to fit any operation. Make your choice FWE . . . the "Choice of the Professionals"

- ◇ "Humi-Temp" built-in heat system
- ◇ Removable humidity reservoir
- ◇ Full range thermostat adjustable to actual temperature
- ◇ Recessed eye-level controls
- ◇ All stainless steel
- ◇ All welded construction - no rivets
- ◇ Tubular stainless steel welded base frame
- ◇ Full extension bumper
- ◇ Heavy-duty polyurethane casters
- ◇ Heavy-duty hinges
- ◇ Positive close door latch
- ◇ Heavy-duty push bars
- ◇ Hi-temp door gasket
- ◇ Fully insulated throughout
- ◇ Stainless steel pan slides
- ◇ Two year limited warranty

CONSTRUCTION. Heliarc welded, single unit construction of stainless steel; 20-gauge polished exterior, 22-gauge stainless steel interior with easy-to-clean covered corners. Welded tubular base frame shall be 1" square, heavy gauge stainless steel tubing, with 10-gauge stainless steel reinforcing plates at corners.

INSULATION. "Ultra-Guard" UG-26 high density fiberglass insulation throughout; top, back, bottom, sides, and door(s).

PUSH BAR HANDLES. Heavy-duty, solid formed 1" x .375" thick, mounted at each end of unit. Mountings reinforced with stainless steel channel.

BUMPER. Solid 1.5" wide continuous wraparound aluminum channel, bolted to frame, with snap-in, non-marking replaceable vinyl cushion. Full perimeter bumper extends beyond doors, handles, etc., for added protection. Shall be continuous, with corner cut-outs to facilitate cleaning.

DOORS AND LATCHES. Flush mounted, stainless steel insulated doors. High temperature gasket sealed; gasket shall be cabinet mounted. Each door shall have two (2) heavy-duty edgemount die cast hinges. Door latch shall be edgemounted, full grip, and positive closing. The hinge and latch mountings are reinforced with stainless steel backing plates.

CASTERS. Maintenance free polyurethane tire casters in a configuration of two (2) rigid and two (2) swivel with brake. Casters shall have a reinforced yoke mounted to 10-gauge caster plate. The caster mounting plate shall be secured to a 10-gauge stainless steel reinforcing stress plate via welded in place stainless steel studs. The reinforcing stress plates shall be welded to the heavy gauge tubular frame of the unit.

PAN SLIDES. Stainless steel racks shall be one piece die stamped channel-type pan slides at 2.625" (66.7 mm) spacings to accommodate either deep or shallow 12" x 20" or GN 1/1 pans (at varying capacities - see chart). Racks are removable without tools for cleaning. Racks shall lift off heavy-duty stainless steel supports.

HEATING SYSTEM / CONTROLS. Patented built-in "Humi-Temp" system shall include an Incoloy nickel-chromium alloy heating element and Hi-Temp, self-lubricated, impedance protected fan-cooled blower motor. Cabinet shall have humidifying chamber and drawer style baffled humidifier pan. Both shall be stainless steel and removable. Controls shall be up-front, recessed and shall include a full range thermostat adjustable to actual temperature. Thermostat shall include temperature scale marked in ten degree increments (F/C) from 90° to 190°F (30° to 90°C). An operational range thermometer, power supply light, thermostat cycling light, and 20 amp ON/OFF switch are also included.

ELECTRICAL CHARACTERISTICS. 3 wire grounded 10 foot extension power cord and plug, side mounted for safety. See electrical data chart above for amperage and receptacle configuration. Dedicated circuit.

FWE Products are used by major companies world-wide. We can modify, design, or custom build equipment to fit your special requirements.

Optional Accessories:

- Electronic controls
- Digital thermometer
- 1500 or 2000 watt element
- 220 volt, 50/60 Hz, single phase
- CE compliant
- Heat retention battery
- "Convert-a-Unit" for canned fuel use
- MODELS: PS-1220-8 PS-1220-10 PS-1220-15 PS-1220-6-6
- Dutch doors †
- See-thru lexan door
- Key locking door latch
- Magnetic latch
- Paddle latch
- Padlocking transport latch
- Left hand door hinging
- Security packages
- All swivel or larger casters
- Door edge trim
- Cold plate cartridge
- Floorlock (requires 6" casters)
- Custom pan slide spacings

METROMAX Q™ SHELVING

with *Microban Antimicrobial Product Protection

Part of the innovative MetroMax iQ™ Storage System, MetroMax Q™ is a longer life storage solution than conventional wire shelving. The product offers durable polymer mats that remove for easy cleaning and protect stored items from damage. Quick adjust shelves and MetroMax iQ accessories provides a very efficient use of storage space. MetroMax Q™ is integrated with online space planning tools and tutorials. www.metro.com/iQ

- Longer-life performance:** Durable, corrosion proof polymer mats protect the shelves from normal wear and tear. Robust epoxy coated steel frames and posts hold as much weight as Metro's wire shelving. Weight capacity for evenly distributed loads:
 800 lbs. (363kg) per shelf for lengths of 24" to 48" (610 to 1220mm)
 600 lbs. (275kg) per shelf for lengths of 54" (1370mm) or longer
 2,000 lbs. (907kg) maximum per stationary unit.
- Interchangeable:** MetroMax Q and MetroMax i™ shelves, posts, and most accessories are compatible on the same unit. Use MetroMax Q shelves with MetroMax i™ polymer posts for increased corrosion protection. Use MetroMax i™ solid shelves when spill containment is required or as a bottom shelf to protect supplies from dirt or backsplashes from mops.
- Easier to clean and maintain:** Polymer mats can be easily removed and cleaned in a sink or dish machine. Microban antimicrobial product protection is built into the high contact areas of the shelf including the mats, frames, and posts to protect the product from bacteria, mold, mildew, and fungus that cause odors and product degradation. Microban protection keeps the product "cleaner between cleanings".
- Quick to Adjust:** Patented corner release allows shelves to be unlocked without tools. Simply flip each corner release, relocate the wedge connectors on the posts, and reposition the shelf. Quickly adjust shelves to reclaim wasted vertical space.
- Smooth, Protective Surfaces:** Smooth shelf mats protect packaged items from unwanted rips, tears, or damage.
- Open Grid and Solid Mat Options:** MetroMax Q is available with open grid mats as standard. Open grid shelves promote air circulation and light penetration.
 MetroMax i™ solid shelves can be used with MetroMax Q grid shelves on the same unit and are available in 18" and 24" (457 and 610mm) depths. For 21" (530mm) deep MetroMax Q, solid mat overlays are available.
- Efficient, Organized Storage:** Premium MetroMax iQ™ accessories efficiently organize, contain, and compartmentalize **all** space between shelves.
- Quick to Assemble:** MetroMax Q assembles easily in minutes, without tools. Shelves can be adjusted at 1" (25mm) increments along the post. Shelf wedges have a window to locate your desired position.

MetroMax Q Mobile Unit

MetroMax Q™ Polymer and Steel Shelving

9.21

Specifications

- **Shelf frames and posts:** Steel with electroplated substrate and highly durable, abrasion-resistant epoxy finish. Epoxy finish has built-in Microban antimicrobial product protection. The adjustable foot is reinforced nylon.
- **Shelf Mats:** Injection molded polypropylene with exclusive built-in Microban® antimicrobial product protection.
- **Shelf Wedge Connector:** Reinforced nylon.
- **Temperature range:** -20°F (-29°C) to 125°F (52°C) continuous use, with intermittent exposure to 200°F (93°C) for cleaning.

Standard Interchangeable Shelves

- Part number includes shelf with removable mats and one bag of wedges.
- MetroMax Q grid shelves, MetroMax i™ grid and solid shelves are all compatible on the same unit.

METROMAX Q™ POLYMER AND STEEL SHELVING

Standard Interchangeable Posts

- MetroMax Q: Epoxy coated steel with Microban antimicrobial product protection.
- MetroMax i: Polymer with Microban antimicrobial product protection.
- Stationary posts include an adjustable leveling foot to compensate for uneven floors. Leveling foot can be adjusted 1" (25mm).
- When mounting a shelving unit to a dolly base, stationary posts are used.
- Special height cut posts are available. Consult your Metro representative.

Replacement Post Cap for Polymer Post:
Model No. RPMXS-POSTCAP

Replacement MetroMax Q Wedges
Model No. MQ9985 Bag of 4

NOTE: Compatibility with existing Metro polymer mat shelving systems

- MQ9985 wedges are compatible with original MetroMax Q shelves and posts.
- The post centers on MetroMax Q have been changed to allow interchangeability with MetroMax i™ shelves. MetroMax Q shelves manufactured within or after April 2009 are not compatible with Q shelves made prior to April 2009.
- MetroMax Q is not compatible with original MetroMax manufactured prior to April 2009.
- Posts listed in above table (ex. MQ74PE, MX74PE) can be used with original MetroMax Q shelves made prior to April 2009.

Post Clamp

Adds stability by joining posts of two separate units together. With it, each unit is supported by four posts and buttressed by the adjacent unit.

Model No. 9994X

Foot Plate

Use to add stability to the shelving unit or to bolt units to the floor.

Model No. Zinc 9993Z

Model No. Stainless Steel 9993S

Stem Casters

A variety of stem casters are offered for MetroMax i™ mobile applications.

Stem caster models include bumpers.

See Catalog Sheet 11.20 for stem casters.

Load Rating: 3 x Stem Caster Load Rating, maximum — 900 lbs. (363kg) per stem caster cart.

METROMAX Q™ POLYMER AND STEEL SHELVING

Starter and Add-On Units

- 4- and 5-tier models available. Consult the Metro catalog for models.
- Starter units: consist of shelves and (4) posts
- Add-on units: consist of shelves, (2) posts, and “S” Hooks (M9995)

“S” Hook: Used to “add on” one or multiple MetroMax Q™ storage systems while eliminating the cost of two posts per unit. Can be used to join units end-to-end, back-to-back, at right angles, etc. Two “S” hooks are required for each shelf.

Cat. No. M9995

MetroMax Q™ Intermediate

3 Gallon Automatic Electric Coffee Urn

Features

Automatic Electric Coffee Urn

- Brews 11.4 gallons (43.2 litres) of perfect coffee per hour.
- Three gallon (11.4 litres) coffee urn measuring only 14" wide fits most counters.
- Automatic drip brewing of delicious coffee every time.
- Large water tank—over 10 gallons.
- Draw off hot water during brewing cycle without affecting delivery of coffee.
- All stainless steel construction.
- Can brew full or half batches.
- Top mounted components for ease of service.
- International electrical configurations available.

Roll-In Refrigerator Models For 72" High Racks/Self-Contained

INTELA-TRAUL® Equipped!

Model RRI332HUT-FHS

One, Two & Three Section Models, 32" Deep

Stainless Exterior & Interior

1-Section Solid Door Model	RRI132HUT-FHS*
2-Section Solid Door Model	RRI232HUT-FHS*
3-Section Solid Door Model	RRI332HUT-FHS

Stainless Exterior, Anodized Aluminum Interior

1-Section Solid Door Model	ARI132HUT-FHS*
2-Section Solid Door Model	ARI232HUT-FHS*
3-Section Solid Door Model	ARI332HUT-FHS

The R & A Series represent Traulsen's Top-of-the-Line product offering. The "H-Height" roll-in refrigerator models are all designed to offer convenient interior storage for 72" high racks. Each is supplied standard with such high quality features as easy to operate microprocessor controls, balanced refrigeration systems and stainless steel exteriors. Additionally, they offer the widest range of optional accessories to choose from, and can be specified for use with many different applications, including: Foodservice, Correctional, Institutional, Export, etc.

Standard Product Features

- R-Series: Stainless Steel Exterior & Interior
- A-Series: Stainless Steel Exterior/Anodized Aluminum Interior
- INTELA-TRAUL® Microprocessor Control System
- Balanced, Self-Contained Refrigeration System Using R-134a
- Scroll Blower Type Evaporator Fan
- Biased Return Air Duct
- Full Length Stainless Steel Doors With Locks
- Self-Closing Doors With Stay Open Feature At 120 Degrees
- Guaranteed For Life Cam-Lift Hinges
- Guaranteed For Life Horizontal Work Flow Door Handle(s)
- Standard Door Hinging: 132H = Right, 232H = Left/Right, 332H = Left/Right/Right (other hings available)
- Automatically Activated Incandescent Lights
- Stainless Steel Breaker Caps
- Accommodates Roll-In Racks Up To 72" High (provided by others)
- Automatic Non-Electric Condensate Evaporator
- Magnetic Snap-In Door Gaskets
- Gasket Protecting Metal Door Liner
- Controllable Anti-Condensate Door Perimeter Heaters
- Thermostatic Expansion Valve Metering Device
- Stainless Steel One-Piece Louver Assembly
- Stainless Steel Interior Rack Guides & Threshold Ramp(s)
- 9' Cord & Plug Attached
- One Year Parts And Labor Warranty
- Two Year Control Warranty (parts and labor)
- Five Year Compressor Warranty

Options & Accessories

- Stainless Steel Finished Back With Rear Louvers
- Re-Hinging Feature For Door(s)
- Wire Shelf Package For Roll-In Models (includes three wire shelves per section)
- Additional Wire Shelves For Above
- Stainless Steel Shelf Package For Roll-In Models (includes three stainless steel shelves per section)
- Additional Stainless Steel Shelves For Above
- Locking Hasps (padlocks supplied by others)
- Export 220/50/1 Voltage
- Kool Klad Exterior Laminate Decor
- Clear Glass Door(s) In Place Of One Or More Solid Door(s)
- Fluorescent Lights
- Remote Applications (see form TR35837 for more details)
- Remote For Use With 20°F Glycol System
- Recessed Installation
- Prison/Correctional Facilities Options
- Two Year Service/Labor Warranty Available

* **Noted models are ENERGY STAR® listed. Please refer to www.energystar.gov to view the most up-to-date product listing and performance data.**

Listed by Underwriters Laboratories Inc., to U.S. and Canadian safety standards and Listed by NSF International.

Specifications

Construction, Hardware and Insulation

Cabinet exterior front, one piece sides, louver assembly and doors are constructed of 20 gauge stainless steel with #4 finish. Cabinet interior and door liners are constructed of stainless steel (anodized aluminum in the A-Series). The exterior cabinet top, back and bottom are constructed of heavy gauge aluminized steel. The interior floor is constructed of stainless steel and insulated with ¾" of resilient cork. A readily attachable stainless steel ramp is provided to facilitate loading/unloading.

Doors are equipped with a heavy-duty, extruded wiper gasket for sealing to bottom ramp, removable plug cylinder locks and guaranteed for life cam-lift, gravity action, self-closing metal, glide hinges with stay open feature at 120 degrees. Hinges include a concealed switch to automatically activate the interior incandescent lighting. Guaranteed for life, work flow door handles are mounted horizontally over recess in door which limits protrusion from door face into aiseways. Doors have seamless, polished metal corners.

Easily removable for cleaning, vinyl magnetic door gasket assures tight door seal.

Both the cabinet and door(s) are insulated with an average of 2" thick high density, non-CFC, foamed in place polyurethane.

NOTES

NOTE: Figures in parentheses reflect metric equivalents.

1= Based on a 90 degree F ambient and 20 degree F evaporator.

2= For approximate remote weights deduct 40 lbs. from respective net or gross weight. For other information on remote models, please refer to form TR35837.

One & Two Section Models Equipped With One NEMA 5-15P Plug

Three Section Models Equipped With One NEMA 5-20P Plug

NOTE: Full load amps and plug style may vary depending on electrical options chosen and condensing unit employed.

REQUIRED CLEARANCES

In order to assure optimum performance, the condensing unit MUST have an adequate supply of air for cooling purposes. Therefore, the operating location must either have a minimum of 12" clearance overhead of the condensing unit or allow for unrestricted air flow at the back of the unit. Clearance of at least 12" above is required in order to perform certain maintenance tasks.

NOTE: When ordering please specify: Voltage, Hinging, Door Size, Options and any additional warranties.

Continued product development may necessitate specification changes without notice.
Part No. TR35768 (revised 12/10)

Refrigeration System

A top mounted, self-contained, balanced refrigeration system using R-134a refrigerant is conveniently located behind the one piece louver assembly. It features an easy to clean front facing condenser, thermostatic expansion valve, air-cooled hermetic compressor, plenum effect blower coil, large, high humidity evaporator coil located outside the food zone and a top mounted non-electric condensate evaporator. Biased return air duct protects against introduction of warm kitchen air, promoting even temperature maintenance and efficient operation. A 9' cord and plug is provided. Standard operating temperature is 34 to 38°F.

Controller

The easy to use water resistant INTELA-TRAUL® microprocessor control system is supplied standard. Unit is NAFEM Data Protocol communication (NDP) ready. Optional hardware required to be NDP compliant. Third party software required for network connection. It includes a 3-Digit LED Display, Fahrenheit or Celsius Temperature Scale Display Capability, and an RS485 data port. In addition it includes audio/visual alarms for: Hi/Lo Cabinet Temperature, Door Open, Clean Condenser, Evaporator Coil and Discharge Line Sensor Failures, and Power Supply Interruption.

Interior

Readily removable, interior-mounted, stainless steel guides for rack are provided for protection. Maximum rack size with wheels inboard of frame is 27" wide by 29" deep by 72" high. Racks supplied by others.

Warranties

Both a one year parts and labor warranty and a five year compressor warranty (self-contained models only) are provided standard. An optional 2nd year extended parts and labor warranty is also available. In addition the INTELA-TRAUL® control is warranted by a two year parts and labor warranty.

TRAY AND RACK DISPENSER

- STAINLESS STEEL
- CANTILEVER DESIGN
- SELF LEVELING, FIELD ADJUSTABLE

- MOBILE
- SINGLE OR DOUBLE

Model Series: TRC-M-*

APPLICATION:

- Cafeterias
- Serving lines
- Tray make-up systems
- Back up storage
- Modular buffet systems

CAPACITY:

- Trays: App 100 – 150 trays
- Racks: 5 to 6 racks per stack
- Baskets: 5 to 6 baskets per stack
- Above capacities doubled for double units

DISPENSES:

- Trays
- Chinaware in racks
- Chinaware in baskets

SPECIFICATIONS:

- Stainless steel; Type 304
- “Heliarc” and spot welded construction
- All seams fully welded & polished
- Channel reinforced extended base for rigidity and stability
- Dispensing system in a steel upright uni-frame enclosure
- Cantilever dispensing system
- Dispensers are equipped with non-rusting springs that are heat treated for strength & durability
- With easy off back panel for spring removal
- Wrap-around bumper
- Push handle on rear as standard
- 4 > 5” swivel, non-marking casters with 4 side brakes

OPTIONAL FEATURES [1]:

- NP - Stainless steel nameplate
- PP - Push posts on top of unit
(Handle is removed when adding push posts)
- Sealed casters for cart wash
- STD-F - Flat style overshelf
- 8CD - Cylinder style overshelf
- OS4 - 4 pan overshelf
- TG - Stainless steel tray guides
- Remove (*) from model code for non-NSF models

TRAY MAKE UP CONVEYOR

- STAINLESS STEEL
- MODULAR DESIGN
- VARIABLE SPEED

MODEL SERIES: HCV-

SPECIFY WHEN ORDERING:

- Model number (belt length).
- Breaker panel amperage 100 Amp (standard) or 200 Amp (optional).
- Length of end cap for tray start end, 12" or 18" or 24".
- Length of end cap for tray finish end, 12" or 18" or 24".
- An equipment list showing electrical rating and type of end cap for each item to be plugged into this conveyor must be supplied. Available receptacle ratings are shown below.
- An approximate layout of equipment used around conveyor to be supplied so receptacles can be placed in proper locations.
- Raceway receptacle electrics
 - 120V / 60Hz / 1 PHASE
 - 208V / 60Hz / 1 PHASE
 - 208V / 60Hz / 3 PHASE
 - 120/208V / 60Hz / 1 PHASE
 - 120/208V / 60Hz / 3 PHASE

NOTE: QUANTITY OF RECEPTACLES ALLOWED WILL VARY DEPENDING ON THE BREAKER PANEL RATING AND THE REQUIRED AMPERAGE OF RECEPTACLES.

OPTIONAL EQUIPMENT: (Specify when ordering)

- 200 Amp breaker panel.
- 18" or 24" end caps. (Or any combination of end cap lengths).
- Extra raceway receptacles.
- Horizontally mounted side bumpers.
- Conveyor shipped in 2 or more sections for assembly on site.
- Conveyor installation and/or assembly at job site.

POWER SUPPLY BY OTHERS- 120/208 VOLT - 60 Hz - 3 PHASE

TRAY MAKE UP CONVEYOR

- STAINLESS STEEL
 - MODULAR DESIGN
 - VARIABLE SPEED
- MODEL SERIES: HCV-

SPECIFICATIONS:

- Stainless steel, type 304, #4 finish on all exposed surfaces.
- Modular design allows units to be shipped assembled (when length permits) or dis-assembled.
- Adjustable mounting feet allow variable working heights and make up for uneven floor surfaces.
- Easy cleaning, endless, laminated belt with take-up adjustment.
- Belt scraper with crumb catcher for continuous cleaning during operation.
- Variable belt speed control located at 'finish' end of conveyor.
- 'Start' and 'stop' controls at both 'start' and 'finish' end of conveyor.
- Automatic tray stop control at 'finish' end of conveyor.
- Electrical raceway with removable cover and up to 6 plug-in receptacles as standard. Extra receptacles optional.
- Individual breaker circuits for each receptacle.
- All circuits heavy wired for maximum 30 Amp load for possible future electrical changes.
- 100 Amp main breaker panel with main disconnect.
- 12" end cap on each end is standard with 18" or 24" end caps available at no extra charge.
- Drive housing with removable access panels on three sides contains all drive equipment and main breaker panel.

TRAY MAKE UP CONVEYOR

- STAINLESS STEEL
- MODULAR DESIGN
- VARIABLE SPEED

MODEL SERIES: HCV-

TRAY START END CONTROLS

TRAY FINISH END CONTROLS

NOTES REGARDING CONVEYORS:

- Some conveyors may have to be shipped dis-assembled due to length or other factors.
- When unit is shipped dis-assembled it is separated at the body sections and leg locations.
- When installing conveyors they must be levelled widthwise, lengthwise and corner to corner.
- If conveyor is to be shipped assembled it is advisable to verify that there is enough room in hallways, elevators, around corners etc. for conveyor to be installed as one assembled piece. Some installations require the conveyor to be shipped dis-assembled to allow it to be positioned correctly.
- Numerous receptacle provisions are provided to allow for addition of more receptacles or the relocation of existing receptacles in the future due to kitchen layout changes. The provisions are spaced such that power cords from units plugged into them will not be in the way of the operators.
- Quantity of receptacles depends on receptacle rating and size of main breaker panel.

HOT FOOD SERVER

- STAINLESS STEEL
- 1 TO 6 WELLS
- DRY OR MOIST HEAT OPERATION

- MOBILE
- PLUG-IN OPERATION

Model Series: HFS-M-*

APPLICATION:

- Cafeterias
- Serving lines
- Tray make-up systems
- Modular buffet systems

SPECIFICATIONS:

- Stainless steel; Type 304
- “Heliarc” and spot-welded construction
- Solid full base with full length reinforcing channels
- Lower base area is open on operator side and enclosed on other 3 sides
- Lower base is available for storage with various optional shelves and doors
- Unit has recessed end panels to ensure protection to breaker panel, drain spigot and push handles
- Recessed push handle on each end
- Recessed electrical breaker panel on one end with recessed drain spigot and hose on opposite end
- All wells have individual drains connected to a common manifold and spigot
- Drain spigot comes with drain hose for floor drain and hose holder
- Each well is individually controlled by a variable heat setting thermostat with heat cycling “on/off” pilot light indicator
- Well controls are mounted on a slightly tilted control panel ease of visibility
- 1220 pan size standard with optional adapters for modular fractional sized pans
- Each well and each electrical option runs on an individual circuit breaker
- Approved power supply cord with 3 prong end cap
- Customer to advise power cord position: operator’s left or right
- Wrap-around perimeter bumper
- 4 > 6” swivel, non-marking casters with 2 black total lock brakes

OPTIONAL FEATURES [1]:

- See next page
- Remove (*) from model code for non-NSF models

Due to electrical limitations certain electrical options may not be used in the same unit as other electrical options without requiring an optional special breaker panel. This is determined by the electrical rating requirements of the unit with options. Refer to factory when ordering for confirmation of option availability.

Shelf in base may not be used with pan slides in base as listed here. Refer to factory for availability and price if both are required in same unit.

Breaker panel with cord and drain spigot will be located on opposite ends for electrical safety regulations.

HEATED BASE/PLATE DISPENSER — MOBILE — STAINLESS STEEL — UNIVERSAL — CANTILEVER DESIGN — DUAL HEAT — SELF LEVELLING, FIELD ADJUSTABLE — 1 TO 3 STACK

APPLICATION:

- Tray make up systems
- Serving stations
- Cafeterias
- Back up storage convenience

AFDH-M-2 WITH BASES SHOWN

DISPENSES:

- China or special composition plates (eg Alicite, Thermacite etc) up to and including 10" plate diameter.
- Stainless steel or alloy composition bases up to and including 10" base diameter.

SPECIFICATIONS:

- Stainless steel, type 304, #4 finish on all exposed surfaces.
- Heli-arc and spot welded construction.
- Channel reinforced base for stability and rigidity.
- The dispensing system is in an independent steel, upright uni-frame enclosure for strength and rigidity.
- Cantilever dispensing systems consist of an all welded 'uni-head' assembly with precision roller bearings running on vertical guide shafts controlled by stainless steel extension springs.
- Carrier platform is full length as standard. (Split carrier optional).
- Cover is full length as standard. (Split cover optional).
- Cover is a double panelled stainless steel, insulated design.
- Cover is double hinged fold back design with handle.
- Stainless steel push handle with bumper for added protection.
- Wrap-around bumper.
- 5" all swivel, non-marking, heavy duty casters with brakes on 2.
- Convection type heating with fan forced horizontal air flow.
- Variable heat setting thermostat with 'OFF' position.
- 'ON-OFF' toggle switch.
- 'POWER ON' and 'THERMOSTAT ON' indicator pilot lights.
- 'LOW HEAT' and 'HIGH HEAT' indicator pilot lights.
- Internally mounted selector switch for 'LOW HEAT' and 'HIGH HEAT' to prevent accidental changing of heat setting.
- Approved power supply cord with 3 prong grounded end cap (NEMA #6-20P).
- Unit complete and ready for plug-in operation.

ELECTRICS: (Specify when ordering)

208V / 60Hz / 1 PHASE / 20 AMP
240V / 60Hz / 1 PHASE / 20 AMP

OPTIONAL EQUIPMENT:

- Stainless steel engraved nameplate.
- Split cover and carrier platform.

Meal Delivery Carts

Low Profile, Double Door, 20 Tray Capacity

Models **MDC1520S20**
MDC1418S20

Features & Benefits

- Durable carts designed to specifically meet the meal delivery needs of hospitals (acute care), long term care and correctional facilities.
- Designed to work with unitized pellet system, heat on demand base system or insulated trays.
- Single stack rail system handles 2 trays per rail, 10 trays per compartment with a 5 1/2" (14 cm) clearance between rails.
- Meal serving capacity per compartment is 10 each 15" x 20" (38 x 52 cm) or 14" x 18" (36 x 46 cm) fully loaded trays.
- Durable, one-piece, molded polyethylene construction ensures long term durability and reliability. Molded bottom bumpers protect walls and furniture.
- Thick foamed-in place polyurethane insulation provides added structural strength and reduces noise while transporting. High performance self venting optimizes food quality.
- Molded-in marine rail top provides an ergonomic work surface and keeps trays secure during service preparation.
- Molded-in handles on both ends make it easy to transport and maneuver.
- ABS doors are non-insulated, durable and open out and over side bumper for clear access to the full tray width.
- Nylon friction latches ensure that doors close securely.
- Self-draining bottom in each compartment facilitates easy cleaning.
- Casters:
MDC1520S20: Two each 8" (20,3 cm) fixed center wheels on an axel and two each 5" (12,7 cm) side swivel casters with brakes are set in a unique diamond configuration for easy steering.
MDC1418S20: Four each 5" (12,7 cm) non-marking slightly offset casters, two swivel with brake and two rigid.
- Non electrical.
- No assembly required.
- Available in 5 colors.

HIGH VOLUME CONVEYOR TOASTERS

QCS Features/Benefits:

- Patented forced convection keeps the toaster cool to the touch and extends the life of critical components. The forced convection increases productivity by re-circulating pre-heated air into toasting chamber.
- Quartz infrared heaters provide faster, more consistent heating than traditional heating elements.
- High performance -
 - QCS3-1300 produces an industry leading 1300 slices per hour.
 - QCS3-1000 produces 1000 slices per hour.
 - QCS3-950H with a 3" product opening produces 950 slices per hour.
- High volume compact toaster - requires only 18-1/2" of counter space and our patented forced convection system allows the unit to be placed against a wall. Other toasters have louvers requiring additional counter space.
- Easy to use control panel takes the guesswork out of temperature and speed control settings.
- Variable speed and top/bottom heat control for perfect color and texture of bread, bagels, English muffins and more!
- Energy efficient operation with power saver switch that reduces electricity consumption by 75%. And our quartz heaters return to full power in seconds vs. minutes for metal-sheathed elements.
- Extended conveyor belt for easy loading and large warming area for higher production.
- Safe load up area with full width coated front burn guard and cool to the touch exterior.
- "Smart" crumb tray keeps the breadcrumbs from falling under the toaster.
- Heated holding area to keep toast at the perfect temperature.
- Hi-limit switch prevents toaster from overheating protecting critical component parts.
- 24 hours 7 days a week technical support by Holman technicians.

QCS3-950H

QCS3-1000

QCS3-1300

Applications:

Looking for high performance toasters that will keep pace with a hungry crowd - all day long. Our QCS3 series toasters will deliver day and night. Whether you are a high volume school cafeteria or a high volume breakfast restaurant, Holman's QCS3 series will provide high capacity and consistent toasting.

Quality Construction:

No matter how you slice it, Holman delivers high quality, reliable toasters. Stainless steel construction for long lasting durability. Heavy-duty motor, drive chain and conveyor speed control for superior reliability. Conveyor belt tension system for smooth and quiet operation. High performance Quartz Infrared Heaters for superior toasting performance and reliability. Units are easy to disassemble with one-piece cover for cleaning and service. Toasters are furnished with 1" adjustable legs and 4' cord.

Warranty:

Holman's conveyor toasters are covered by a one-year parts and labor warranty.

¹Can be supplied with metal sheathed heaters (no additional charge), however production will be reduced.

Typical Specifications

High volume conveyor toasters are constructed of corrosion resistant stainless steel. Supplied with heavy-duty motor, drive chain and fast heat up quartz infrared heaters. A conveyor belt tension system is supplied for a smooth, quiet operation. Units are supplied with variable speed control, top and bottom heat control, power saver and high limit switch. Extended conveyor belt, crumb tray, heated holding area and full width burn guard are standard. Unit has a one-piece cover for easy access with 1" adjustable legs and a 4' cord. Units are listed with UL, CUL and are UL certified to NSF4. Printed in the U.S.A.

TOASTER TABLE WITH BREAD DISPENSER

- STAINLESS STEEL
- HEAVY DUTY
- MOBILE OR STATIONARY

- LOWER STORAGE AREA
- TRAY SLIDES

MODEL No: TT-DS-

APPLICATION:

- Toaster table
- Reject table
- Preparation table
- Inspection table

SPECIFICATIONS:

- Stainless steel, type 304, #4 finish.
- Heavy duty, heli-arc welded construction.
- All welds smoothed and polished.
- Open sides and front and back.
- Heavy gauge reinforced top.
- Heavy gauge base welded to tubular frame uprights.
- Sanitary no-drip edge on base.
- Double lower storage area for trays.
- Heavy gauge tray slides welded to frame uprights.
- Tray stops at front and rear of slides.
- 5" [127] tray slide spacing.
- Complete with Model SBD-D/I-1 drop-in bread dispenser.
- Dispenser is self leveling with flip-up dust cover.
- 5" all swivel, heavy duty, non-marking casters.
- Brakes on 2 casters.

OPTIONAL EXTRAS:

- Stationary mounting feet instead of casters.
- Wrap around perimeter bumper.
- Corner bumper.
- Donut bumpers (add 1/2" to height).
- S/S enclosed sides.
- S/S enclosed rear.
- Coloured laminate panel enclosed sides.
- Coloured laminate panel enclosed rear.

MOBILE HUMI-TEMP PAN SERVERS

Humidified Holding System for 12" x 20" and Gastro-Norm 1/1 Pans

"PS-1220 SERIES"

PS-1220-8

PS-1220-45

PS-1220-15

FWE's built-in "Humi-Temp" system keeps pans of bulk foods "kitchen-fresh", hot and moist!

FWE's PS-Series "Humi-Temp" cabinets accommodate shallow and deep 12" x 20" and GN 1/1 pans. FWE's unique pan slide racks are one piece die stamped stainless steel, providing greater hygiene and strength. The front edges are relieved for easy loading and the pair of racks are removable for easy cleaning.

FWE's patented "Humi-Temp" Heat / Humidity System eliminates hot and cold spots by gently circulating hot, moist air throughout the interior of the cabinet. Humidity can be added to preserve the moisture content of the food keeping the food fresh and hot for hours.

The heat system is built into the cabinet to reduce maintenance and cleaning costs. Clean up is effortless. The controls are upfront and eye-level and feature a full range thermostat adjustable to actual temperature so they are easy to see and operate. Our cabinets are built tough using stainless steel throughout. Welded construction and our exclusive tubular stainless steel base frame ensure that our cabinets will withstand the most demanding use. And when it comes to selection, no one offers more than FWE. We offer sizes and capacities to fit any operation. Make your choice FWE . . . the "Choice of the Professionals"

- ◇ "Humi-Temp" built-in heat system
- ◇ Removable humidity reservoir
- ◇ Full range thermostat adjustable to actual temperature
- ◇ Recessed eye-level controls
- ◇ All stainless steel
- ◇ All welded construction - no rivets
- ◇ Tubular stainless steel welded base frame
- ◇ Full extension bumper
- ◇ Heavy-duty polyurethane casters
- ◇ Heavy-duty hinges
- ◇ Positive close door latch
- ◇ Heavy-duty push bars
- ◇ Hi-temp door gasket
- ◇ Fully insulated throughout
- ◇ Stainless steel pan slides
- ◇ Two year limited warranty

Dedicated circuit.

CONSTRUCTION. Heliarc welded, single unit construction of stainless steel; 20-gauge polished exterior, 22-gauge stainless steel interior with easy-to-clean covered corners. Welded tubular base frame shall be 1" square, heavy gauge stainless steel tubing, with 10-gauge stainless steel reinforcing plates at corners.

INSULATION. "Ultra-Guard" UG-26 high density fiberglass insulation throughout; top, back, bottom, sides, and door(s).

PUSH BAR HANDLES. Heavy-duty, solid formed 1" x .375" thick, mounted at each end of unit. Mountings reinforced with stainless steel channel.

BUMPER. Solid 1.5" wide continuous wraparound aluminum channel, bolted to frame, with snap-in, non-marking replaceable vinyl cushion. Full perimeter bumper extends beyond doors, handles, etc., for added protection. Shall be continuous, with corner cut-outs to facilitate cleaning.

DOORS AND LATCHES. Flush mounted, stainless steel insulated doors. High temperature gasket sealed; gasket shall be cabinet mounted. Each door shall have two (2) heavy-duty edgemount die cast hinges. Door latch shall be edgemounted, full grip, and positive closing. The hinge and latch mountings are reinforced with stainless steel backing plates.

CASTERS. Maintenance free polyurethane tire casters in a configuration of two (2) rigid and two (2) swivel with brake. Casters shall have a reinforced yoke mounted to 10-gauge caster plate. The caster mounting plate shall be secured to a 10-gauge stainless steel reinforcing stress plate via welded in place stainless steel studs. The reinforcing stress plates shall be welded to the heavy gauge tubular frame of the unit.

PAN SLIDES. Stainless steel racks shall be one piece die stamped channel-type pan slides at 2.625" (66.7 mm) spacings to accommodate either deep or shallow 12" x 20" or GN 1/1 pans (at varying capacities - see chart). Racks are removable without tools for cleaning. Racks shall lift off heavy-duty stainless steel supports.

HEATING SYSTEM / CONTROLS. Patented built-in "Humi-Temp" system shall include an Incoloy nickel-chromium alloy heating element and Hi-Temp, self-lubricated, impedance protected fan-cooled blower motor. Cabinet shall have humidifying chamber and drawer style baffled humidifier pan. Both shall be stainless steel and removable. Controls shall be up-front, recessed and shall include a full range thermostat adjustable to actual temperature. Thermostat shall include temperature scale marked in ten degree increments (F/C) from 90° to 190°F (30° to 90°C). An operational range thermometer, power supply light, thermostat cycling light, and 20 amp ON/OFF switch are also included.

ELECTRICAL CHARACTERISTICS. 3 wire grounded 10 foot extension power cord and plug, side mounted for safety. See electrical data chart above for amperage and receptacle configuration. Dedicated circuit.

FWE Products are used by major companies world-wide. We can modify, design, or custom build equipment to fit your special requirements.

Optional Accessories:

- Electronic controls
- Digital thermometer
- 1500 or 2000 watt element
- 220 volt, 50/60 Hz, single phase
- CE compliant
- Heat retention battery
- "Convert-a-Unit" for canned fuel use
- MODELS: PS-1220-8 PS-1220-10 PS-1220-15 PS-1220-6-6
- Dutch doors †
- See-thru lexan door
- Key locking door latch
- Magnetic latch
- Paddle latch
- Padlocking transport latch
- Left hand door hinging
- Security packages
- All swivel or larger casters
- Door edge trim
- Cold plate cartridge
- Floorlock (requires 6" casters)
- Custom pan slide spacings

FWE products may be covered under one or more of the following U.S. patents: 288,299;238,300;3,952,609;4,192,991.

THE Sōta™

PERFORMANCE

Utilizing TurboChef's patented technology to rapidly cook food without compromising quality, the Sōta provides superior cooking performance while requiring less space and consuming less energy.

VENTILATION

- UL 710B (KNLZ) listed for ventless operation.[†]
- EPA 202 test (8 hr):
 - Product: Pepperoni Pizzas
 - Results: 0.64 mg/m³
 - Ventless Requirement: <5.00 mg/m³
- Internal catalytic filtration to limit smoke, grease, and odor emissions.

1. Blower Motors
2. Microwave System
3. Stirred Impinged Air (Top) and Microwave
4. Impinged Air (Bottom)
5. Catalytic Converter
6. Impingement Heater
7. Vent Tube Catalyst
8. Air Filter
9. Inlet Air for Cooling Electronic Components

SPECIFICATION SHEET

EXTERIOR CONSTRUCTION

- Powder coated, corrosion-resistant steel outer wrap and door
- Die-cast aluminum front panels with matte-chrome accents
- Cool-to-touch exterior; all surfaces below 50°C
- Ergonomic matte-chrome door handle
- 4-inch nickel-plated legs

INTERIOR CONSTRUCTION

- 201/304 stainless steel
- Fully welded and insulated cook chamber
- Removable rack and lower jetplate

STANDARD FEATURES

- Independently-controlled dual motors for vertically-recirculated air impingement
- Top-launched microwave system
- Stirrer to help ensure even distribution of air and microwave
- Integral recirculating catalytic converter for UL 710B (KNLZ) listed ventless operation
- External air filtration
- Vent catalyst to further limit emissions and odors
- LED timer counts down last 30 seconds of cook time
- Smart menu system capable of storing up to 256 recipes
- Flash firmware updates via smart card
- Single or dual-temperature interface
- Field-configurable for single or multiphase operation (requires service call)
- Self-diagnostics for monitoring oven components and performance
- Smart Voltage Sensor Technology* (U.S. only)
- Stackable (requires stacking stand)
- Warranty – 1 year parts and labor

COMES WITH STANDARD ACCESSORIES

- 1 Bottle Oven Cleaner (103180)
- 1 Bottle Oven Guard (103181)
- 2 Trigger Sprayers (103182)
- 1 Solid Aluminum Pan (i1-9496)
- 1 Aluminum Paddle (NGC-1478)

This product conforms to the ventilation recommendations set forth by NFPA96 using EPA202 test method.

* Smart Voltage Sensor Technology does not compensate for lack of or over voltage situations. It is the responsibility of the owner to supply voltage to the unit according to the specifications on the back of this sheet.

[†] Ventless certification is for all food items except for foods classified as "fatty raw proteins." Such foods include bone-in, skin-on chicken, raw hamburger meat, raw bacon, raw sausage, steaks, etc. If cooking these types of foods, consult local HVAC codes and authorities to ensure compliance with ventilation requirements.

Ultimate ventless allowance is dependent upon AHJ approval, as some jurisdictions may not recognize the UL certification or application. If you have questions regarding ventless certifications or local codes, please email ventless.help@turbochef.com

UC4532N Undercounter: Reduced Height Front-Breathing Self-Contained Undercounter Freezer Bases

Models

- UC4532N Single section freezer undercounter with a door
- **UCD4532N** Single section freezer undercounter with drawers

UCD4532N

Standard Features

- 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet or an existing line up
- Durable, rugged stainless steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable - it won't dent, chip or corrode and is backed by a limited lifetime warranty
- Heavy duty self-closing hinges
- "D" prefix models feature Delfield's exclusive new drawer system. Drawers are backed by a 10-year warranty on the track assembly
- Environmentally friendly R404A refrigerant
- High density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low
- Black recessed quick grip handle
- Standard on 3" casters for easy cleaning and installation
- 60-cycle single phase electrical system
- 6' cord and plug supplied

- One epoxy coated wire shelf standard, installed per door section
- Electronic control
- Three year parts and labor warranty and an additional two year compressor parts warranty

Options & Accessories

- 18" wide single tier overself
 - Stainless steel finish on back
 - Plastic laminate on front
 - Additional wire shelves
 - Door lock (solid door models only)
 - Exterior thermometer (solid door models only)
 - Interior lights
 - 220V/50 Hertz electrical system*
- * Inclusion of this option will alter electrical specifications of the unit

Specifications

Exterior top is one-piece, 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel.

Interior sides of door models are thermoformed ABS plastic with integral shelves supports. Interior back is one-piece 22-gauge stainless steel. Interior bottom and top are thermoformed ABS plastic. Base is fully insulated with high-density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses HFC-404A refrigerant. Compressor, condenser coil and condensate evaporator are mounted on rear of the cabinet. Evaporator coil is located on the interior rear wall of the cabinet. Refrigerant flow is controlled by a txv valve. Cabinet maintains an interior cabinet temperature of -5°F to 0°F (-21°C to -18°C).

Electronic control is located on the exterior back of the cabinet. It allows the unit to maintain consistent temperatures in heavy duty conditions.

Electrical connections are 115 volt, 60 Hertz, single phase. Unit has a 6' (1.8m) long electrical cord and NEMA 5-15P plug.

Casters: Equipment is mounted on 3" (7.6cm) diameter plate casters. Equipment clearance above the floor is 0.66" (1.7cm).

Doors have a 24-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet of door models has one adjustable epoxy coated wire shelf.

Drawers have a 24-gauge stainless steel exterior with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Drawer units have two drawers. Top drawer holds two 12" x 20" (30.5cm x 50.8cm) 4"-6" (10.2cm-15.2cm) deep pans. Bottom drawer holds two 12" x 20", 4" deep pans. Pans are supplied by others.

INSTALLATION NOTE:

Refrigeration system is designed so that air will flow under the unit, through the compressor area and out the front of the unit. Any restriction to this air flow path will void the warranties.

PLEASE NOTE:

Air flow through the louver on the back of the unit is not necessary for operation, however, any air which passes through the louver is beneficial.

- 220V/50 Hertz electrical system*

* Inclusion of this option will alter electrical specifications of the unit

Specifications

Exterior top is one-piece, 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel.

Interior sides of door models are thermoformed ABS plastic with integral shelves supports. Interior back is one-piece 22-gauge stainless steel. Interior bottom and top are thermoformed ABS plastic. Base is fully insulated with high-density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses HFC-404A refrigerant. Compressor is 1/5 H.P., with condenser coil and condensate evaporator mounted on rear of the cabinet. Evaporator coil is located on the interior rear wall of the cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior cabinet temperature of 36°F to 40°F (2°C to 4°C).

Electromechanical control is mounted on the right side of the evaporator housing inside the cabinet. It allows the unit to maintain consistent temperatures in heavy duty conditions.

Electrical connections are 115 volt, 60 Hertz, single phase. Unit has a 6' (1.8m) long electrical cord and NEMA 5-15P plug.

Casters: Equipment is mounted on 3" (7.6cm) diameter plate casters. Equipment clearance above the floor is 0.66" (1.7cm).

XO-1M Tabletop Oven

Project _____

Item _____

Quantity _____

SIZE:

XO-1M - 21-1/8" High, 27-1/8" Wide, 27-3/4" Deep
537 mm High, 689 mm Wide, 705 mm Deep

NU-VU's XO-1M tabletop ovens are designed to hold up to either five 12"x18" half size sheet pans or five 12"x20"x2-1/2" food service pans. With exclusive circulating air and heat, they are excellent for baking and reheating all types of food products. There is never a need to turn the pans. Since the XO-1M's don't require venting in most areas, they can be located throughout the store.

With a variety of options, the XO-1M can be the ideal oven for a wide variety of applications.

The XO-1M is the big brother to the XO-1. The XO-1 has the ability to hold either three or four half-size sheet pans, and is available as a 120 Volt unit.

These units also feature flush mount doors, which means no sagging or leaking. Lift off hinges allows for easy cleaning.

STANDARD FEATURES:

- Stainless steel construction
- 4" adjustable legs
- Full view tempered glass door
- Silicone rubber gasket on door
- Squirrel cage fan

OPTIONAL FEATURES:

- Solid door
- Internal steam
- Condensing reservoir
- Stacking kit
- Wire racks
- Programmable controls
- Cart or stand with or without panslides

CONSTRUCTION:

- Welded stainless steel
- Fully insulated
- Control panel accessible through front of unit
- Heating elements accessible inside of cabinet and through side

CONTROLS:

- Solid state controls
- Indicator light for thermostat
- Two speed fan switch

BrewWISE® Dual ThermoFresh® DBC Multi-Phase Brewer

PROJECT _____

DATE _____

Features

BrewWISE® Brewing System with ThermoFresh® Servers

- Brewer can be field converted to operate on either 3 phase or 1 phase.
- Stores individual coffee recipes so operator can easily brew many varieties.
- Coffee extraction controlled with pre-infusion and pulse brew, digital temperature control and large sprayhead; coffee strength controlled with variable by-pass.
- Operate any combination of BrewWISE® equipment error-free with wireless brewer-grinder interface through the Smart Funnel®.
- SplashGard® funnel and optional funnel locks help improve safety.
- Master on/off switch.
- ThermoFresh® servers are vacuum insulated to keep coffee hot and fresh for hours. (sold separately)
- Create coffee recipe cards with custom recipes, ad cards with messages that display on the brewer LCD, and dedicated funnels for special coffees with the BrewWISE Recipe Writer using your PC (U.S. and English Windows® compatible).
- Brew capacity varies. See back for details.

Dual TF DBC Multi-Phase with 1.5 gallon TF Servers *(servers sold separately)*

Dimensions: 35.7" H x 21.8" W x 20.2" D
(90.7cm H x 55.4cm W x 51.3cm D)

Brewing capacity: based upon incoming water temp of 60°F (15.5°C), 140°F rise (60°C) per 1/2 gallon brew time of 4 minutes. Equipped with funnel locks.

Electrical: Brewer is configured for 3-phase (with neutral) use. By moving one wire in brewer's terminal block, the same unit can be configured for 1-phase (230 volt) operation.

3-Phase - Phase to phase = 400V (will work on any voltage rated 380-415). Phase to neutral = 230V. 4 wire plus ground, 50/60 Hz, 3 active heaters.

1-Phase - Voltage = 230, 2 wire plus ground, 50/60Hz, 2 active heaters.

Plumbing: 20-90 psi (138-621 kPa). Machine supplied with 1/4" male fitting. Tank capacity: 10.6 gallons (40.1 L)

PANINI

CONCEPT

ELECTRIC PANINI PRESSES

A complete range of panini grills especially suited for creative food the easy way

- Fine grain cast iron grooved and smooth plates
- Stainless steel base for lasting service
- Adjustable spring counter balanced top
- Detachable front drip tray and scraper for convenient cleaning
- Even heat distribution through top and bottom plates
- Rapid grilling of sandwiches, meat, fish and vegetables
- Thermostatically controlled up to 570°F
- On/off switch and pilot lights for convenience and safety

208/240 V

DIABLO

OPTIONS:

- * grooved top and bottom plates
- * smooth top and bottom plates
- * smooth right top and bottom/ grooved left top and bottom
- * smooth bottom/ grooved top.
- * optional timers (2 required)

SPECIFICATIONS:

- Stainless steel type 304, #4 finish on all exposed surfaces.
- Heli-arc and spotwelded construction.
- Self contained unit ready for drop-in installation.
- Sealed interior liner is isolated from cabinet exterior by a plastic breaker strip for condensation control.
- Single recessed cold pan is supplied with perforated bottom spacers.
- Drip pan with drain to spigot located under cold tank to catch condensation run-off.
- Drain in cold pan connected to drain spigot under unit.
- For standard 1220 full size pans with adapters for optional fractional size pans.
- Fan cooled hermetically sealed condensing unit.
- Evaporator tubing is refrigerant grade solid walled copper.
- Unit is complete with evaporator tubing, compressor and controls.
- Plug-in operation with approved power cord and grounded end cap. (NEMA 5-15)

REGULATORY APPROVALS

- ETL Listed Certified to CAN/CSA 22.2
- ETL Listed Conforms to UL 471
- ETL Sanitation Conforms to NSF 7

Important Note:

- 1) 52" minimum door entry clearance required (without shipping skid).
- 2) Units are supplied with levelers. They must be adjusted during installation to ensure the unit is level and plumb. Dimensions reflect levelers extended 1 1/4".

SS-8T, SS-10T BUILT-IN ROUND FOOD WARMERS

SS-8T, SS-10T BUILT-IN ROUND FOOD WARMERS

Wells SS-8T and SS-10T Built-In Round Food Warmers have stainless steel, deep-drawn warming pans and are suitable for either wet or dry operation. These warmers are designed for installation into a metal counter only and can adapt to a variety of sizes to fit your needs.

Features

- **The tubular element**, located under the warming pan, allows for quick and efficient heating.
- **Positive-off thermostat** controls the element, allowing for adjustable and more consistent temperatures.
- Control is provided with an **oval panel with protective guard ring** to prevent accidental temperature changes.
- Models are available with an **optional 1/2" drain (D)**.
- Warmers are designed for either **wet or dry operation**.
- **Wellslok** allows for quick and easy installation in stainless steel countertops.
- **The SS-8T and SS-10T Warmers** are Underwriters Laboratories, Inc. RECOGNIZED and meet NSF International and Canadian standards.
- **A one-year warranty** against defects covers parts and labor.

NOTE: Specifications are subject to change without notice. See installation instructions prior to installing the unit. This document is not for installation purposes. The installation of recognized component units requires additional evaluations to Underwriters Laboratories, Inc. standards.

THIS UNIT IS DESIGNED TO BE INSTALLED IN METAL COUNTERS ONLY.

POP-UP TOASTERS

Models TPT-120, -208, -240,

The Hatco Pop-Up Toasters are economical, fast, dependable and versatile. These toasters provide even golden toasting of a variety of bread products.

FLEXIBILITY

Perfect for self-serve buffet areas and lighter volume restaurants, diners, and cafes, the Hatco Pop-Up Toasters also make a great addition to your conveyor toaster for those non-peak periods when an occasional order of toast is needed.

All models have four self-centering 1.25" (32 mm) extra wide slots.

QUALITY

The following features assure the finest performance for years to come:

- Evenly toasts a variety of bread products including bagels, Texas toast, waffles, and English muffins.
- Durable stainless steel construction.
- Individual progressive color controls.
- Removable crumb trays for easy cleaning.
- 6' (1829 mm) cord with plug.
- A bagel selector switch for single (or double) sided toasting (excluding TPT-120).

GR2SDS-24D, -30D, -36D, -42D, -48D, -54D, -60D

Designed to hold hot wrapped food at optimum serving temperatures without affecting quality, the Hatco Glo-Ray® Designer Merchandising Warmers are the perfect displays to showcase hot fast foods and boost impulse sales.

Combining state-of-the-art design with performance, these warmers place the focus on the product while holding hot food safely at proper serving temperatures. The modern design is perfect for front of the house use. Designer powdercoated inset panels blend these units with the décor while providing a durable, easy-to-clean surface.

Glo-Ray Designer Merchandising Warmers have prefocused infrared top heat and a thermostatically-controlled, hardcoated heated base to extend the holding times of most food. All models are made of aluminum with tempered glass end panels. Shatter-resistant incandescent lights illuminate the food holding area.

FLEXIBILITY

This warmer offers the convenience of self-serve and the efficiency of kitchen-to-server holding.

Available with slant or horizontal shelves, the Glo-Ray Designer Merchandising Warmers are offered in both single and dual shelf models. The Designer series warmers come standard with black inset panels and black end caps. Choose from six other color options to blend the warmer with any décor. Non-standard colors are non-returnable.

QUALITY

The following features assure the finest performance for years to come:

- All models have prefocused infrared top heat directing heat to the outer edges of the holding surface where heat loss is the greatest.
- These warmers feature a thermostatically-controlled, hardcoated heated base, Designer color inset panels, 4" (102 mm) Designer legs, and a cord and plug set.
- Available in heated surface widths from 23.88" to 59.88" (606 to 1521 mm) with overall widths of 30.25" to 66.25" (768 to 1683 mm).
- Shatter-resistant incandescent lights enhance product display while safeguarding food products from bulb breakage.
- An optional Indicating Temperature Control enhances accurate control of temperature.

DIMENSIONS

Horizontal Models (GR2SDH) –

Single: 30.25" - 66.25"W x 27"D* x 18.08"H (768-1683 x 686 x 459 mm).
Dual: 30.25" - 66.25"W x 27"D* x 29.02"H (768-1683 x 686 x 737 mm).

Slant Models (GR2SDS) –

Single: 30.25" - 66.25"W x 26.64"D* x 22.8"H (768-1683 x 677 x 579 mm).
Dual: 30.25" - 66.25"W x 26.64"D* x 33.86"H (768-1683 x 677 x 860 mm).

Heated Surface: 23.88" - 59.88"W x 22"D (606-1521 x 559 mm).

* Optional ITC: adds 1.83" (47 mm) to model depth.

VOLTAGE

GR2SDH-24 to -48 & GR2SDS-24 to -48: 120 volts, single phase (uses NEMA 5-15P, models GR2SDH-42 to -48 & GR2SDS-42 to -48 uses NEMA 5-20P for Canada).

GR2SDH-54 & GR2SDS-54: 120 volts, single phase (uses NEMA 5-20P).

GR2SDH-60 & GR2SDS-60: 120 volts, single phase (uses NEMA 5-30P).

GR2SDH-24D & GR2SDS-24D: 120 volts, single phase (uses NEMA 5-15P, uses NEMA 5-20P for Canada).

GR2SDH-30D to -54D & GR2SDS-30D to -54D: 120/208 volts, or 120/240 volts, single phase, 4-wire (uses NEMA L14-20P).

GR2SDH-60D & GR2SDS-60D: 120/208 volts or 120/240 volts, single phase, 4-wire (uses NEMA L14-30P).

Export voltages available.

CORD LOCATION

Back center of base on control side.

PLUG CONFIGURATIONS

- Indicating Temperature Control (ITC)
- Halogen Bulbs in lieu of Standard Display Lights
- Customer Side Front Glass (in lieu of Sneeze Guards or Flip-up Doors) (Cannot have channel dividers or divider rods)

ACCESSORIES

- Additional Stainless Steel Divider Rods
- Flip-up Control Cover
- Display Sign Holder (Signs not included)

The infrared heating element shall be tubular metal sheathed and the warmer shall have a 6' (1829 mm) cord with plug attached.

Accessories shall include additional stainless steel dividers rods, flip-up doors, display sign holder, and control covers.

One year on-site parts and labor warranty, plus one additional year parts-only warranty on all Glo-Ray metal sheathed heating elements, with 24/7 service (U.S. and Canada only)

MOD-100TD, 200TDM, 300TDM, 400TDM, 500TDM WARMERS WITH AUTO WATER FILL

MOD-300TDM

Features

- All models have an **automatic water fill system** that maintains the proper water level in each pan through the use of a water sensor and solenoid valve.
- **Individual controls** for each well give the warmers maximum versatility.
- Thermostats are combined with **higher wattage elements** to provide quicker heat-up and faster recovery.
- **Fully insulated** for greater efficiency.
- **A one-inch diameter drain manifold** (DM models) is provided to allow for a single drain connection at the left or right front corner. MOD-100TD has a one-half inch drain.
- **Each well is one-piece, deep-drawn, stainless steel** for maximum strength and durability.
- Warmers are designed for **wet operation only**.
- **Wellslok** allows for quick and easy installation in stainless steel countertops.
- The MOD Series Warmers are **Underwriters Laboratories, Inc. LISTED** and meet NSF International and Canadian standards.
- **A one-year warranty** against defects covers parts and labor.

Accessories / Options

Wellslok Extension Kit, designed for installation in countertops up to 1-1/2" thick, refer to installation instructions, 22593

Drain Valve Extension Kit, extension from drain to counter front with remote handle, for use with MOD-100TD only, 20385

Drain Screen, 21709

Optional 72" Wiring, thermostatically controlled warmers, priced per well, contact factory

Explanation of Built-In Warmer Suffixes:

TD.....thermostatically controlled/with drain
TDMthermostatically controlled/with drain/
 connected to drain manifold

4427N Salad Top: Front-Breathing Self-Contained Salad Top Refrigerated Bases

Models

- 4427N-6 Single section with doors, six pan capacity
- D4427N-6 Single section with drawers, six pan capacity
- 4427N-8 Single section with doors, eight pan capacity

4427N-6

Standard Features

- Patented air screen ensures product stays cold without drying it out
- All 4400 Series units are 100% front breathing, which allows the unit to be pushed against a wall or built into a cabinet or an existing line up
- Durable, rugged stainless steel sides, top and front
- Features Delfield's exclusive ABS interior (on sides). ABS is extremely durable - it won't dent, chip or corrode and is backed by a limited lifetime warranty
- Delfield supplies 1/6 size pans and positive placement adapter bars for top opening
- Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance. Not available for model 4427N-8
- Salad top refrigerators are standard with 10" wide, dishwasher safe polyethylene cutting board treated with antimicrobial agent
- "D" prefix models feature Delfield's new drawer system. Drawers are backed by a 10-year warranty on the track assembly
- Environmentally friendly R404A refrigerant
- High density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP

- (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane keeps energy costs low
- Black recessed quick grip handle
 - Standard on 5" casters for easy cleaning and installation
 - 6' cord and plug supplied
 - One epoxy coated wire shelf standard, installed per door section
 - ACT solid state electronic control
 - Three year parts and labor warranty and an additional two year compressor parts warranty

Options & Accessories

- Flat lift off cover
- 18" wide single tier overself
- Stainless steel finish on back
- Plastic laminate on front
- Additional wire shelves
- 3" casters, 3.75" ride height
- Door lock
- Exterior thermometer
- 220V/50 Hertz electrical system*

* Inclusion of this option will alter electrical specifications of the unit

Specifications

Exterior top is one-piece, 22-gauge stainless steel with integral 2.12" (5.4cm) square nosing on the front. Top of drawer unit has one opening to accept six 1/6-size 4" (10cm) deep pans. Top of door unit has one opening to accept six or eight 1/6-size 4" or 6" (10cm or 15cm) deep pans. Adapter bars and 1/6 size pans are supplied by Delfield. Lid is constructed of 20-gauge stainless steel. Temperature in top opening to maintain 33°F (1°C) to 41°F (5°C), with pans recessed 2.5" (6.4cm) at 86°F ambient room temperature, meeting NSF 7 requirements. One 27" x 10" x .5" (68.6cm x 25.4cm x 1.3cm) polyethylene cutting board treated with antimicrobial agent is mounted on the top at the front edge.

Dual level pan brackets allow the pans to be lowered an additional inch in the unit without tools to provide additional pan temperature holding performance. Not available for model 4427N-8.

Exterior back and bottom are two-piece 24-gauge galvanized steel. Exterior ends are stainless steel.

Interior sides are thermoformed ABS plastic with integral shelf supports. Base is fully insulated with high-density foamed in place environmentally friendly, Kyoto Protocol Compliant, Non ODP (Ozone Depletion Potential), Non GWP (Global Warming Potential) polyurethane.

Refrigeration system uses HFC-404A refrigerant. Compressor

is 1/5 H.P., with condenser coil and hot gas condensate evaporator mounted on rear of the cabinet. Evaporator coil is located on the interior rear wall of the cabinet. Refrigerant flow is controlled by a capillary tube. Cabinet maintains an interior cabinet temperature of 36°F to 40°F (2°C to 4°C).

ACT control: ACT electronic, solid state control, mounted on the exterior rear of the cabinet, allows unit to maintain precise temperatures in heavy duty conditions.

Electrical connection is 115 volt, 60 Hertz, single phase. Unit has a 6' (1.8m) long electrical cord and NEMA 5-15P plug.

Casters: Equipment is mounted on 5" (13cm) diameter plate casters with front two locking. Equipment clearance above the floor is 2.5" (6cm).

Doors have a 24-gauge stainless steel exterior, with thermoformed ABS plastic interior liner. Cabinet has one adjustable epoxy-coated wire shelf.

Drawers have 24-gauge stainless steel exterior with thermoformed ABS plastic interior liner. Drawer frames are 12-gauge stainless steel. Drawer slides are 11-gauge stainless steel with Delrin bearings. Top drawer holds one full size 12" x 20", 4"-6" (30.5cm x 50.8cm x 10.2cm) deep pan, and three 1/6 size pans. Bottom drawer holds one full size 12 x 20" and three 1/6 size 4" deep pans. Pans are supplied by others.

TRAY AND RACK DISPENSER

- STAINLESS STEEL
- CANTILEVER DESIGN
- SELF LEVELING, FIELD ADJUSTABLE

- MOBILE
- SINGLE OR DOUBLE

Model Series: TRC-M-*

APPLICATION:

- Cafeterias
- Serving lines
- Tray make-up systems
- Back up storage
- Modular buffet systems

CAPACITY:

- Trays: App 100 – 150 trays
- Racks: 5 to 6 racks per stack
- Baskets: 5 to 6 baskets per stack
- Above capacities doubled for double units

DISPENSES:

- Trays
- Chinaware in racks
- Chinaware in baskets

SPECIFICATIONS:

- Stainless steel; Type 304
- “Heliarc” and spot welded construction
- All seams fully welded & polished
- Channel reinforced extended base for rigidity and stability
- Dispensing system in a steel upright uni-frame enclosure
- Cantilever dispensing system
- Dispensers are equipped with non-rusting springs that are heat treated for strength & durability
- With easy off back panel for spring removal
- Wrap-around bumper
- Push handle on rear as standard
- 4 > 5” swivel, non-marking casters with 4 side brakes

OPTIONAL FEATURES [1]:

- NP - Stainless steel nameplate
- PP - Push posts on top of unit
(Handle is removed when adding push posts)
- Sealed casters for cart wash
- STD-F - Flat style overshelf
- 8CD - Cylinder style overshelf
- OS4 - 4 pan overshelf
- TG - Stainless steel tray guides
- Remove (*) from model code for non-NSF models

- Holds 4 ¼ size cutlery pans (pans not included)
- With NSF certified, hinged fold back cover
- Overall width of unit is 27 ½” (699mm)
- Overall height of unit is 53” (1346mm)

Model #: TRC-M-TG*

SPECIFICATIONS:

- Tray guides to assist in the positioning of non-stacking trays
- Stainless steel; Type 304
- “Heliarc” and spot welded construction
- Dimensions of unit as per charts

Options available on double units – refer to factory.

TRAY AND RACK DISPENSER

- STAINLESS STEEL
- CANTILEVER DESIGN
- SELF LEVELING, FIELD ADJUSTABLE

- MOBILE
- SINGLE OR DOUBLE

Model Series: TRC-M-*

APPLICATION:

- Cafeterias
- Serving lines
- Tray make-up systems
- Back up storage
- Modular buffet systems

CAPACITY:

- Trays: App 100 – 150 trays
- Racks: 5 to 6 racks per stack
- Baskets: 5 to 6 baskets per stack
- Above capacities doubled for double units

DISPENSES:

- Trays
- Chinaware in racks
- Chinaware in baskets

SPECIFICATIONS:

- Stainless steel; Type 304
- “Heliarc” and spot welded construction
- All seams fully welded & polished
- Channel reinforced extended base for rigidity and stability
- Dispensing system in a steel upright uni-frame enclosure
- Cantilever dispensing system
- Dispensers are equipped with non-rusting springs that are heat treated for strength & durability
- With easy off back panel for spring removal
- Wrap-around bumper
- Push handle on rear as standard
- 4 > 5” swivel, non-marking casters with 4 side brakes

OPTIONAL FEATURES [1]:

- NP - Stainless steel nameplate
- PP - Push posts on top of unit
(Handle is removed when adding push posts)
- Sealed casters for cart wash
- STD-F - Flat style overshelf
- 8CD - Cylinder style overshelf
- OS4 - 4 pan overshelf
- TG - Stainless steel tray guides
- Remove (*) from model code for non-NSF models

Glass Door Merchandiser:
Slide Door Refrigerator

* Shown with optional black exterior.

GDM-45

- ▶ The world's #1 manufacturer of glass door merchandisers.
- ▶ Oversized, factory balanced, refrigeration system holds 33°F to 38°F (.5°C to 3.3°C).
- ▶ Exterior - non-peel or chip white laminated vinyl; durable and permanent.
- ▶ Interior - attractive, NSF approved, white aluminum interior liner with stainless steel floor.
- ▶ Self closing doors. Counter-balanced weight system for smooth, even, positive closing.
- ▶ "Low-E", double pane thermal insulated glass door assemblies with mitered plastic channel frames. The latest in energy efficient technology.
- ▶ Entire cabinet structure is foamed-in-place using Ecomate. A high density, polyurethane insulation that has zero ozone depletion potential (ODP) and zero global warming potential (GWP).

Bottom mounted units feature

- ▶ "No stoop" lower shelf to maximize product visibility.
- ▶ Storage on top of cabinet.
- ▶ Easily accessible condenser coil for cleaning.

Glass Door Merchandiser: Slide Door Refrigerator

STANDARD FEATURES

DESIGN

- True's commitment to using the highest quality materials and oversized refrigeration systems provides the user with colder product temperatures, and lower utility costs in an attractive merchandiser that brilliantly displays packaged food and beverages.

REFRIGERATION SYSTEM

- Factory engineered, self-contained, capillary tube system using environmentally friendly (CFC free) 134A refrigerant.
- Extra large evaporator coil balanced with higher horsepower compressor and large condenser; maintains cabinet temperatures of 33°F to 38°F (.5°C to 3.3°C).
- Sealed, cast iron, self-lubricating evaporator fan motor(s) and larger fan blades give True merchandisers a more efficient low velocity, high volume airflow design. This unique design ensures faster temperature pull down of warm product, colder holding temperatures and faster recovery in high use situations.
- Bottom mounted condensing unit positioned for easy maintenance. "No stoop" lower shelf maximizes visibility by raising merchandised product to higher level.

CABINET CONSTRUCTION

- Exterior - non-peel or chip white laminated vinyl; durable and permanent.
- Interior - attractive, NSF approved, white aluminum liner with stainless steel floor.
- Insulation - entire cabinet structure is foamed-in-place using Ecomate. A high density, polyurethane insulation that has zero ozone depletion potential (ODP) and zero global warming potential (GWP).

- Welded, heavy duty steel frame rail, black powder coated for corrosion protection.
- Frame rail fitted with leg levelers.
- Illuminated exterior sign panel. Variety of sign options available.

DOORS

- "Low-E", double pane thermal insulated glass door assemblies with mitered plastic channel frames. The latest in energy efficient technology.
- Each door fitted with 12" (305 mm) long handle.
- Self closing doors. Counter-balanced weight system for smooth, even, positive closing.

SHELVING

- Eight (8) adjustable, heavy duty PVC coated wire shelves 22 15/16" L x 20 9/16" D (583 mm x 523 mm). Four (4) chrome plated shelf clips included per shelf.
- Shelf support pilasters made of same material as cabinet interior; shelves are adjustable on 1/2" (13 mm) increments.

LIGHTING

- Safety shielded fluorescent interior lighting.
- Cabinet lighting utilizes electronic ballast and T-8 bulbs for brighter illumination, longer bulb life and increased energy efficiency.

MODEL FEATURES

- Evaporator is epoxy coated to eliminate the potential of corrosion.
- See our website www.truemfg.com for latest color and sign offerings.
- Convenient clean-out drain built in cabinet floor.
- Listed under NSF-7 for the storage and/or display of packaged or bottled product.

ELECTRICAL

- Unit completely pre-wired at factory and ready for final connection to a 115/60/1 phase, 15 amp dedicated outlet. Cord and plug set included.

115/60/1
NEMA-5-15R

OPTIONAL FEATURES/ACCESSORIES

Upcharge and lead times may apply.

- 230 - 240V / 50 Hz.
- Black exterior.
- Stainless steel exterior.
- Black aluminum interior liner with black shelving.
- Stainless steel interior liner.
- 6" (153 mm) standard legs.
- 6" (153 mm) seismic/flanged legs.
- 2 1/2" (64 mm) diameter castors.
- 4" (102 mm) diameter castors.
- LED Lighting.
- Red wine thermostat.
- White wine thermostat.
- Chocolate thermostat.
- Barrel lock (factory installed).
- Ratchet locks.
- Wine racks.
- Additional shelves.
- TrueFlex gravity feed organizers.
- Remote cabinets (condensing unit supplied by others; system comes standard with 404A expansion valve and requires R404A refrigerant). Consult factory technical service department for BTU information. All remote units must be hard wired during installation.

5 Gallon Hot Water Machine

Features

5 Gallon Hot Water Machine

- Dispenses up to 18 gallons (68.14 litres) of boiling water (H5X) per hour for food prep and cleaning.
- Precise temperature (72°–212°F) (22.2°C-100°C) ensures consistent, high quality results.
- Locate hot water at preparation site to increase speed, safety and efficiency of kitchen staff.
- Prepare large amounts of mashed potatoes, gravy, cheese sauce, gelatin, oatmeal, and many more foods.
- International electrical configurations available.

Fresh Mix Dispenser with 3 Hoppers

PROJECT _____

DATE _____

Model FMD-3
 Dimensions: 30"H x 11.3"W x 23.3"D
 (76.2 cm H x 28.7 cm W x 59.2 cm D)

Features

Fresh Mix Dispenser

- Variable speed motors allow control of product consistency in mixing chamber (.75 to 6.6 grams of powder per second).
- Lighted front graphics for merchandising are easy to exchange: cappuccino or soup.
- Attractive high-impact resin door is dent and scratch resistant. Black finish or stainless with black door.
- Large easy-to-fill translucent hoppers hold 4 lbs. (1.81 Kg) of product each, ensuring quick and timely refilling.
- High speed heavy-duty whipper for complete product mixing.
- Improved automatic rinsing of whipper reduces run-on after beverage is dispensed.
- Adjustable legs and drip tray accommodate 20 oz. (.59 liter) mugs easily.
- Electrical and plumbing components easily accessible through front and top.
- International electrical configurations available.

Model FMD DBC-3
 Dimensions: 30"H x 11.3"W x 23.3"D
 (76.2 cm H x 28.7 cm W x 59.2 cm D)

FMD DBC Dispensers

- Easy-to-program, one-touch portion control for 3 or 4 cup sizes.
- Fast fill perfect for quick service restaurants.
- Each mixing chamber has independent powder to water ratio.
- System setup is password protected for safety.
- Simple setup and hopper throw calibration system.
- 4 - Cup model includes programmable Mocha feature allowing four additional cup sizes per flavour.

Model FMD DBC-3 4 CUP
 Dimensions: 30"H x 11.3"W x 23.3"D
 (76.2 cm H x 28.7 cm W x 59.2 cm D)

Model FMD-3 available with optional Cafe Display

*Power cord (NEMA 5-15P) 15 Amp-120V machine only. † Power cord (NEMA L14-20P) 120/240 V machine only.

**Based on incoming water temperature of 50°F.

Note: SS=stainless steel cabinet with black door, BLK=black decor.

Electrical: 120V model requires 2-wires plus ground service rated 120V, single phase, 60 hz. 120/240V model requires 3-wires plus ground service rated 120/208 or 120/240V, single phase, 60Hz.

Plumbing: 20-90 psi (138-621 kPa) from a 3/8" (10 mm) or larger supply line. A shut-off valve should be installed in the line before the unit. Install a regulator in line when pressure is greater than 90 psi to reduce it to 50 psi. Supplied with 1/4" (6.4 mm) male flare fitting.

TRAY AND RACK DISPENSER – DROP-IN

- STAINLESS STEEL
- DOUBLE SPRING BANK MECHANISM
- SELF LEVELING, FIELD ADJUSTABLE
- SINGLE UNIT
- UNHEATED

MODEL SERIES: TRD-D/I-

APPLICATION:

- Cafeterias
- Serving lines
- Serving stations
- Mobile salad servers
- May be used in refrigerated cabinets

DISPENSES:

- Trays
- Chinaware in racks
- Chinaware in baskets

SPECIFICATIONS:

- Stainless steel, type 304, #4 finish on all exterior surfaces.
- Heli-arc and spot welded construction.
- Die formed uni-frame assembly with upright support channels.
- Double spring bank dispensing system with roller bearings fit into guide runners for smooth operation.
- Unit is removable.

OPTIONAL EQUIPMENT: (Specify when ordering)

- Unit enclosed all around.

AMSCO® ELECTRIC STEAM GENERATORS - CES SERIES

APPLICATION

Amsco Electric Steam Generators (CES Series) provide the high-quality (97%-vapor quality) steam needed to power equipment such as sterilizers, water stills, utensil sanitizers and water temperature boosters for washing equipment. They provide a steam source when in-house supply is not available, when an emergency standby is required, or when a remote location needs to be served.

When a deionized, distilled or reverse osmosis water supply (min. resistivity of 1 megohm/cm) is available, stainless steel generators can also be used to supply pure steam.

(Typical - details may vary.)

CONSTRUCTION

STERIS furnishes all components necessary to obtain a complete working unit, ready for (but not including) installation and connection to the building utility service lines and the equipment to be powered.

Heating Section

The pressure vessel is ASME Grade carbon steel rated for 100 psig. If selected, 316L stainless steel can be supplied for use with deionized, distilled or reverse osmosis water.

STANDARDS

Generator meets the applicable requirements of the following standards:

- **American Society of Mechanical Engineers Code**, Section I, Part PMB for power boilers and is so stamped
- **Underwriters Laboratories Incorporated**
- **Canadian Standards Association** listings

- **Seismic pre-approval**; meets Zone 4 when installed according to the installation instructions.

FEATURES

Openings are provided for water inlet, drain, steam outlet, gauges, instrumentation and immersion type heating elements.

The entire heating section is insulated with two inch thick glass fiber.

The Selections Checked Below Apply To This Equipment

GENERATOR RATING (KW)

- 30 75 150
 40 100 180
 60 120

CONSTRUCTION

- 316L Stainless Steel
 Carbon Steel

ELECTRICITY*

- 208 V, 3 Phase 240 V, 3 Phase 480 V, 3 Phase
 380 V, 3 Phase 415 V, 3 Phase 600 V, 3 Phase

* Other voltages are available on special order.

Item _____

Location(s) _____

The flanged heaters include .427" diameter incolloy 800 tubular elements rated 105 W/in² brazed into heavy duty ASME flanges. Each element consists of 80% nickel, 20% chromium resistance wire surrounded by high density magnesium oxide insulation. The elements are repressed to ensure high density compression of all bends.

The heaters are individually fused for 208, 240, or 480 Volt, 50/60 Hz, 3-phase operation as selected.*

Automatic controls operate on 120 Volt, 50/60 Hz electric service. Operation of the generator is automatic. Standard components include:

- **Flush system** - the generator's heating section can be manually flushed. Review local codes before flushing generator.
- **Water-level control** - energizes the water pump and supply valve to ensure proper water level in the drum. This system uses a bronze or stainless steel, positive displacement pump, with drive motor wired for operation on 120 Volt, 50/60 Hz electric service. Motor has automatic overload protection. In addition, it shuts off power to the heaters if water in the heating section should fall below a preset level. System supply valve withstands hydrostatic test of 300 psig (21.2 kg/cm²) and has a brass or stainless steel body; non-magnetic, stainless-steel trim and dual electromagnetic coil are included. A water-level sight gauge with upper and lower hand-valve shutoffs is provided. Sightglass valves are equipped with ASME rated automatic shutoff if the sight gauge glass should break.
- **Steam pressure controls** - generators are supplied with operating and high limit pressure controls. One (two for 100-180 kW units) is used for controlling the operating pressure of the generator (0-90 psi adjustable operating range) while the other is used as a high limit pressure control, and incorporates a manual reset.

* Other voltages are available upon special order.

- **Electric door interlock** - interrupts the 120 V control circuit whenever the generator's main electrical door panel is opened.
- **Auxiliary low water cut-off** - a safety backup protection that turns off the power to the heating element(s) in the event of a low water level control failure.
- **Water sensing system** - if an equipment malfunction occurs and the outlet should fill with water, the water sensing system closes the steam outlet, preventing liquid from entering service lines to user devices. The system also activates a visual alarm, alerting operator of malfunction.

The boiler is fully insulated and equipped with a steel jacket having a baked enamel finish. Plumbing and control devices are copper alloy or stainless steel.

The boiler is equipped with an ON-OFF control switch and pilot light.

If **stainless steel construction** is selected, all components in contact with feedwater and steam are 316L stainless steel or equal.

PERFORMANCE CAPABILITIES

Electric steam generators can provide the high pressure steam (90 psig max.) required for either single or multiple equipment arrangements. Available models are listed in Engineering Data, next page.

NOTES

1. Pipe sizes shown indicate terminal outlets only. Building service lines, provided by others, must supply the specified pressures and flow rates.
2. STERIS recommends supplying hot water at 140°F (60°C) (maximum 150°F [65°C]) to the generator to minimize heat-up time and conserve electricity; cold water at 70°F (21°C) may be substituted, but only with sacrifice of heat-up time. For proper boiler operation and

reasonable element life, STERIS recommends the feed water quality be controlled within the following parameters:

For Carbon Steel Generators

Condition	Nominal Conditions	Max. Conditions
Temperature	as supplied	150°F (65°C)
Total Hardness as CaCO ₃ *	0-17 mg/L	17 mg/L
Total Dissolved Solids	50-150 mg/L	250 mg/L
Total Alkalinity as CaCO ₃	50-100 mg/L	180 mg/L
pH	6.8-7.5	8.5
Total Silica	0.1-1.0 mg/L	2.5 mg/L
Resistivity - ohms/cm**	2000-6000	26000

For Stainless Steel Generators:

requires deionized, distilled or reverse osmosis water with minimum resistivity of 1 megohm/cm. Do not connect tap water to stainless steel generators. Use of water not meeting the required feedwater quality will invalidate the warranty and is a violation of ASME Boiler Codes.

3. Clearances shown are minimal for installing and servicing the equipment.
4. Disconnect switches (by others) should be installed in electric supply lines near the equipment. Water in and steam out lines should also be equipped with independent shut-off valves.
5. STERIS recommends that steam generating equipment be maintained and operated in an area where temperature does not exceed 100°F (38°C).
6. Other voltage specifications are available through special order.

* 17.1 mg/L = 1 grain hardness

** **WARNING - BURN HAZARD:** Sterilizer operator may be severely burned by scalding water if the water level control malfunctions. The steam generator level control may malfunction if the supply water exceeds 26,000 ohms/cm (38.5 micro-mhos conductivity min.). Do not connect to treated water (e.g., distilled, reverse osmosis, deionized) unless water resistivity is determined to be acceptable. If water exceeds 26,000 ohms/cm, contact STERIS Engineering Service for information concerning modifications required to the generator control system.

UTILITY REQUIREMENTS

Waste (W)

For 30 to 180 kW generators:
1" NPT.

Hot Water (HW)

1/2" NPT; 20 to 50 psig (1.41 to 3.52 kg/cm², dynamic); 140°F (60°C) minimum - see Note 2.

Steam Outlet (S)

For 30 to 75 kW generators:
3/4" NPT; for 100 to 180 kW
Generators: 1" NPT.

Electrical (E1)

30 to 40 kW generators: 208,
240, or 480 Volt, 3-Phase, 50/60 Hz.

Electrical (E2)

60 to 180 kW generators: 208, 240,
or 480 Volt, 3-Phase, 50/60 Hz.

Electrical (E3)

120 Volt, 15 Amp, 1-Phase 50/60 Hz
service for control and pump motor.

Ready AAMI COMPLIANT Sets THREE 25-POUND SETS Go IMMEDIATE-USE

The New AMSCO® 400 Series Small Steam Sterilizer.

Compliant. Larger capacity. Immediate-use.

Ready to keep pace with life in any surgical environment.

Compliant. Larger capacity. Ready for immediate-use.

Compliant

- AAMI-ST8:2008
- AAMI-ST79:2010

Processes up to three 25-lb. sets

- Increased shelf clearance allows processing of larger ortho and bariatric sets and large retractors
- Requires no additional floor space

Model	Size	Type	Load
400 Series 16	16 x 16 x 26"	Prevac	2 trays/4 fabric
400 Series 20	20 x 20 x 38"	Prevac	3 trays/6 fabric
400 Series 16S	16 x 16 x 26"	SFPP	2 trays/4 fabric
400 Series 20S	20 x 20 x 38"	SFPP	3 trays/6 fabric

Customizable cycles/cycle names Variety of pre-programmed cycles

DART Warm-up	270°F (132°C)	3 Min.	1 Min.

* 16S and 20S units only

Safe, intuitive operation

- Hands-free, foot-activated door
- One-touch control with security access code
- Simple programming; customizable cycle names
- Control/countdown screen visible from 15'
- Display messages in complete phrases
- Ink-on-paper impact printer
- Controls at eye level for easy access
- Programmable utilities startup/shutdown
- Water-saving temperature control

Adaptable configurations

- Single Door
- Double Door
- Cabinet Enclosed/Freestanding
- Recessed
- House Steam
- Integral Steam Generator with Flush and Drain
- 208 Volts
- 240 Volts
- 480 Volts

Reliably engineered

- Non-lubricated, steam-activated door gasket with two-year warranty
- Teflon-sleeved shelves with up to 18" clearance
- Easy access modular piping
- Fully jacketed pressure vessel
- 316 L stainless steel construction
- 15-year chamber warranty

Accessories

- Rack/Shelves (16" and 20" units)
- Loading Car/Transfer Carriage (20" only)
- Seismic Tie-Down Kit

APPLICATION

AMSCO 400 Series Small Steam Sterilizers are designed for sterilization of materials used in healthcare facilities.

The sterilizer is designed for fast, efficient sterilization of heat- and moisture-stable materials in addition to sterilization of items for immediate use. AMSCO 400 small sterilizers are equipped with prevacuum, gravity, leak test and daily air removal test cycles. An optional Steam Flush Pressure Pulse (SFPP) configuration sterilizer adds SFPP cycles.

Each sterilizer is equipped with either a single or double door, for open or recessed mounting.*

* Recess mounting is not available for 16 x 16 x 26" (406 x 406 x 660 mm) double door sterilizers.

DESCRIPTION

AMSCO 400 Series Small Steam Sterilizers are the next advancement in the STERIS line of steam-jacketed sterilizers and are equipped with the latest features in both state-of-the-art technology and ease of use.

Primary Product Features

AMSCO 400 control system with enhanced functionality and user-friendly interface screen.

- Touch-sensitive screen with 30-line x 40-character display area
- Ink-on-paper impact printer
- Help screens for programming and troubleshooting alarm conditions
- Automatic check of control program and cycle data maintains process integrity
- Service reprogrammable flash ROM memory

Vertical sliding door with hands-free loading and unloading capability.

(Typical – details may vary.)

- Foot pedal activated door opening and closing
- Non lubricated, steam-activated door seal
- Modularized vessel and piping** for increased dependability and reduced servicing time.
 - Reduced piping components increase reliability
 - Emergency manual exhaust valve
 - Electronic water saving control

The Selections Checked Below Apply To This Equipment

Size/Type

- 16 x 16 x 26", Prevacuum with Liquid Cycle
- 20 x 20 x 38", Prevacuum with Liquid Cycle
- 16 x 16 x 26", SFPP and Prevacuum with Liquid Cycle
- 20 x 20 x 38", SFPP and Prevacuum with Liquid Cycle

Steam Source

- Building Steam
- Electric Steam¹
 - 208 Volts
 - 240 Volts
 - 480 Volts

Doors

- Single Double

Single Door Mounting

- Cabinet Enclosed/Freestanding
- Recessed

Double Door Mounting

- Recessed through One Wall
- Recessed through Two Walls²

Remote Monitoring

- ProConnect® Response Center (Remote Monitoring, Priority Technical Support, Customer Care Center Access, Equipment Performance Reports)

¹ 16 x 16 x 26" Double Door Sterilizers are not available with electric steam generator.

² Available for 20 x 20 x 38" Double Door Sterilizers only.

Accessories

- Loading Rack and Two Shelves 20 x 20 x 38" (standard on 16 x 16 x 26" sterilizers)
 - Single Door Double Door
- One Intermediate Shelf
 - 16 x 16 x 26" sterilizer
 - 20 x 20 x 38" sterilizer
- Loading Car (20 x 20" units only)
- Transfer Carriage (20 x 20" units only)
- Chamber Track Assembly (20 x 20" units only)
 - Single Door Double Door
- Loading Car, Transfer Carriage, and Track Assembly (20 x 20" units only)
 - Single Door Double Door
- Seismic Tie-Down Kit

Item _____

Location(s) _____

Interior Chamber Dimensions

- 16 x 16 x 26" (406 x 406 x 660 mm)
- 20 x 20 x 38" (508 x 508 x 965 mm)

STANDARDS

Each sterilizer meets applicable requirements of the following listings and standards, and carries the appropriate symbols:

- **ANSI/UL 61010-1**—Standard for Electrical Equipment for Measurement, Control, and Laboratory Use, Part 1: General Requirements
- **ANSI/UL 61010A-2-041**—Standard for Electrical Equipment for Measurement, Control and Laboratory Use, Part 2: Particular Requirements for Autoclaves using Steam for the Treatment of Medical Materials and Laboratory Processes
- **ANSI/AAMI-ST8:2008** "Hospital Steam Sterilizers" American National Standard
- **ASME Code, Section VIII, Division 1** for unfired pressure vessels. The pressure vessel is so stamped; ASME Form U-1 is furnished. Shell and door are constructed to withstand working pressure of 50 psig (344.7 kPa).
- **ASME Code, Section I, Part PMB** for power boilers, if optional steam generator is supplied.

FEATURES

Rack and shelf design accepts wider loads:

16 x 16" sterilizers – chamber clearance is 12" (304 mm) for intermediate shelves, and 14" (357 mm) for bottom shelf.

20 x 20" sterilizers – chamber clearance is 18" (457 mm) for intermediate shelves, and 15" (381 mm) for bottom shelf.

User-programmable cycle names allow for load specific naming of cycles. These cycle names are displayed and printed in addition to the factory-default cycle type and aid in identifying the proper cycle to be used with a specific load.

Hinged front cabinet panel fully opens for convenient access to sterilizer piping and control.

Software calibration is performed in the Service Mode, accessible through the touch screen displays, and accomplished using external or internal temperature and pressure sources. Control system provides printed record of all calibration data for verification to current readings.

Lighted DIN connectors are installed on all steam, water and exhaust valves for reliability and ease of maintenance.

Steam generator units are equipped with **an automatic flush and drain system**. This system helps the generator to operate at peak performance and extends the life of the heaters.

ProConnect® Response Center - Minimize response time and minimize unscheduled downtime on your equipment. Secure, internet-based, 24/7 remote monitoring enables both Predictive Maintenance as well as instant alert to STERIS when there is an equipment alarm. Also included are priority technical support, online parts ordering, equipment performance dashboards and scheduling service at eservice.steris.com.

UTILITIES CONSERVATION FEATURES

Resistance Temperature Detectors (RTD) are installed for sterilizer temperature control. The chamber drain line RTD senses and controls temperature variations within the sterilizer chamber. A jacket RTD provides temperature control within the jacket space. These RTD signals, converted into electrical impulses, provide accurate control inputs and readouts throughout entire cycle and minimizes utilities usage.

Electronic water saving control includes a condenser RTD to control the amount of water used in condensing the exhausted chamber steam. Control software minimizes amount of water used to cool condensate.

Automatic utilities startup/shutdown may be programmed to activate at the end of any designated cycle or time of day. When activated, control system automatically shuts off all utility valves, conserving steam and water usage. Sterilizer utilities can be restarted either by programmed time or manual operation. A different shutdown and restart time can be programmed for each day.

One-piece insulation sleeve is fitted around exterior of the sterilizer vessel. The sleeve is sealed and held in place by hook-and-loop closures. Fiberglass insulation is asbestos-free and chloride-free. Insulation outer shroud is impregnated with silicone to aid in resisting oil or water and conserves system heat.

PROCESSING CYCLES

All cycles validated to AAMI standard ST8:2008.

Prevacuum Sterilizer Models feature the following cycles:

Immediate Use, Prevac Cycle (4-minute exposure): Cycle type is for sterilizing porous and non-porous loads. Examples – A single unwrapped instrument tray or up to a full load of unwrapped instrument trays, each with a maximum weight of 25 lbs (11 kg).

» Sterilize exposure temperature: 270°F (132°C)

» Sterilize exposure time: 4 minutes

» Dry time: 1 minute

NOTE: Items sterilized for immediate use must be used within the shortest possible time after removal from the sterilizer and must be taken to the sterile field using aseptic transfer protocols.

- *A sterilized item intended for immediate use must not be stored.*
- *An item sterilized for immediate use cannot be held for use on a future case.*
- *The Prevac immediate use cycle is the preferred immediate use cycle. The Gravity immediate use cycle is only safe for simple instruments that contain no hinges or other features that could trap air.*
- *Always refer to instrument manufacturer's instructions for use to determine processing requirements.*

Prevac Cycle (4-minute exposure): Cycle type is for sterilizing porous and non-porous loads. Example – Wrapped 25 lb (11 kg) instrument tray(s) or fabric packs.

» Sterilize exposure temperature: 270°F (132°C)

» Sterilize exposure time: 4 minutes

» Dry time: 30 minutes (full load of instrument trays), 20 minutes (full load of fabric packs) or 5 minutes (Customer option, for a single fabric pack)

Prevac Cycle (3-minute exposure): This cycle is for sterilizing porous and non-porous loads. Example – Wrapped 25 lb (11 kg) instrument trays.

» Sterilize exposure temperature: 275°F (135°C)

» Sterilize exposure time: 3 minutes

» Dry time: 30 minutes

Immediate Use, Gravity Cycle (3-minute or 10-minute exposure): Cycle type is for sterilizing non-porous loads. Example – A single unwrapped instrument tray or up to a full load of unwrapped instrument trays, each with a maximum weight of 25 lbs (11 kg).

- » Sterilize exposure temperature: 270°F (132°C)
- » Sterilize exposure time: 10 minutes or 3 minutes
- » Dry time: 1 minute

See *Note* on previous page regarding immediate use.

SFPP Sterilizer Models also feature the following cycles (in addition to those found on Prevacuum models):

SFPP Cycle (4-minute exposure): This cycle is for sterilizing porous and non-porous loads. Example – A wrapped 25 lb (11 kg) instrument tray.

- » Sterilize exposure temperature: 270°F (132°C)
- » Sterilize exposure time: 4 minutes
- » Dry time: 30 minutes (full load of instruments trays), 20 minutes (full load of fabric packs) or 5 minutes (Customer option, for a single fabric pack)

SFPP Cycle (3-minute exposure): This cycle is for sterilizing porous and non-porous loads. Example – A wrapped 25 lb (11 kg) instrument tray.

- » Sterilize exposure temperature: 275°F (135°C)
- » Sterilize exposure time: 3 minutes
- » Dry time: 30 minutes.

OPTIONAL CYCLES:

The following cycles appear on Prevac and SFPP sterilizers, and can be programmed by the departmental supervisor:

Gravity Cycles:

Full load, non-porous instrument trays.

- » Sterilize exposure temperature: 270°F (132°C)
- » Sterilize exposure time: 15 minutes
- » Dry time: 30 minutes

Full load, non-porous instrument trays.

- » Sterilize exposure temperature: 250°F (121°C)
- » Sterilize exposure time: 30 minutes
- » Dry time: 30 minutes

Full load, fabric packs.

- » Sterilize exposure temperature: 270°F (132°C),
- » Sterilize exposure time: 25 minutes
- » Dry time: 15 minutes

Full load, fabric packs.

- » Sterilize exposure temperature: 250°F (121°C)
- » Sterilize exposure time: 30 minutes
- » Dry time: 15 minutes

Liquid Cycle: This cycle is used for sterilizing liquids in borosilicate containers with vented closures. The 16" sterilizer can process a maximum load of 15 1000 mL containers. The 20" sterilizer can process a maximum load of 32 1000 mL containers.

- » Sterilize temperature: 250°F (121°C)
- » Factory programmed sterilize time: 45 minutes
- » Dry time: not applicable

Important: The liquid cycle is for non-patient contact use only.

PREVACUUM TESTING CYCLES

- **Vacuum Leak Test:** This cycle is used for testing the vacuum integrity of the sterilizer's piping. Sterilizer chamber must be empty while running this test cycle. Temperature: 270°F (132°C); all timing is preprogrammed and cannot be adjusted. This cycle is validated to AAMI standard ST8:2008.
- **DART® (Bowie-Dick) Test Cycle:** This cycle is used to conduct a Bowie-Dick test on the sterilizer. Recommended load is a STERIS Dart® pack, or a properly prepared Bowie-Dick test pack. Sterilize exposure temperature: 270°F (132°C); sterilize exposure time: 3-1/2 minutes; dry time: 1 minute. This cycle is validated to AAMI standard ST8:2008.

CONTROL SYSTEM

Design Features

AMSCO 400 control system monitors and controls all sterilizer operations and functions. The control system is factory-programmed with standard sterilizing cycles. Each cycle is adjustable, and cycle names are user-programmable, to meet specific processing requirements. All control configuring is performed through the touch screen displays.

Important: Always refer to instrument manufacturer's instructions for use to determine processing requirements.

Cycle values and operating features may be adjusted and verified prior to cycle operation. Once cycle is started, cycles and cycle values cannot be changed until cycle is complete. On completion of cycle, timers reset to the previously selected values, eliminating the need to reset values between repeated cycles. If chamber temperature drops below set point during the exposure phase, the timer stops and automatically resets once normal operating temperature is reached.

Critical control system components are housed within a compartment to protect the components from moisture and heat generated during sterilization. A cooling fan with filter maintains air flow within the compartment, keeping components cool.

Operator interface control panel, consisting of a touch screen and impact printer, is located on the operating (load or nonsterile) end of the sterilizer. If sterilizer is equipped with double doors, an additional touch screen is provided on the sterilizer's non-operating (unload or sterile) end.

- **Touch-Sensitive Screen** features a 30-line x 40-character graphics display. The control's touch screen color display features a wide viewing angle and high-visibility backlighting. All sterilizer functions, including cycle initiation and cycle configuration, are operated by pressing the touch-sensitive areas on the display, referred to as *buttons*. Display indicates appropriate control buttons, operator prompts, and status messages necessary to assist in sterilizer operation. All displayed messages are complete phrases with no codes to be cross-referenced. Display also indicates any abnormal conditions that may exist either in or out of a cycle.
- **Ink-On-Paper Impact Printer**, located near touch screen, provides an easy-to-read printed record of all pertinent cycle data. Data is automatically printed at the beginning and end of each cycle and at transition points during the cycle. Printer take-up spool stores an entire roll of paper, providing cycle records which can be saved for future reference. Three paper tape rolls are furnished with each unit.

Typical Touch Screen Display

Non-operating end (NOE) control panel, equipped on double-door sterilizers only, includes a touch-sensitive screen similar to the operating end screen. Preprogrammed cycles can be started from the NOE control panel. Display concurrently shows the same information as the operating end screen display.

Cycle configuration is performed by accessing the Change Values menu through the operating end touch screen. In addition to adjustment of cycle values, the following operating parameters can also be changed through the Change Values menu:

- **Time Display and Printout Units** – Standard AM/PM or 24-hour.
- **Access Code** – accessing Change Values menu causes display to request the entry of an access code. If access code is not properly entered, display returns to menu screen, denying user access to the sterilizer programming. Supervisors can allow operators to change chosen cycle and parameters; or lock them out from making any changes.
- **Audible Signals** – are adjustable. **Touch pad** and **end-of-cycle signals** can be adjusted to one of four sound levels (off, low, medium or high) as required for the operating environment. **Alarm signal** can be adjusted to low, medium or high (it cannot be turned off).
- **Print Format** – allows selection of either a full or condensed printout of the cycle information during processing.
- **Temperature Display and Printout Units** – Fahrenheit (°F) or Celsius (°C). Temperature is set, displayed, controlled and printed to the nearest 0.1°. Recalibration is not required when changing temperature units from °F to °C and vice versa.
- **Pressure/Vacuum Display and Printout Units** – psig/In Hg, millibar or psia. Recalibration is not required when changing pressure units.
- **Utilities Control** – This parameter permits the operator to program the sterilizer to automatically shut off its steam and water at the end of the work day, to conserve utilities. It also allows control for shut down and power-up of an integral steam generator.
- **Languages** – This parameter can be used to select English, French or Spanish as the default for displays and printouts. The sterilizer can also be set to allow quick changes between available languages.
- **Machine Number** – This parameter assigns a six-character, alphanumeric code to the sterilizer. This code appears in the heading of all printouts.

- **Automatic Duplicate Print** – Sterilizer can be set to automatically furnish a duplicate printout of each cycle at the end of the cycle. First line reads "DUPLICATE PRINT".

Technical Data

Control system consists of a microcomputer control board and peripheral function circuit boards, located within the control board housing behind the front cabinet service panel above the chamber.

A memory backup system maintains cycle settings indefinitely and current cycle information for approximately five days. If a power failure occurs during a cycle, the battery backup system ensures that cycle memory will be retained and proper cycle completion will occur once power is restored. When power is lost, the cycle is held in phase until power is restored, exceeding the minimum government specification of one minute. Once power returns, the event is recorded on the printout and the cycle automatically resumes or restarts, depending on what phase the cycle was in at the time of power loss. If necessary, the operator can manually abort the cycle.

SAFETY FEATURES

Control senses when door seal is closed and sealed, preventing cycle start until a limit switch signal is received. If control loses appropriate signal during cycle, alarm activates, cycle aborts and chamber safely vents with a controlled exhaust.

Chamber Float Switch activates alarm, aborts cycle, and safely vents chamber with a controlled exhaust if excessive water is detected in the vessel chamber.

Pressure Relief Valve limits the amount of pressure buildup so that the rated pressure in the vessel is not exceeded.

CONSTRUCTION

Shell Assembly

Two fabricated Type 316L stainless-steel shells, welded one within the other, form the sterilizer vessel. Type 316L stainless-steel end frame(s) is welded to door end. On single door units, back of chamber is fitted with welded, 316L stainless-steel formed head.

Sterilizer vessel is ASME rated at 50 psig (3.5 bar) and insulated. Vessel (20 x 20" [508 x 508 mm] units only) includes one 1.0"-NPT welded chamber bushing for Customer use.

Steam-supply opening inside the chamber is shielded by a Type 316L stainless-steel baffle.

Chamber Door(s)

Door is constructed of a single formed piece of Type 316L stainless steel.

During cycle operation, door is sealed by a steam-activated door seal. Door seal is constructed of a special long-life rubber compound. When sterilizer cycle is complete, the seal retracts under vacuum into a machined groove in the sterilizer's end frame. Door seal can be manually retracted to open door and remove critical load in emergency situation if loss of vacuum or loss of power occurs.

Door is suspended by cables attached to a counterweight. Chamber door is opened (lowered) and closed (raised) by pressing a foot pedal located on the same end as the door being operated. In case of a power or mechanical failure, door can be operated manually.

A long-life proximity switch is used by the control to determine if door is closed. An additional seal pressure switch prevents inadvertent cycle initiation if door is not sealed.

The door assembly is equipped with a mechanical locking mechanism that ensures the door cannot be opened as long as the seal is intact and energized and more than 2.0 psi pressure is in the chamber.

The sterilizer door opening is fitted with a textured thermoplastic bezel. This bezel insulates the operator from the chamber end ring, lessening the chance of accidental contact with a hot metal surface.

Chamber Drain System

Drain system is designed to prevent pollutants from entering into the water-supply system and sterilizer. The automatic condensing system converts chamber steam to condensate and disposes condensate to waste. Cooling water flow is regulated by the waste line RTD to minimize water usage. Water supply shutoff valve is located behind the front cabinet service panel under the chamber.

Vacuum System

Water ejector reduces chamber pressure during prevacuum and post-drying phases. Air is drawn from chamber through the vacuum system. Following dry phase, chamber vacuum is relieved to atmospheric pressure by admitting air through a bacteria-retentive filter.

Steam Source

Sterilizers are piped, valved and trapped to receive building-supplied steam delivered at 50 to 80 psig (3.5 to 5.6 bar) dynamic. If building steam source is not available, an electric carbon-steel steam generator may be provided to supply steam to the sterilizer. Steam piping is constructed of brass and includes a shutoff valve, steam strainer, flush system and a brass pressure regulator.

Piping

All piping connections terminate within the confines of the sterilizer and are accessible from front and side of sterilizer.

- **Solenoid Valves** in the manifold with DIN connectors simplify sterilizer piping and can be serviced individually.
- **Manual Shutoff Valves** are pressure rated at 125 psig (8.62 bar) for saturated steam. Valve handles are low-heat conducting.

MOUNTING ARRANGEMENT

Sterilizers are arranged for either freestanding or recessed installation, as specified. Each sterilizer is equipped with a height-adjustable, steel floor stand. Sterilizer subframe is equipped with a synthetic rubber gasket to ensure tight fit between the cabinet panels on freestanding units or between the front cabinet panel and wall partition on recessed units.

On freestanding units, stainless-steel side panels and a louvered top panel enclose the sterilizer body and piping.

ACCESSORY

Seismic Tie-Down Kit - conforms to 2010 California Building Code of Regulations, Part 2.

PREVENTIVE MAINTENANCE

A global network of skilled service specialists can provide periodic inspections and adjustments to help ensure low-cost

peak performance. STERIS representatives can provide information regarding annual maintenance agreements.

NOTES

1. The sterilizer is not supplied with a vacuum breaker or backflow preventer and, where required by local codes, installation of such a device in the water line is not provided by STERIS.
2. Pipe sizes shown indicate terminal outlets only. Building service lines (not provided by STERIS), must supply the specified pressures and flow rates.
3. Disconnect switches (with OFF position lockout only; not provided by STERIS) should be installed in electric supply lines near the equipment.
4. Access to the recessing area from the control end of the sterilizer is recommended.
5. Clearances shown are minimal for installing and servicing the equipment.
6. If loading car and carriage are to be used with a 20 x 20 x 38" (508 x 508 x 965 mm) sterilizer, front clearance should be at least 76" (1930 mm). This will permit complete withdrawal of the loading car from the chamber and allow convenient maneuverability of the transfer assembly to and from the sterilizer.
7. Floor drain should be provided within confines of sterilizer framework.

UTILITY REQUIREMENTS

Sterilizer Using House Steam

Steam – 1/2" NPT, 50 to 80 psig (3.5 to 5.6 bar) dynamic, 97 to 100% vapor quality.

Drain – 1-1/2" ODT drain terminal. (Floor drain capacity must handle peak water consumption; refer to Engineering Data.)

Electrical - Controls – 120 Volt, 50/60 Hz, 1-phase, 2.0 Amps

Sterilizer Feed Water – 1" NPT, 30 to 50 psig (2.1 to 3.5 bar) dynamic.

Minimum 40 psig (2.8 bar) for SFPP sterilizers.

Water is used for ejector (creating chamber vacuum), exhaust cooling and cooling the generator drain. Refer to **Table 1** for recommended water quality. Use of feed water within the nominal conditions will optimize equipment performance and reduce maintenance.

NOTE: Backflow prevention (not supplied on unit) is not provided by STERIS.

Sterilizer Equipped with Integral Carbon Steel Steam Generator

Every AMSCO 400 sterilizer equipped with an electric steam generator includes an automatic flush and drain package.

Drain – 1-1/2" ODT drain terminal. (Floor drain capacity must handle peak water consumption; refer to Engineering Data.)

Generator Drain – 1/2" ODT

Electrical - Controls – 120 Volt, 50/60 Hz, 1-phase, 9.5 Amps

Electrical - Generator

208 Volt, 50/60 Hz, 3-phase

83.2 Amps; 240 Volt, 50/60 Hz

3-phase, 72.2 Amps; or 480 Volt

50/60 Hz, 3-phase, 37 Amps

Sterilizer Feed Water – 1.0" NPT, 30 to 50 psig (2.1 to 3.5 bar) dynamic. Refer to **Table 1** for water specification guidelines.

Steam Generator Feed Water – 1/2" NPT, 20 to 50 psig (1.4 to 3.5 bar) dynamic. Refer to **Table 2** for required water quality. Use of feed water within the nominal conditions will optimize equipment performance and reduce maintenance.

NOTE: Backflow prevention (not supplied on unit) is not provided by STERIS.

Telecommunications Requirements for ProConnect® Response Center

- An active wired or wireless TCP/IP network, 10/100BaseT Ethernet connection at each piece of connected equipment, Internet access and an IP address on the facility network.
- 5 GB of available hard drive space to run the service agent. Can be installed on:
 - » Dedicated PC running Windows XP or Windows 7 (32-bit mode only) with 2.8GHz processor, 512MB of RAM
 - » Virtual Machine
 - » Server
- Local STERIS login at the PC with a username of STERIS and the password should be ProConnect (STERIS Customer Number).
- Ethernet cable to connect each piece of STERIS equipment and the dedicated PC to the facility network.

CUSTOMER IS RESPONSIBLE FOR COMPLIANCE WITH APPLICABLE LOCAL AND NATIONAL CODES AND REGULATIONS.

The base language of this document is ENGLISH. Any translations must be made from the base language document.

Table 1. Recommended Feed Water Quality for Sterilizers

Condition	Nominal Conditions	Maximum Conditions
Temperature	40°-60°F (4°-16°C)	70°F (21°C)
Total Hardness as CaCO₃¹	50-120 mg/L	171 mg/L
Total Dissolved Solids	100-200 mg/L	500 mg/L
Total Alkalinity as CaCO₃	70-120 mg/L	180 mg/L
pH	6.8-7.5	6.5-8.5
Total Silica	0.1 - 1.0 mg/L	2.5 mg/L

1. 17.1 mg/L = 1.0 grain hardness

Table 2. Required Feed Water Quality for Carbon-Steel Steam Generators

Condition	Nominal Conditions	Maximum Conditions
Temperature	140°F (60°C) ¹	140°F (60°C)
Total Hardness as CaCO₃²	0-17 mg/L	130 mg/L
Total Dissolved Solids	50-150 mg/L	250 mg/L
Total Alkalinity as CaCO₃	50-100 mg/L	180 mg/L
pH	6.8-7.5	6.5-8.5
Total Silica	0.1 - 1.0 mg/L	2.5 mg/L
Resistivity - ohms/cm³	2000-6000	26000

1. For optimal operation. Water provided at lower temperatures will lengthen cycle times.

2. 17.1 mg/L = 1.0 grain hardness

3. **WARNING – BURN HAZARD:** Sterilizer operator may be severely burned by scalding water if the water level control malfunctions. The steam generator level control may malfunction if the supply water exceeds 26,000 ohms/cm (38.5 micro-mhos conductivity min.). Do not connect to treated water (e.g., distilled, reverse osmosis, deionized) unless water resistivity is determined to be acceptable. If water exceeds 26,000 ohms/cm, contact STERIS Service Engineering for information concerning modifications required to the generator control system.

CHAMBER SIZES	DIMENSIONS - inches (mm)

More Cleaning Power & Protection

Caviwave™ Ultrasonic Cleaning Family

Caviwave
Cleaning System

NEW!
Caviwave Pro
Cleaning System

Caviwave Ultrasonic Cleaning Systems provide more cleaning power, more protection and more flexibility for your unique instrument processing needs. The Caviwave line offers cleaning options for everything from delicate ophthalmic instruments to heavy orthopedic sets to valuable *da Vinci*® 8mm and 5mm *EndoWrist*® Instruments.

The powerful **132 kHz transducers** deliver three times the frequency of the industry standard 40 kHz transducer. This micromechanical scrubbing action efficiently cleans both hard-to-reach internal passages and heavily soiled external surfaces, providing reassurance that your instruments were thoroughly cleaned and protected.

Caviwave™ Ultrasonic Cleaning Systems

Efficient Cleaning

The Caviwave Ultrasonic Cleaner (single bay) and Ultrasonic Console (dual bay) were designed to handle many types of surgical instruments:

- lumened (canulated) instruments
- heat-sensitive instruments
- delicate ophthalmic instruments to heavy orthopedic sets

Automated lift elevator

Toe touch cycle start

Lumened device flush

Preprogrammed cycles

Automated Processing

Preprogrammed cycles are easy to use and provide consistency of cleaning even for the hard to see or hard to reach areas.

- automated load/unload elevator provides ergonomic tray loading
- toe touch control provides hands-free cycle start
- automatic fill maintains water level and quality
- automatic drain helps increase productivity
- lumen flushing is more effective than only manual brushing
 - port flushing: canulated instruments with ports
 - reverse port flushing: instruments without ports

Original Caviwave Cleaner

Original Caviwave Console

NEW!

Caviwave™ Pro Ultrasonic Cleaning System

With CaviClean technology

More Peace of Mind

With Caviwave Pro, you get all of the benefits of the original Caviwave model, plus the added capability of cleaning valuable *da Vinci* 8mm and 5mm *EndoWrist* instruments and accessories:

- Caviwave Pro systems include a validated cycle for automated processing of both *da Vinci EndoWrist* Instruments and accessories
- automated cycle provides reliable, repeatable cleaning performance
- minimizes labor-intensive manual cleaning of *da Vinci EndoWrist* Instruments and Accessories
- automatically flushes*, cleans, lubricates and dries** *da Vinci EndoWrist* Instruments and Accessories

Our process has been independently tested and validated in partnership with Intuitive Surgical to meet the benchmarks established by AAMI TIR 30:2003 and AAMI TIR12:2004.

Easy-to-use control panel

Up to 35 lb. of regular instruments

Lumened instruments

da Vinci EndoWrist instruments

CaviClean Technology

The patented **CaviClean Technology** found in Caviwave Pro Ultrasonic systems, developed after extensive research, is a simultaneous multi-frequency design that creates optimal ultrasonic action and noise reduction.

CaviClean Technology:

- Combines:
 - Large bubbles with soil-removing power
 - Small bubbles with good penetration capability
- Includes automated cycles that wash, rinse, dry and lubricate
- Provides complete coverage of all surfaces (internal and external)
- Removes film and small particles

New Caviwave Pro Cleaner

New Caviwave Pro Console

*Flushing not required for *EndoWrist* accessories. **Caviwave Pro console only.

More Cleaning Power

From the powerful 132 kHz transducers in the Caviwave Cleaner and Console to the patented CaviClean Technology of the Caviwave Pro Cleaner and Console, STERIS provides the optimal ultrasonic performance you need.

Caviwave Cleaner

More Protection

Prolystica cleaning chemistries are formulated to be tough on soil but gentle on instruments. This detergent removes bioburden and protects the passivation layer of your stainless steel instruments.

After the instruments have been cleaned and dried, we go even further by adding lubricant during the rinse phase to help protect your surgical instruments.

Caviwave Console

More Environmentally Friendly

Each Caviwave Ultrasonic cleaning system uses an efficient water recovery system that allows rinse water to be reused for up to 12 cycles, drastically reducing the amount of water used by the system.

Caviwave systems also use an environmentally friendly chemistry. From the small recyclable packaging to the biodegradable ingredients, Prolystica Enzymatic chemistry is gentle on the environment.

UTILITY CONNECTIONS:

C - HOT TAP WATER, 1/2" FPT (Female Pipe Thread) CPVC
 D - GRAVITY DRAIN, 1 1/4" CPVC PIPE
 F - POWER CONNECTION:
 Route through opening at F to the terminal block located behind the hinged front panel.

CAUTION!
 REMOVE BOLTS, NUTS AND SHIPPING BRACKETS FOR COUNTERWEIGHTS AT UNIT REAR.

NOTES:

1. SEE DOCUMENT: INSTALLATION SPECIFICATIONS AND UTILITY REQUIREMENTS
2. ALL UTILITIES LOCATION DIMENSIONS ARE ± 1"
3. LOCK ALL CASTERS AFTER INSTALLING THE UNIT IN PLACE

ALL DIMENSIONS ARE IN INCHES (MILLIMETERS)		CAVITAVE ULTRASONIC CLEANER - 20W		EQUIPMENT DRAWING NO. 136825-062	
APPLICABLE TO EQUIPMENT MODELS DWG. NO. 62941-091		GENERAL INSTALLATION LAYOUT DWG.		ITEM LOCATION(S)	
STERIS STERIS Corporation Mentor, OH		SHIT. 1 OF 3			

Caviwave Cleaner - 20W INSTALLATION SPECIFICATIONS & UTILITY REQUIREMENTS

(Steris Part Number: CR12)

Installation Specifications:

1. The installation of the STERIS Sonic Washer must meet all Federal, State and Local regulations.
2. Installation specification is listed as Engineering and Installation Guides.
Referenced components and service connections are not furnished unless under written agreement with STERIS.
3. STERIS assumes no responsibility for changes made necessary through failure to observe the specifications on Equipment Drawing and notes. Specifications and descriptions are subject to change without notice.

Shipping Dimensions and Weight:

1. Shipping Container Dimensions : 44" x 46" x 55"
2. Approximate Washer and Container Shipping Weight: 800 lbs
3. Washer Outer Dimensions : 36" x 35" x 41"

Environmental Parameters:

1. Approximate Washer Operating Weight - 700 lbs
(Unit weight + 20 gallons water + 35 lbs loaded instrument tray)
2. Approximate Heat Dissipated from Washer - 275 Btu
3. Approximate Washer Operational Noise Level - 67 to 75 dB
4. Washer Environment Range
 - Ambient Room Temperature - 50 °F (10 °C) to 105 °F (40 °C)
 - Room Relative Humidity - 30% to 75%
 - Room Atmospheric Pressure - 20.6 "Hg (700 mBar) to 31.3 "Hg (1060 mBar)
5. Service Clearance Considerations
 - Unit is on casters; removable panels are located on all sides
LOCK ALL CASTERS AFTER INSTALLING THE UNIT IN PLACE
 - Clearance on front side of unit should be depth of unit plus 24 inches to allow unit to be moved out for servicing.
6. THE GAP BETWEEN THE BACK OF THE UNIT AND THE WALL (6" MIN) DEPENDENT
IN DEPTH ON THE PIPING AND CONNECTOR SYSTEMS EMPLOYED IN THE UTILITY CONNECTIONS.

Plumbing Utility Requirements:

1. Hot Tap Water

- 25 to 50 PSI (1.03 to 3.45 Bar) 100 to 120 °F (38 to 49 °C)
- 1/2" FPT (Female Pipe Thread) CPVC

2. Drain

- Gravity Drain, 10 GPM maximum flow, 120°F (49 °C) Maximum water temperature
- 1-1/4" CPVC Pipe

Note: See Equipment drawing for Drain plumbing instructions

6. Piping Installation Preparation

- Washer hook up piping should be performed by certified plumbing contractor in accordance to local codes.
RECOMMEND USING FLEXIBLE UTILITY CONNECTIONS - IF ALLOWED BY APPLICABLE CODE.
(NECESSARY TO ALLOW UNIT TO BE MOVED FOR SERVICING).
 - Always blow down facility water and air lines before final connection to washer.
 - The washer is not supplied with a vacuum breaker or backflow preventer, and where required by local codes, installation of such a device in the water lines is by others.
 - STERIS does not provide piping components from washer to facility water or air utility piping source.
 - Facility water and air shut off valves must be nearby and within sight of the washer.
 - Shut off valves should be installed and labeled per facility plumbing guidelines.
 - Threaded water disconnects required;
- Unit must be disconnected from facility piping when servicing washer from back side.

Electrical Utility Requirements:

1. Nameplate Data

- Verify unit voltage configuration prior to installation
- Check unit Nameplate data tag at time of installation

2. Electrical Power Requirements

- The standard **Caviwave Cleaner-20W** configuration will operate on **208 V 50/60 Hz Three Phase** with earth ground and neutral (5-wire) - **16.3 Amps**.
- The standard **Caviwave Cleaner-20W** configuration can be field wired to operate on **Single Phase 208 V 50/60 Hz** with earth ground and neutral (4-wire) – **19.6Amps**.
Note: Connect L1 to washer 1L1 & 1L2, L2 to washer 1L3, and N to N.

- The standard **Caviwave Cleaner-20W** configuration requires factory installed option **CR12-11** to operate on **220-240 V 50/60 Hz Single Phase** with earth ground and without neutral (3-wire) - **26 Amps**.

IMPORTANT NOTE: The **CR12-11 220/230/240V** option must be factory installed. It is not available as a field installed kit. Neutral wire connection above 220 V is not an available factory wiring configuration.

3. Electrical Disconnect Switch Box

- Facility electrical disconnect box must be nearby and within sight of the washer.
- Box should be installed to allow operator access and labeled with washer identification per facility guidelines.

4. Electrical Circuit Breaker Box Recommendations

- UL listed file E2875 & 154828 or comparable circuit breaker recommended.
- Circuit breaker should be **208/240V 30 Amp** rated with lockable disconnect switch.

5. Electrical power connection to washer

- A grounding conductor must be connected to protective earth conductor terminal of the main control panel to provide the system with a proper earth ground. This conductor must be green or green with a yellow stripe and should be sized as follows - **Minimum 10 AWG rated 90 °C**
- The power supply connections must be connected through a proper disconnecting device to terminals 1L1, 1L2, 1L3, and N.
- Route power cable through F (see drawing) to terminal block located behind the hinged front panel.
- **The system is designed to accept either 208 V 50/60 Hz, 3 Phase with Neutral or 208 V 50/60Hz 1 Phase with Neutral (with jumper for 1Phase installed).**
- The 220-240 V factory installed wiring option utilizes an isolation transformer.
No connection required for Neutral.

6. Electrical Power Cord/Cable Specifications

- **Cable from washer to electrical switch box should be hard wired; plug and receptacle connection is not recommended.**
- **Power cord must be UL817 Compliant Green/Yellow conductors may only be used for connection to protective earth ground conductor terminals**
- **Always follow local electrical codes and safety-related work practices for wiring**
- **Power cable must allow unit to be moved away from the wall for servicing.**

7. Electrical Installation Preparation

- Electrical wiring should be performed by certified electrical contractor in accordance to local codes.
- STERIS does not supply the electrical disconnect box.
- STERIS does not supply electrical power cord, or cable from washer to electrical disconnect box.

APPLICATION

The Caviwave Sonic Cleaner is designed to thoroughly wash (remove tissue, blood and other contaminants) instruments prior to final disinfection and sterilization. The Caviwave Ultrasonic System's compact design makes it suitable for use in the Operating Room, Central Supply or other high volume area to process pre-cleaned instruments.

DESCRIPTION

The Caviwave Ultrasonic Cleaning System Sonic Cleaner is a freestanding instrument washer supplied in a compact stainless-steel cabinet. The Sonic Cleaner contains all needed components to effectively clean (utilizing ultrasonic cavitation passing through a detergent-balanced wash solution) surgical instruments prior to disinfection and sterilization.

The Sonic Cleaner is equipped with an automatic opening lid and load elevator for easy and safe instrument loading.

STANDARDS

The Caviwave Ultrasonic Cleaning System meets the applicable requirements of the following standards:

- **EMC Directive 89/336/EEC, 92/31/EEC, 93/68/EEC.**
- **Low Voltage Directive 73/23/EEC, 93/68/EE.**
- **ETL Listed.**
- **Underwriters Laboratories (UL) Standard 61010-1.**
- **Underwriters Laboratories (UL) Standard 61010A-2-010.**
- **Canadian Standards Association (CSA) Standard C22.2 No. 61010-1.**
- **Canadian Standards Association (CSA) Standard C22.2 No. 61010-2-010.**

(Typical only - some details may vary.)

FEATURES

The Caviwave Ultrasonic Cleaning System Sonic Cleaner is wired for operation on either 208 V (60 Hz, three phase or single phase), or 240 V, 60 Hz, single phase voltage. Unit can be configured for single phase. STERIS supplies all components necessary to obtain a complete working unit ready for (but not including) installation and connection to facility service lines. The Sonic Cleaner includes the following features:

Optimum Ultrasonic Cleaning Power is ensured by constant power output generators operating at 132 kHz and complemented with complex resonance frequencies to ensure lock-box cleaning efficiency. The generators are mounted with individual slide out modules for ease of service. Also, patented ceramically-enhanced transducer modules are bonded to the wash tank providing maximum energy transmission for instrument cleaning.

Automatic Lid and E-Z Load Tray Elevator improve safety and increase instrument loading ease. E-Z Load Tray Elevator is positioned at a convenient working height and is oriented laterally for ease of loading heavy instrument trays.

Port Flushing System processes up to six rigid lumened surgical devices with both ultrasonic energy and internal flushing.

The Selections Checked Below Apply To This Equipment

VOLTAGES

- 208 V, 60 Hz, 3 ph (Standard)
- 208 V, 60 Hz, 1 ph
- 240 V, 60 Hz, 1 ph

ADDITIONAL TANK SIZES

- 11-gal (42 L) Tank
- 15-gal (57 L) Tank
- 20-gal (76 L) Tank

ACCESSORIES

- Seismic Design
- Additional Port Flushing Kit
- Additional Port Flushing Tray
 - 11-gal (42 L) Tray
 - 15-gal (57 L) Tray
 - 20-gal (76 L) Tray

Item _____

Location(s) _____

Illuminated Main Controls include power ON/OFF, automatic fill, drain alert with cycle counter, adjustable wash cycle timer, drain actuator and lid actuator.

Locking Caster Wheels are supplied for ease of Caviwave Ultrasonic Cleaning System Sonic Cleaner movement. The four caster wheels add 2" (51 mm) to total Sonic Cleaner height.

Large Capacity Process Tank accepts a large variety of instrument trays. One instrument tray is included with each unit. Tank weight capacity is as follows:

- **11-gal (42 L) tank holds 22 lb (10 kg) of instruments.**
- **15-gal (57 L) tank holds 22 lb (10 kg) of instruments.**
- **20-gal (76 L) tank holds 35 lb (16 kg) of instruments.**

Automatic Pushbutton Ultrasonic Drain with drain indicator light and built-in counter to provide wash cycle number tracking, alerts operator when ultrasonic tank needs drained. Adjustable cycle drain count preprogrammed to 12 cycles.

Toe Touch Control lowers the instruments into the cleaning solution and starts the processing cycle. When cycle is complete, the lid automatically opens and instrument tray is raised to unload position.

Safety Interlocks and Controls are provided to ensure complete operator safety.

Front and Side Service Access Panels are supplied on the unit for ease of any maintenance procedures. Access doors are scratch and dent resistant and sound dampened. Front doors have automatic power cut-off feature to protect components when doors open.

PREVENTIVE MAINTENANCE

Customers are encouraged to contact STERIS concerning our annual maintenance program. Under the terms of the program, preventive maintenance, adjustments and replacement of worn parts are provided on a scheduled basis to help ensure optimal equipment performance and help minimize untimely or costly schedule interruptions. STERIS maintains a worldwide staff of

well-equipped, factory-trained technicians to provide these services, as well as on-site installation, training and expert repair services. Contact STERIS for details.

NOTES

1. Pipe sizes shown indicate terminal outlets only. Building service lines (not provided by STERIS) must supply the specified pressures and flow rates.
2. STERIS recommends that a dedicated, grounded electrical circuit be provided for each unit. Extension cord and plug use is not recommended.
3. Approximate net weight:
 - » Model CR101: 425 lb (193 kg).
 - » Model CR115: 425 lb (193 kg).
 - » Model CR12 : 500 lb (227 kg).
4. Sonic Cleaner must be mounted on a hard, level surface.
5. Caviwave Sonic Cleaner is manufactured for STERIS by Crest Ultrasonics.

UTILITY REQUIREMENTS

Refer to equipment drawing for installation details and specifications.

Electrical

208 or 240 V, 60 Hz, 1-Phase (4 Wire) or 3-Phase (5 Wires including Neutral and Ground)

Drain

1-1/4" NPT CPVC Male Slip (trap and waste lines are not provided by STERIS).

Hot Water

1/2" NPT CPVC Male Slip (15-50 psi); 100-120°F (38-49°C).

Prep and Pack Workstations from STERIS | Ergonomic, Innovative and Flexible

ERGOSTATS

ULTRA FRAMES

WORKTABLES

CARTS

One size does not fit all. Whether you're short or tall, seated or standing, STERIS has an ergonomic workstation to meet your needs. With the risk of high cost and lost-time back injuries, it has become increasingly important to protect your workers from overexertion. We designed STERIS prep and pack workstations to facilitate a healthy posture, to organize your space, and to maximize your productivity.

You now have the option of four workstations based on your activity-level:

- > **Basic Worktable** – basic work surface option for wrapping sets. Available with electric or manual height adjust.
- > **ErgoStat** – deluxe option for assembling instrument sets and organization. Available with electric height adjust.
- > **Ultra Frame Single** – space saving option for assembling instrument sets and organization. Available with manual height adjust.

- > **Ultra Frame Double** – positioned back-to-back for space savings; manual height adjust.
- > The “**Deluxe**” version of the ErgoStat and Ultra Frame can accommodate instrument tracking hardware such as computers, flat-screen monitors, keyboards and scanners.

All prep and pack workstations are constructed with durable, easy-to-clean stainless steel surfaces. And, with a wide-variety of accessories, you can customize your table to best suit your workflow. Lastly, built-in wheels allow you to easily move the table where you want it, when you want it.

Prep and Pack Workstations are not built the same. Say goodbye to your old boring tables and upgrade to STERIS prep and pack workstations. Your employees will thank you!

APPLICATION

This sterilizer is configured for prevacuum sterilization of heat- and moisture-stable materials used in healthcare facilities. These units are equipped with prevacuum, Steam Flush Pressure Pulse (SFPP), gravity, liquid, DART (Bowie-Dick) and vacuum leak test cycles.

DESCRIPTION

Amsco® Evolution™ Steam Sterilizers are equipped with the latest features in both state-of-the-art technology and ease of use.

Primary Product Features

- **Hinged door** for 26 x 37.5" (660 x 953 mm) sterilizers. Door may be hinged on either left side or right side.
- All plumbing components are mounted to a free-standing, modular rack (stand). The stand connects to the core sterilizer assembly during installation.
- **Vertical-sliding door** 26 x 26" (660 x 660 mm) or **horizontal-sliding door** 26 x 37.5" (660 x 953 mm):

26 x 26" (660 x 660 mm) Sterilizer
Vertical Sliding Door

26 x 37.5" (660 x 953 mm) Sterilizer

26 x 37.5" (660 x 953 mm) Sterilizer
Horizontal Sliding Door

Typical only - some details may vary.

- » For 26 x 26" (660 x 660 mm) sterilizers, door travels vertically down to open and up to close.
- » For 26 x 37.5" (660 x 953 mm) sterilizers, door travels horizontally right to left to open.
- An **advanced, PC-based control system** employs user-friendly interface screens, with enhanced graphics.
- 8.4" (214 mm) color touch screen display.
- Ink on paper impact printer.

The Selections Checked Below Apply To This Equipment

TYPE

- Prevacuum
- Steam Flush Pressure Pulse (SFPP)

MODEL NUMBER/SIZE

- HC900 / 26 x 37-1/2 x 42" (660 x 950 x 1067 mm)
- HC1200 / 26 x 37-1/2 x 54" (660 x 950 x 1372 mm)
- HC1500 / 26 x 37.5 x 66" (660 x 953 x 1676 mm)
- HC600 / 26 x 26 x 39" (660 x 660 x 991 mm)
- HC800 / 26 x 26 x 49" (660 x 660 x 1245 mm)
- HC1000 / 26 x 26 x 61" (660 x 660 x 1549 mm)

STERILIZER ELECTRIC SERVICE

- 208/240 V ac, 50/60 Hz, 3-Phase, 12 A/Phase
- 480 V ac, 50/60 Hz, 3-Phase, 6 A/Phase

STEAM SOURCE

- House Steam
- 72 kW Optional Integral Electric Steam Generator
 - 208V, 50/60 Hz, 3-Phase, 203 A
 - 240V, 50/60 Hz, 3-Phase, 176 A
 - 480V, 50/60 Hz, 3-Phase, 89 A

STEAM PIPING

- Copper/Brass
- Optional Right-hand Piping

NOTE: Left-hand piping is standard

DOOR CONFIGURATION

(26 X 37.5" STERILIZERS, ONLY)

- Single-Door**
 - Hinged Door
 - Horizontal-Sliding
 - Left-Hand
 - Right-Hand (not available for sliding door units)
- Double-Door**
 - Hinged Door

Note: Operating End hinge position listed first, Non-operating End hinge listed second.

- Right-Hand/Left-Hand
- Right-Hand/Right-Hand
- Left-Hand/Right-Hand
- Left-Hand/Left-Hand
- Horizontal-Sliding Door

Note: Operating end slide direction listed first, Non-operating end slide direction listed second.

- Left-Hand/Right-Hand

(Direction of door movement is right-hand to left-hand, as viewed from the sterilizer's operating end.)

DOOR CONFIGURATION

(26 X 26" STERILIZERS, ONLY)

- Single Door Vertical Sliding
- Double Door Vertical Sliding

SINGLE-DOOR MOUNTING

- Cabinet Enclosed/Freestanding
- Recessed

DOUBLE-DOOR MOUNTING

- Recessed through One Wall
- Recessed through Two Walls

ACCESSORIES

- 42" (1067 mm) Chamber Length
- 54" (1372 mm) Chamber Length
- 66" (1676 mm) Chamber Length
- 39" (991 mm) Chamber Length
- 49" (1245 mm) Chamber Length
- 61" (1549 mm) Chamber Length
- Loading Car
- Transfer Carriage
- Chamber Track Assembly
 - Single Door Double Door
- Loading Car, Transfer Carriage and Track Assembly
 - Single Door Double Door
- Chamber Rack and Shelf (39" & 42" Units, only)

REMOTE MONITORING

- ProConnect® Response Center (Remote Monitoring, Priority Technical Support, Customer Care Center Access, Equipment Performance Reports)

Item _____
 Location(s) _____

Model Number	Internal Dimensions Inches (Millimeters)	Cubic Inches	Cubic Feet
HC600	26 x 26 x 39" (660 x 660 x 991 mm)	26,364	15.2
HC800	26 x 26 x 49" (660 x 660 x 1245 mm)	33,124	19.1
HC1000	26 x 26 x 61" (660 x 660 x 1549 mm)	41,236	23.8
HC900	26 x 37.5 x 42" (660 x 953 x 1067 mm)	35,100	20.3
HC1200	26 x 37.5 x 54" (660 x 953 x 1372 mm)	46,800	27.0
HC1500	26 x 37.5 x 66" (660 x 953 x 1676 mm)	64,350	37.2

- Standard communication interface with most PC-compatible peripheral devices (e.g., data collection systems, printers)
- Automatic check of control program and cycle data maintains process integrity
- Control is designed to accommodate integrated remote monitoring and instrument tracking interfaces.

STANDARDS

Each sterilizer meets applicable requirements of the following listings and standards, and carries the appropriate symbols:

- **ASME Code, Section VIII, Division 1 for unfired pressure vessels.** The pressure vessel is so stamped; ASME Form U-1 is furnished. Shell and door are constructed to withstand working pressure of 45 psig (3.1 bar).
- **Underwriters Laboratory (UL) Standard 61010-1** as certified by Intertek Testing services.
- **Canadian Standards Association (CSA) Standard C22.2, No. 1010** as certified by Intertek Testing services.

FEATURES

26 x 37.5" (660 x 953 mm) Chamber Cross-section or **26 x 26" (660 x 660 mm) Chamber Cross-section** sized to allow for efficient, high-volume processing of sterilization containers, trays and packs.

Fast-operating, low-effort manual door lock mechanism (hinged door models) allows door to be locked or unlocked using a single 30° handle motion, with a fast operating, low-effort door lock mechanism.

Power Door operates quietly, and consists of a motor-driven cable and pulley mechanism. Vertical- and horizontal-sliding door is controlled from control panel push buttons. The door slides open, propelled by the cable and pulley driven electric motor. Double door configurations are supplied with controls at both ends of the sterilizer to help prevent the possibility of cross-contamination.

Software calibration is performed in the Service Mode, accessible through the touch screen displays, and accomplished using external or internal temperature and pressure sources. Control system provides printed record of all calibration data for verification to current readings.

Pneumatic valves are fitted in piping for steam, water and exhaust control.

Principle piping components and the primary control assembly are mounted to a **separate, modular support rack** (plumbing stand). The plumbing stand connects during installation to core chamber and frame assembly, allowing for increased access for service and maintenance procedures when necessary.

ProConnect Response Center - Minimize response time and unscheduled downtime on your equipment. Secure, internet-based, 24/7 remote monitoring enables both Predictive Maintenance as well as instant alerts to STERIS when there is

an equipment alarm. Also included are priority technical support, online parts ordering, equipment performance dashboards, and scheduling service at eservice.steris.com. ProConnect can be directly connected through the sterilizer control or can reside on a separate PC in the department.

UTILITIES CONSERVATION FEATURES

Resistive Thermal Detectors (RTD) are installed for precise sterilizer temperature control and conservation of utilities. The dual element chamber drain line RTD senses and controls temperature variations within the sterilizer chamber. A jacket RTD provides temperature control within the jacket space. These RTD signals, converted into electrical impulses, provide accurate control inputs and readouts throughout entire cycle.

Electronic water saving control includes an RTD to minimize the amount of water used in condensing the exhausted chamber steam and condensate.

Automatic utilities start-up/shutdown permits utilities conservation. Shutdown may be programmed to activate at the end of any designated cycle or time of day. When activated, the control system automatically shuts off all utility valves, conserving steam and water usage. Sterilizer utilities can be restarted either by programmed time or manual operation. A different shutdown and restart time can be programmed for each day.

Insulation sleeve is fitted around exterior of the sterilizer vessel to conserve heat and limit heat loss to the surrounding environment. The sleeve is sealed and held in place by hook-and-loop closures. Insulation is asbestos-free and chloride-free, silicone impregnated, oil- and water-resistant fiberglass.

Two-stage vacuum pump is supplied on all units to effectively pull chamber to specified vacuum levels, reduce cycle time by shortening conditioning and exhaust times; as well as reduce water consumption.

PROCESSING CYCLES

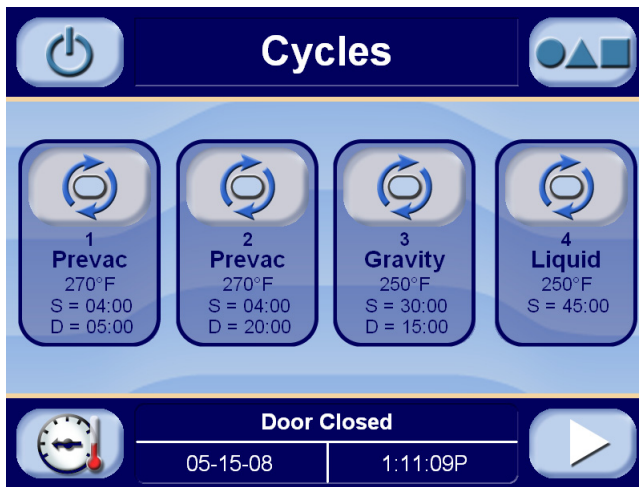

All processing cycles factory programmed into the sterilizer control have been validated to **AAMI/ANSI ST-8**.

IMPORTANT: Applicable cycles have been validated to satisfy the requirements outlined below. If cycle parameters (sterilize time, dry time, temperature) other than those listed are required, it is the responsibility of the healthcare facility to consult and follow the device manufacturer's written instructions.

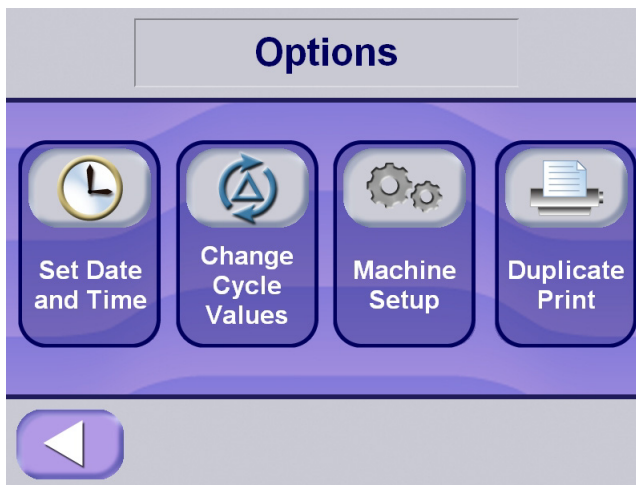

Dry Times for Prevacuum and SFPP are based upon maximum load as follows:

- 26 x 26" (660 x 660 mm) sterilizer - three full shelves of 25 lb (11 kg) instrument trays
- 26 x 37.5" (660 x 953 mm) sterilizer - four full shelves of 25 lb (11 kg) instrument trays

Prevacuum configuration sterilizers are factory programmed with the following cycles: 270°F (132°C) Prevacuum, Gravity, SFPP, Liquid, 275°F (135°C) Prevacuum; SFPP and Test

Ready State Screen

Options Screen

Cycles. Prevacuum cycles feature vacuum pulses followed by pressure pulses for **porous load cycles**. **Prevacuum cycles** are intended for efficient, high-volume processing of heat- and moisture-stable materials, such as fabrics and wrapped hard goods. This process incorporates a series of vacuum/pressure pulses to condition the load prior to sterilization.

Default Prevac Cycles

- **270°F (132°C) Prevacuum Cycle:** For efficient, high-volume processing of heat- and moisture-stable materials, such as fabrics and wrapped hard goods. This process incorporates a series of pressure/vacuum pulses to condition the load prior to sterilization.
 - » Sterilize temperature: 270°F (132°C)
 - » Sterilize time: 4 minutes
 - » Dry time: 30 minutes
- **270°F (132°C) Prevacuum Cycle:** For sterilizing single fabric packs.
 - » Sterilize temperature: 270°F (132°C)
 - » Sterilize time: 4 minutes
 - » Dry time: 5 minutes

- **275°F (135°C) Prevacuum Cycle:** For sterilizing double-wrapped instrument trays.
 - » Sterilize temperature: 275°F (135°C)
 - » Sterilize time: 3 minutes
 - » Dry time: 30 minutes
- **250°F (121°C) Gravity Cycle:** For sterilizing fabrics.
 - » Sterilize temperature: 250°F (121°C)
 - » Sterilize time: 30 minutes
 - » Dry time: 15 minutes
- **270°F (132°C) Gravity Cycle:** For sterilizing double-wrapped instrument trays.
 - » Sterilize temperature: 270°F (132°C)
 - » Sterilize time: 15 minutes
 - » Dry time: 30 minutes
- **250°F (121°C) Gravity Cycle:** For sterilizing double-wrapped instrument trays.
 - » Sterilize temperature: 250°F (121°C)
 - » Sterilize time: 30 minutes
 - » Dry time: 30 minutes
- **270°F (132°C) Gravity Cycle:** For sterilizing fabric packs.
 - » Sterilize temperature: 270°F (132°C)
 - » Sterilize time: 25 minutes
 - » Dry time: 15 minutes
- **Liquid Cycle:** This cycle is used for sterilizing liquids in borosilicate containers with vented closures.
 - » Sterilize temperature: 250°F (121°C)
 - » Factory programmed sterilize time: 45 minutes
 - » Dry time: not applicable

IMPORTANT: It is inappropriate for a healthcare facility to sterilize liquids for direct contact with patients.

Steam Flush Pressure Pulse (SFPP) configuration sterilizers are factory programmed with the following cycles: SFPP, Prevacuum, Gravity, Liquid and Test Cycles. See cycle descriptions below for more details:

Default SFPP Cycles

- **270°F (132°C) SFPP Cycle:** For efficient, high-volume processing of double wrapped instrument trays and fabric packs. This process incorporates a series of steam flushes and pressure pulses at pressures above atmospheric levels to condition load prior to sterilization.
 - » Sterilize temperature: 270°F (132°C)
 - » Sterilize time: 4 minutes
 - » Dry time: 30 minutes
- **275°F (135°C) SFPP Cycle:** For sterilizing double-wrapped instrument trays.
 - » Sterilize temperature: 275°F (135°C)
 - » Sterilize time: 3 minutes
 - » Dry time: 30 minutes

- **270°F (132°C) SFPP Cycle:** For sterilizing single fabric packs.
 - » Sterilize temperature: 270°F (132°C)
 - » Sterilize time: 4 minutes
 - » Dry time: 5 minutes
- **270°F (132°C) Prevacuum Cycle:** For efficient, high-volume processing of heat- and moisture-stable materials, such as fabrics and wrapped hard goods. This process incorporates a series of pressure/vacuum pulses to condition the load prior to sterilization.
 - » Sterilize temperature: 270°F (132°C)
 - » Sterilize time: 4 minutes
 - » Dry time: 30 minutes
- **275°F (135°C) Prevacuum Cycle:** For sterilizing double-wrapped instrument trays.
 - » Sterilize temperature: 275°F (135°C)
 - » Sterilize time: 3 minutes
 - » Dry time: 30 minutes
- **250°F (121°C) Gravity Cycle:** For sterilizing fabrics.
 - » Sterilize temperature: 250°F (121°C)
 - » Sterilize time: 30 minutes
 - » Dry time: 15 minutes
- **270°F (132°C) Gravity Cycle:** For sterilizing double-wrapped instrument trays.
 - » Sterilize temperature: 270°F (132°C)
 - » Sterilize time: 15 minutes
 - » Dry time: 30 minutes
- **Liquid Cycle:** This cycle is used for sterilizing liquids in borosilicate containers with vented closures.
 - » Sterilize temperature: 250°F (121°C)
 - » Factory programmed sterilize time: 45 minutes
 - » Dry time: not applicable

IMPORTANT: It is inappropriate for a healthcare facility to sterilize liquids for direct contact with patients.

TESTING CYCLES

- **DART Warm-up Cycle:** This cycle is used to warm chamber to operating temperature prior to performing a DART (Bowie-Dick) Test cycle.
- **DART (Bowie-Dick) Test Cycle:** This cycle is used for conducting Bowie-Dick tests. Recommended load is a properly prepared Bowie-Dick test pack. Preprogrammed cycle parameters cannot be adjusted by the user.
 - » Sterilize temperature: 270° (132°C)
 - » Sterilize time: 3 minutes and 30 seconds
 - » Dry time: 1 minute
- **Vacuum Leak Test:** This cycle is used for testing the vacuum integrity of the sterilizer's piping. Sterilizer chamber must be empty while running this test cycle. All timing is preprogrammed and cannot be adjusted.

CONTROL SYSTEM

Design Features

The control system monitors and controls all sterilizer operations and functions. The control system is factory-programmed with standard sterilizing cycles. Each cycle is

adjustable to meet specific processing requirements. All operator-accessible control functions can be changed using the touch screen control.

IMPORTANT: If cycle parameters (sterilize time, dry time, temperature) other than those listed are required, it is the responsibility of the healthcare facility to consult and follow the device manufacturer's written instructions.

Cycle values and operating features may be adjusted and verified prior to cycle operation. Cycle parameters are retained in control memory for repeated use.

Once cycle is started, cycles and cycle values cannot be changed until cycle is complete. If chamber temperature drops below set point during the exposure phase, the timer is set to stop and automatically reset once normal operating temperature is reached.

Critical control system components are housed within a sealed compartment to protect the components from moisture and heat generated during the sterilization process.

Operator interface control panel, consisting of a touch screen, is located on the operating (i.e., load or non-sterile) end of the sterilizer.

The operator interface consists of a **touch-sensitive, color screen**. This display allows for control communications, graphics and excellent visibility in most environments. The display panel, in conjunction with the control, is used as the monitor for the operator. All sterilizer functions, including cycle initiation and cycle configuration, are operated by pressing the touch-sensitive areas on the display. Display indicates appropriate control buttons, operator prompts, and status messages necessary to assist in sterilizer operation. All displayed messages are complete phrases with no codes to be cross-referenced. Display also indicates any abnormal conditions that may exist either in or out of a cycle. Control buffer memory retains up to ten previously-run cycles for later access.

24-Character ink-on-paper printer, located below touch screen, provides an easy-to-read printed record of all pertinent cycle data on 2.25" (57 mm) wide paper. Data is automatically printed at the beginning and end of each cycle and at transition points during the cycle. Three paper tape rolls and two printer ribbons are furnished with each unit.

Non-operating end (NOE) control panel, on double-door sterilizers only, includes a touch sensitive screen similar to the operating end screen. Preprogrammed cycles can be started from the NOE control panel. Display concurrently shows the same information as the operating end screen display. Other controls located at the non-operating end include door control pushbuttons (if power door), jacket and chamber gauges and an emergency-stop button (if power door).

Cycle configuration is performed by accessing the Change Values menu through the operating end touch screen.

In addition to adjustment of cycle values, the following operating parameters can also be changed through the Machine Setup menu:

- **Time display and printout units** 24-hour or AM/PM.
- **Audible signals, end-of-cycle signals and alarm signals** have three adjustable volume levels available through the control and display panel.
- **Temperature display and printout units** Fahrenheit (°F) or Celsius (°C). Temperature is set, displayed, controlled and printed to the nearest 0.1°. Recalibration is not required when changing temperature units.
- **Pressure/vacuum display and printout units** psig/InHg or bar. Recalibration is not required when changing pressure units.

SAFETY FEATURES

Emergency stop button located on the front panel, below the sterilizer control touch pad (Power Door Units Only). When pressed, immediately shuts off all outputs on the sterilizer. A key is used to reset the switch.

Control lockout switch equipped on chamber door(s), senses when door seal is energized and tight against the door. Control prevents cycle from starting until the limit switch signal is received. If control loses appropriate signal during cycle, alarm activates, cycle aborts and chamber safely vents with a controlled exhaust.

Chamber float switch activates alarm, aborts cycle and safely vents chamber with a controlled exhaust if excessive condensate is detected in the vessel chamber.

Pressure relief valve limits the amount of pressure buildup so that the rated pressure in the vessel is not exceeded.

Power door safety feature causes door drive to slip if the sliding door encounters an obstruction during its movement.

CONSTRUCTION

Shell Assembly

Two fully fabricated Type 316L stainless-steel shells, welded one within the other, form the sterilizer vessel. Type 316L stainless-steel end frame(s) is welded to door end. On single door units, back of chamber is fitted with welded, 316L stainless-steel dished head.

Sterilizer vessel is ASME and PED rated at 45 psig (3.1 bar) and insulated. Vessel includes one 1"-NPT chamber port for Customer use.

Steam-supply opening inside the chamber is shielded by a stainless-steel baffle.

Chamber Door(s)

Door is constructed of Type 316L stainless steel.

During cycle operation, door is sealed by a steam-activated door seal. Door seal is constructed of a special long-life rubber compound. When sterilize cycle is complete, the seal retracts under vacuum into a machined groove in the sterilizer's end frame.

A proximity switch is used by the control to determine if door is closed. An additional seal pressure switch prevents inadvertent cycle initiation if door is not sealed.

The door assembly is equipped with a mechanical locking mechanism that ensures the door cannot be opened as long as the seal is intact and energized and more than 2 psig (0.14 bar) pressure is in the chamber.

The sterilizer door is fitted with a stainless-steel panel that insulates the operator from the chamber end frame, reducing the chance of accidental contact with a hot metal surface.

Chamber Drain System

Drain system is designed to prevent pollutants from entering into the water-supply system and sterilizer.

The automatic condensing system, consisting of a heat exchanger, converts chamber steam to condensate and disposes condensate to waste. Cooling water flow is regulated by the waste line RTD to minimize water usage. Water supply shutoff valve is located in the recessed area of the unit.

Vacuum System

Two-stage vacuum pump reduces chamber pressure during prevacuum and post-drying phases. Air is drawn from the chamber through the vacuum system. Following the dry phase, chamber vacuum is relieved to atmospheric pressure by admitting air through a bacteria-retentive filter.

Steam Source

Sterilizers are piped, valved and trapped to receive building-supplied steam delivered at 50 to 80 psig (3.5 to 5.6 bar) dynamic. Standard steam piping is constructed of copper and brass and includes a shutoff valve, separator and a pressure regulator. (An optional, integral electric steam generator is also available.)

Piping

All piping is located on a modular plumbing rack (stand). Plumbing stand can be located on either side of the sterilizer.

MOUNTING ARRANGEMENT

Sterilizers are arranged for either freestanding or recessed installation, as specified. Each sterilizer is height-adjustable. Sterilizer subframe is equipped with a synthetic rubber gasket to ensure tight fit between the cabinet panels on freestanding units or between the front cabinet panel and wall partition on recessed units.

On freestanding units, stainless-steel side panels and a louvered top panel enclose the sterilizer body and piping.

ACCESSORIES

Material Handling Accessories include stainless-steel chamber tracks and stainless-steel loading cars with painted-steel or stainless-steel transfer carriages. Stainless-steel chamber rack and shelf are available for 39" (991 mm) sterilizers only. See separate product literature for details.

Optional Integral Steam Generator is constructed of 316L stainless steel or carbon steel. Generator is integral for 26 x 37.5" and 26 x 26" vertical door sterilizers. The steam generator is equipped with three main heating elements. Generator is operated by sterilizer control system. (Refer to ENGINEERING DATA / UTILITY REQUIREMENTS on page 6 for utilities specifications.)

PREVENTIVE MAINTENANCE

A global network of skilled service specialists can provide periodic inspections and adjustments to help assure low-cost peak performance. STERIS representatives can provide information regarding annual maintenance agreements.

NOTES

- Customer is responsible for backflow protection, if required.
- Pipe sizes shown indicate terminal outlets only. Building service lines, provided by others, must supply the specified pressures and flow rates.
- Disconnect switches (with OFF position lockout only; switches not supplied by STERIS) should be installed in electric supply lines near the equipment.
- Access to the recessing area from the control end of the sterilizer is recommended.
- Clearances shown are minimal for installing and servicing the equipment.
- Depending on the loading equipment used, additional clearance is required:
 - If shelves are used, length of sterilizer plus 24" (610 mm) at each door (36" [914 mm] and 39" [991 mm] sterilizers, only).
 - If loading car and carriage will be used, twice the length of sterilizer at each door.
- Floor drain should be provided within confines of sterilizer framework.

CUSTOMER IS RESPONSIBLE FOR COMPLIANCE WITH APPLICABLE LOCAL AND NATIONAL CODES AND REGULATIONS.

ENGINEERING DATA / UTILITY REQUIREMENTS

Drain:	2" ODT drain terminal (Floor drain capacity must handle peak water consumption)		
Electric:	Control and Vacuum Pump: 208-240 Volt, 3-phase, 50/60 Hz, 12 Amps/phase. 16A circuit breaker recommended. 480 Volt, 3-phase, 50/60 Hz, 6 Amps/phase. 8A circuit breaker recommended.		
House Steam:	Size: 3/4" NPT Pressure: 50 to 80 psig (3.45 to 5.5 bar), dynamic, condensate free, and 97% to 100% vapor quality.		
Consumption (270°F [132°C] Cycle):			
<u>26 x 26" (660 x 660 mm)</u>	39" (991 mm) Chamber Length • Average: 42 lb/cycle (19 kg/cycle) • Peak: 310 PPH (141 kg/hr)	49" (1245 mm) Chamber Length • Average: 52 lb/cycle (24 kg/cycle) • Peak: 310 PPH (141 kg/hr)	61" (1549 mm) Chamber Length • Average: 65 lb/cycle (30 kg/cycle) • Peak: 310 PPH (141 kg/hr)
<u>26 x 37.5" (660 x 953 mm)</u>	42" (1067 mm) Chamber Length • Average: 63 lb/cycle (29 kg/cycle) • Peak: 310 PPH (141 kg/hr)	54" (1372 mm) Chamber Length • Average: 82 lb/cycle (37 kg/cycle) • Peak: 310 PPH (141 kg/hr)	66" (1676 mm) Chamber Length • Average: 100 lb/cycle (45 kg/cycle) • Peak: 310 PPH (141 kg/hr)
Feed Water:	Size: 3/4" NPT, Pressure: 20 to 50 psig (1.4 to 3.5 bar), dynamic. Temperature: 59°F (15°C), maximum.		
Consumption:			
<u>26 x 26" (660 x 660 mm)</u>	39" (991 mm) Chamber Length Peak: 13 gpm (49 lpm) / Average: 112 gal/cycle (424 l/cycle) 49" (1245 mm) Chamber Length Peak: 13 gpm (49 lpm) / Average: 137 gal/cycle (519 l/cycle) 61" (1549 mm) Chamber Length Peak: 13 gpm (49 lpm) / Average: 168 gal/cycle (636 l/cycle)		
<u>26 x 37.5" (660 x 953 mm)</u>	42" (1067 mm) Chamber Length Peak: 13 gpm (49 lpm) / Average: 164 gal/cycle (621 l/cycle) 54" (1372 mm) Chamber Length Peak: 13 gpm (49 lpm) / Average: 207 gal/cycle (784 l/cycle) 66" (1676 mm) Chamber Length Peak: 13 gpm (49 lpm) / Average: 250 gal/cycle (946 l/cycle)		
Compressed Air (CA):	1/4" NPT 80-100 psig (5.5 to 6.9 bar psig), oil free, dehumidified, 3 cfm		
Sterilizer Operating Weight:	26 x 26 x 39" (660 x 660 x 991 mm) – 2756 lb (1250 kg) 26 x 26 x 49" (660 x 660 x 1245 mm) – 3200 lb (1450 kg) 26 x 26 x 61" (660 x 660 x 1549 mm) – 3500 lb (1590 kg) 26 x 37.5 x 42" (660 x 950 x 1067 mm) – 3800 lb (1720 kg) 26 x 37.5 x 54" (660 x 950 x 1372 mm) – 4200 lb (1900 kg) 26 x 37.5 x 66" (660 x 953 x 1676 mm) – 4700 lb (2132 kg)		
Optional Integral Steam Generator:	Water: 3/4" NPT; hot water temperature 140°F (60°C). Generator Drain: 3/4" NPT Electric: 208 Volt, 50/60Hz, 203 Amp, 3-phase minimum. 300A circuit breaker recommended. 240 Volt, 50/60Hz, 176 Amp, 3-phase minimum. 225A circuit breaker recommended. 480 Volt, 50/60Hz, 89 Amp, 3-phase minimum. 125A circuit breaker recommended. Boiler empty weight: 595 lb (270 kg); boiler operating weight: 800 lb (363 kg)		
Telecommunications Requirements for ProConnect Response Center	<ul style="list-style-type: none"> Each sterilizer requires an active wired or wireless TCP/IP network, 10/100BaseT Ethernet connection located as indicated on the equipment drawing, Internet access and an IP address on the facility network. For connection via a separate PC: 5 GB of available hard drive space to run the service agent. Can be installed on: <ul style="list-style-type: none"> Dedicated PC running Windows XP with 2.8GHz processor, 512MB of RAM Virtual Machine Server Local STERIS login at the PC with a username of STERIS and the password should be ProConnect (STERIS Customer Number). Ethernet cable to connect each piece of STERIS equipment and the dedicated PC to the facility network, if not connected directly to the sterilizer control.

**A New Shape.
A New Standard.**

The Amsco[®] Evolution[™]
Steam Sterilizer

 **STERIS**

AN EVOLUTIONARY ADVANCE IN STERILIZER CONTROL

The difference in Evolution's controls is obvious, even from across the room. The end results – improvements in efficiency and productivity – will be just as clear.

A dramatic redesign of Evolution's controls and displays includes crystal clear, high-resolution graphics and an Ethernet-enabled PC control. With one touch, operators can begin to learn it and put the control to work.

Look forward to Evolutionary differences in your Sterile Processing Department with greater throughput, reduced downtime and improved efficiency.

One-touch control display at ergonomic height

Sterilizer settings are easily customized according to department needs

Password protected, operator adjustable cycle parameters

Amsco Evolution’s new advanced control technology yields significant benefits now and for the future:

Productivity and efficiency

- > Large 8.4” touch screen - high resolution graphics
- > Intuitive navigation
- > Multi-lingual
- > Front mounted temperature and pressure gauges

Connectivity and cycle documentation compliance

- > On-board permanent ink printer
- > Instrument tracking system interface
- > Proactive remote monitoring system

High performance

- > Precision control – consistent, reliable processing
- > 12 programmable cycles – gravity, prevacuum, liquid and optional steam flush pressure pulse (SFPP)
- > Faster, deeper vacuum – improved conditioning and drying

Bold color graphics clearly indicate cycle phase and status

Large “time remaining” display is visible from across the department

Elliptical chamber provides maximum capacity for maximum productivity

AN EVOLUTIONARY ADVANCE IN FORM AND FUNCTION

Open the door and look inside. This is where AmSCO Evolution's unique shape really shines, providing consistent quality, reliability and productivity beyond other chamber designs.

Evolution's inherently strong round or elliptical form promotes even pressure distribution within the chamber. The 26" wide chamber opening facilitates the loading of wide instrument sets and the processing of large volumes of instruments with minimal steam consumption. The fully jacketed chamber promotes even heating and minimizes the formation of excess condensation. Evolution's steam activated gasket lessens the possibility of air entering the chamber, helping to ensure safe, efficacious processing for your patients.

Staff safety and productivity are enhanced with the new Evolution loading system and patented door lock system. The self-aligning transfer carriage makes loading effortless and the loading car nearly doubles instrument processing capacity compared to previous generation sterilizers. Operator contact with hot load contents is virtually eliminated and the low-effort door lock opens in seconds.

With a unique form, which improves function and helps to reduce operating costs over time, Evolution is an advance worth looking into.

Round chamber provides strength, durability and efficiency

One-piece door gasket requires no lubrication and is warranted for two years

Evolution features an ergonomic loading system with precision alignment

Evolution eliminates the stress points associated with 90° bends in chamber metal.

Inherently strong shape promotes even pressure distribution.

Amsco Evolution's unique features combine to optimize functionality and create maximum value for healthcare facilities and patients alike.

Quality

- > Corrosion resistant, solid 316L stainless steel construction – chamber and jacket
- > Fewer welds – less metal fatigue
- > Fully jacketed – less internal condensation

Productivity and efficiency

- > Wide chamber
- > High capacity loading

Staff and patient safety

- > Easy open doors
- > Ergonomic loading equipment
- > Steam activated gasket

Productivity Comparison

Sterilizer	Chamber Size	Trays per Load	Lbs. per Tray	Lbs. per Load*
Evolution	66"	20	25	500
Previous Generation	60"	15	17	255

*Validated load weight

Our manual door lock mechanism on hinged-door models requires minimal time and effort.

AN EVOLUTIONARY ADVANCE IN INSTALLATION AND OPERATION

Space is always at a premium in the sterile processing department. To minimize service clearance requirements, Evolution's exquisitely engineered modular piping and electrical system can be rolled into place to the left or right of the chamber – with all the connections completed in about five minutes.

Leading edge plumbing components work together in a freestanding design that makes perfect sense for ease of installation, operation and service accessibility.

But inside is where quality parts make a real difference in system performance and uptime. Evolution's modular piping system features reliable, high performance Burkert valves to minimize service and maintenance requirements. Sensors securely transmit information to STERIS's ProConnect™ remote monitoring system to proactively monitor system performance and improve service support - all to keep your department at its most productive.*

The Evolution high efficiency two-stage vacuum pump improves drying and reduces water usage compared to other vacuum systems. Additional sensors minimize water and steam consumption to help reduce operational costs.

Long-life Burkert valves for maximum uptime

Quick, flexible connections to utilities and drain. Available with stainless piping and triclamp fittings.

*Requires connection to the ProConnect Response Center.

Completely modular,
completely portable

Powerful 72 kw integrated
steam generator in carbon or
stainless steel

Two-stage vacuum
pump reduces water
consumption and provides
quick, quiet, consistent
chamber evacuation

The Amsco Evolution modular piping system provides your department with tangible benefits beyond the norm.

- > Quick, easy, flexible installation that conserves valuable department space
- > Maximum system uptime and productivity
 - Reliable, long-life components
 - Improved service accessibility
 - Proactive remote monitoring system
 - Improved drying
 - Available clean steam capability
- > Economical, green operation
 - High efficiency electric vacuum pump
 - Sensor technology minimizes utilities usage

AMSCO EVOLUTION – ACCESSORIES

Evolution can be accessorized to meet specific environmental and workflow requirements for maximum productivity and improved throughput in your Sterile Processing Department.

Door Options and Cabinet Packages

- > All models can be recessed in the wall or fully enclosed in a cabinet.
- > Evolution is available with manual hinged or fully automated door operation.

Hinged

Chamber Dimensions
26 x 37.5 x 42in
26 x 37.5 x 54in
26 x 37.5 x 66in

RELIANCE® VISION® SINGLE-CHAMBER WASHER/DISINFECTOR

APPLICATION

The Reliance Vision Single-Chamber Washer/Disinfector is intended for use in the cleaning and intermediate level disinfection of soiled reusable utensils, trays, glassware, bedpans and urinals, rubber and plastic goods, simple hard-surfaced rigid surgical instruments (such as forceps and clamps), theater shoes and other similar and related items found in healthcare facilities.

DESCRIPTION

The Reliance Single-Chamber Washer/Disinfector is a mechanical washer/disinfector equipped with an Allen-Bradley SoftLogix™ PC-based control system¹. Three chemical injection pumps are included in a standard washer/disinfector with up to two additional chemical injection pumps (accessories) available if desired. The washer is available in a double-door configuration.

The washer/disinfector is designed with five preprogrammed cycles (Instruments, Utensils, Plastic Goods, Gentle Cycle and Ortho.) and one decontamination cycle. The washer/disinfector also features 15 open cycles for customized programming to meet specific operating requirements.

Cycles operate through a combination of the following phases: Pre-Wash, Enzyme, Wash, Rinse, Thermal Rinse and Drying.

(Typical only - some details may vary.)

¹ SoftLogix™ is a trademark of Allen-Bradley, a Rockwell Automation Company.

The Selections Checked Below Apply To This Equipment

VOLTAGE*

Steam-Heated Washer/Disinfector

- 200/208 V, three-phase, 60 Hz
- 200/208 V, three-phase, 50 Hz
- 460/480 V, three-phase, 60 Hz
- 380/400/415 V, three-phase, 50 Hz

Electric-Heated Washer/Disinfector

- 460/480 V, three-phase, 60 Hz
- 380/400/415 V, three-phase, 50 Hz

ACCESSORIES**

- Two-Level Manifold Rack**
- Three-Level Manifold Rack**
- Four-Level Manifold Rack+
(Height: 22-1/4" [565 mm])**
- Four-Level Manifold Rack +
(Height: 23-3/4" [603 mm])**
- Five-Level Manifold Rack**
- Multi-Function Rack For Large Items
- Multi-Function Rack For Small Items
- Small Mesh Instrument Tray**

ACCESSORIES (CONT'D)**

- Flexible Hold-Down Screen**
- Universal Transfer Cart
- Transfer Cart
- Air Compressor
- Multi-Voltage Transformer
- Remote Control Extension,
50' (15 m) Load Side
- Remote Control Extension,
50' (15 m) Unload Side
- Side Exterior Panels
- Condensate Return Cool Down Kit
(For Steam-Heated Washer/Disinfector Only)
- Drain Discharge Cool Down Kit
- Seismic Tie-Down Kit
- Additional Chemical Pump
 - Pump 3 (For Polystyca® Ultra Concentrate Chemicals)
 - Pump 4 (For Other Detergents)

REMOTE MONITORING

- ProConnect® Response Center (Remote Monitoring, Priority Technical Support, Customer Care Center Access, Equipment Performance Reports) Available Only in U.S., Canada and Latin America.

OPTIONS

- Language Package
 - French
 - Spanish
- Process Data Validation System (PDVS)
- Control Enhancement System
- Non-Vented System
- 40 Amp Minimum Circuit Protection

* Careful consideration should be given to voltage selection prior to ordering. Later changes require substantial field modification.

** See separate product literature for material handling accessories.

+ Only compatible with Vision Single-Chamber Washer/Disinfectors.

Item _____

Location(s) _____

STANDARDS

This Reliance Vision Single-Chamber Washer/Disinfecter meets the applicable requirements of the following standards, **as certified by UL:**

- Underwriters Laboratories (UL) Standard UL 61010-1, Second Edition: 2005.
- Canadian Standards Association (CSA) CAN/CSA-C22.2 N° 61010-1, Second Edition.

Governing Directive for affixing of CE mark:

Medical Device Directive 93-42-EEC as amended by 2007-47-EC.

Standards applied to demonstrate conformity to directives:

IEC 61010-1; IEC 61326-1; IEC 61010-2-040;

ISO 15883-1* Washer-Disinfectors - General requirements, terms and definitions and tests;

ISO 15883-2* Washer-Disinfectors - Requirements and tests for washers-disinfectors employing thermal disinfection for surgical instruments, anaesthetic equipment, bowls, dishes, receivers, utensils, glassware, etc.

* *When the Process Data Validation System (PDVS) or the Control Enhancement System is present.*

SIZE (W x H x L)

Overall dimensions of a fully equipped washer/disinfecter:

42 x 80-3/4 x 32" (1067 x 2051 x 813 mm)

Loading height: 31" (787 mm) from the floor

Required ceiling height required: 94" (2388 mm) minimum

FEATURES

Washer is provided with two vertical airtight sliding doors

to facilitate accessory rack or basket entering and exiting the chamber. Doors are automatically operated by pneumatic cylinders. Doors are made of double tempered glass to allow the operator to view the chamber interior with the doors closed and, while the cycle is in progress, to safely touch the door.

The access panels permit easy access to the washer/disinfecter components for maintenance purposes.

The printer allows the operator to print process time, date and washer/disinfecter malfunction data. Specific information is printed from the Cycle mode (cycle in process parameters and alarms), Service mode (washer/disinfecter configuration values and setup) and Supervisor mode (supervisors list and supervisor setup).

Chemical injection pumps (three) are included in the standard washer/disinfecter with up to two additional chemical injection pumps (accessories) available if desired. The pumps are located in a separate room and connected to washer/disinfecter with up to 50' (15 m) of piping.

Pumps allow the use of the Prolystica® Ultra Concentrate chemicals. Each ultra concentrated product is 10 times the concentration of a traditional product, therefore 10 times less chemical is injected to properly process the cycles.

The peristaltic pumps automatically add a selected quantity of detergent. The pumps give flexibility to wash with a neutral process, an enzyme process, a dual alkaline/enzyme and enzyme/neutralizer process or to vary the chemical used depending upon the load. One pump is dedicated to lubricant or rinse aid to be injected during the Thermal Rinse phase.

Pumps automatically add:

- Ultra Concentrates: 1/40, 3/80, 1/20, 3/40 and 1/10 oz/gal (0.2 to 16 mL/L).
- Regular Chemicals: 1/8, 1/4, 3/8, 1/2, 3/4, 1/10, 1-1/2 and 2 oz/gal (0.2 to 16 mL/L).

A low-level sensor is included to indicate when the detergent level in the container is low or when insufficient chemical is available for the next cycle.

The control monitors the volume of chemicals injected and indicates if this parameter meets specified criteria during all specific phases.

An air inlet pre-filter and a High Efficiency Particulate Air (HEPA) filter are located behind upper access panel on unload side of washer/disinfecter. Chamber incoming air passes through the HEPA filter to prevent any contamination of the load.

The chamber is constructed of argon-welded 16-gauge #304 stainless steel (No. 4 finish). The chamber is of sanitary-type design for complete drainage. Some horizontal fixed surfaces are sloped, overlapping metal sheets are minimized to reduce hard-to-clean locations, round corners ease the self-cleaning of the sump. The bottom of the chamber is clear of any parts.

The chamber includes a light on the chamber ceiling to illuminate the chamber interior.

A removable debris screen is located in the chamber sump and can be accessed through the chamber load door for maintenance purposes. The debris screen prevents large debris from entering the piping system and pump. The screen is provided with a handle and is easily removed for cleaning under running water.

Rotary spray arm assemblies (two) are located in the chamber (one at the top and one at the bottom) and are positioned to reach all surfaces of the load. These redesigned rotary spray arm assemblies are easily assembled/disassembled and can be accessed through the chamber load door. The Total Coverage spray arm design provides a wider, more uniform area of coverage as compared to standard spray arms.

Stainless-steel pump is an open impeller pump powered by a dual-speed motor to allow two ranges of flow rate/pressure. High pump speed provides the equivalent capacity of an 11.7 hp (8.7 kW) motor and low pump speed provides the equivalent capacity of a 2.95 hp (2.2 kW) motor. Pump motor is a TEFC class H (totally enclosed fan cooled) motor, electro-polished and of sanitary features and is equipped with an overload protection and sealed bearings (not requiring periodic lubrication) with up to 100 psig (689 kPa) at pump outlet. Pump is of 316L stainless-steel construction.

Water Filtration System includes a unique self-cleaning centrifugal filter. After water passes through the sump filter (stopping larger debris and loose instrument parts) it continues through a centrifugal filter (removing smaller debris). This debris does not return to wash chamber or potentially plug spray arm assemblies and is automatically flushed the washer/disinfector between every cycle.

Heating coils (steam or electric) at the bottom of the chamber (sump) raises and maintains water temperature up to 180°F (82°C) during the Wash phase and up to 194°F (90°C) during the Thermal Rinse phase.

Double-walled, insulated construction of chamber exterior reduces heat loss and noise level (as low as 58.2 dB) to the work area.

A vented system is supplied enabling chamber vapors to be exhausted to the building exhaust system through a 3.0" (76 mm) OD vent connection located on top of the washer.

The drying system is a uniquely designed four-sided inflow drying pattern to produce a high-flow air curtain. This air-curtain provides broad, efficient, drying while using a combination of recycled and non-recycled air within wash chamber. Air is manifolded and circulated through the piping and accessory providing an energy efficient system ensuring a complete chamber air coverage. Fresh air is drawn through a HEPA filter. The drying system includes a 3 HP (2.2 kW) blower to remove vapor from chamber prior to the doors opening. Three heater elements totaling 15.8 HP (11.8 kW) heat maintain chamber air temperature.

Decontamination cycle is provided for weekly cleaning of the chamber, piping and accessories. Decontamination cycle is programmed at factory and cannot be modified by the operator.

Top utility connections facilitate installation. All utilities (except drain connections) are connected on the top of the washer/disinfector (refer to equipment drawing 920-508-564).

ProConnect Response Center - Minimize response time and minimize unscheduled downtime on your equipment. Secure, internet-based, 24/7 remote monitoring enables both Predictive Maintenance as well as instant alerts to STERIS when there is an equipment alarm. Also included are priority technical support, online parts ordering, equipment performance dashboards, and scheduling service at eservice.steris.com.

CYCLE DESCRIPTION

IMPORTANT: *STERIS does not intend, recommend or represent in any way that this Reliance Vision Single-Chamber Washer/Disinfector be used for the terminal disinfection or sterilization of any regulated medical device. The Reliance Vision Single-Chamber Washer/Disinfector is intended only to perform an initial step in the processing of soiled, reusable medical devices. If medical devices are contacting blood or compromised tissues, such devices must be terminally processed in accordance with device manufacturer's instructions and/or Good Hospital Practices before each use in human patients.*

Once cycle is selected, the washer/disinfector automatically processes the load through the following standard phases (when using Prolystica Ultra Concentrate):

- **Pre-Wash phase** – Cold or cold and hot water from building supply fills the chamber. The water is recirculated through the rotary spray arm assemblies for a selected time period. Water is drained upon phase completion. Up to four Pre-Wash phases can be selected per customized cycle.

- **Wash phase** – Cold and/ or hot water from building supply fills the chamber while detergent is automatically added at the beginning of the phase. The phase solution is recirculated through the rotary spray arm assemblies for a selected time period. If heated water is selected, water is heated by a steam or electric coil in the sump. Solution is drained upon phase completion. Up to four Wash phases can be selected per customized cycle.

If the second stage is selected, cold and/ or hot water from building supply fills the chamber at phase beginning. Load is washed for a selected time period (factory setting) with enzymatic cleaner-injected heated water (factory setting). After the selected time period, neutral detergent is injected while injected water is heated (factory-setting). Then, load is washed for a selected time period with both chemicals. Solution is drained upon completion. Up to four Wash phases can be selected per customized cycle.

- **Rinse phase** – Hot or pure water from building supply fills the chamber. The phase solution is recirculated through the rotary spray arm assemblies for a selected time period to rinse load and to cool chamber. Solution is drained upon completion. Up to four Rinse phases can be selected per customized cycle.

- **Thermal Rinse phase** – Hot or pure water from building supply fills the chamber. If needed, instrument lubricant or rinse aid is automatically added during the filling at phase beginning. This solution is recirculated through the rotary spray arm assemblies for a selected time period. Water is heated by a steam or electric coil in the sump. Water can be heated from 180 to 194°F (82.2 to 90°C). Solution is drained upon completion. Only one Thermal Rinse phase can be selected per customized cycle.

- **Drying phase** – Air is recirculated through the accessories and the chamber while a portion is exhausted to the vent for a selected time period. Air is also directed through manifolded racks for fast drying. Air can be heated at the LOW setpoint (180°F [82.2°C]) or at the HIGH setpoint (220°F [104.4°C]).

SAFETY FEATURES

Doors are equipped with a **door interlock safety mechanism** that prevents load side doors from opening at the same time as the unload side door to avoid cross-contamination. When a cycle is in progress, the **door interlock mechanism** prevents either door from being opened without aborting the cycle.

Chamber doors are equipped with an **obstruction sensor** to detect any door obstruction. If an obstruction is present, door automatically opens.

OPTIONAL FEATURES

Non-Vented System – Chamber vapors are exhausted through a condenser to the room. No additional duct work is required.

Control Enhancement System – The Reliance Vision Single-Chamber Washer/Disinfector can be fitted with an optional Control Enhancement System. This system monitors the parameters of the sump and drying temperature and indicates if the parameters are within the passing criteria during all specific phases.

This system also includes the Rotary spray arm assembly detection option.

The control generates alarms if data recorded independently is out of the passing criteria. This raises the level of confidence that the cycle has been successfully completed within predetermined parameters.

Process Data Validation System (PDVS) – The Reliance Vision Single-Chamber Washer/Disinfector can be fitted with an optional PDVS. This system documents and measures the parameters of the sump and drying temperature, the pump outlet pressure and the pure water supply conductivity (measured directly to the drain) to help ensure the parameters are within the passing criteria during all specific phases.

This system also includes the Rotary spray arms detection option.

The control generates alarms if data recorded independently is outside the range of the passing criteria. This raises the level of confidence that the cycle has been successfully completed within predetermined parameters.

Rotary Spray Arms Detection – The Rotary spray arms detection option is offered within the optional Control Enhancement System or the optional PDVS.

This feature detects if the chamber and accessory racks rotary spray arm assemblies are rotating freely while a cycle is in progress. If the rotary spray arms are not rotating freely, a warning is displayed on the touch screens. The operator then decides if the cycle should be aborted.

ACCESSORIES

Air compressor, complete with automatic tank drain and pressure switch, is available in either 110-115 V or 200-240 V, 50/60 Hz, single-phase. Oilless air compressor operates at 69 dB sound level. Wiring at installation not provided by STERIS.

Multi-Voltage Transformer is available for facilities requiring the following configurations:

- 600 V, three-phase, 60 Hz, steam or electric-heated;
- 240 V, three-phase, 60 Hz, steam or electric-heated;
- 200/208 V, three-phase, 60 Hz, electric-heated.

Use the multi-voltage transformer combined with a 480 V, three-phase, 60 Hz, steam or electric-heated washer/disinfector.

Drain discharge cool down ensures water drained at the end of each phase, from the chamber sump to the building drain system, does not exceed 140°F (60°C). If water temperature in sump is higher than 140°F (60°C), cold water is automatically added to reduce the water temperature discharged into the building drain system.

NOTE: This accessory can add up to 120 seconds to the standard drain time.

Condensate return cool down allows for the connection of a condensate return outlet to the drain when a condensate return line is not available in the building. Cold water is always injected in the drain piping when condensate is sent to drain line (or whenever steam valve is open). Condensate return cool down keeps the temperature in the drain piping below 140°F (60°C).

Remote control extensions allow the control to be relocated up to 50' (15 m) away from the washer/disinfector, and is available on the load or unload side.

Seismic anchorage system includes a seismic report for proper installing and securing of washer/disinfector to the building floor. Washer/disinfector is designed to comply with Seismic Zone 3 and 4 requirements.

Flexible hose for cannulated instruments provides easy access to flush up to four lumen devices per level (except top level) on the Vision Single Chamber racks except for the Five-Level rack that is supplied with two lumens per level (and none on top level). This accessory can be added and removed to meet user requirements.

Flexible hold-down screens (easy to use silicone hold-down accessories) are used in conjunction with Multi-Function rack for small items.

Vision Multi-Function Racks:

- For Small Items; is designed to hold small basins, small bowls, light handles, glass cups, etc. Rack can be placed on any level of the two- or three-level Vision Manifold rack.
- For Large Items; is designed to hold trays, basins, bowls, theatre shoes, baby bottles, bedpans, etc. Rack can be placed on lower level of the two-level Vision Manifold rack.

CONTROL SYSTEM

The user friendly PC control provides immediate feedback on all wash cycle critical parameters (including time, temperature, chemical injection and spray arm rotation [option required]).

The Allen-Bradley SoftLogix™ PC-based control system¹ monitors and controls washer/disinfector operations and functions while also monitoring washer/disinfector current status (including current chamber temperature and time remaining in phase).

The control system offers four operation modes: Ready, Cycle, Supervisor and Service. The Supervisor and Service modes are password protected while Ready and Cycle modes are always available.

Washer/disinfector is equipped with two control system touch screens: one on the load side and the other on the unload side.

1. SoftLogix™ is a trademark of Allen-Bradley, a Rockwell Automation Company.

Identical information is displayed on both touch screens. These screens are touch-sensitive color graphics screens. The operator can only silence the buzzer and open or close the unload door using the unload side touch screen. Other actions are performed using load side touch screen.

An audible warning system is provided to alert the operator when necessary.

Each cycle program is operator adjustable to meet specific processing needs. Cycle programming is protected by security access code set by supervisor.

The control system features preprogrammed temperature ranges for each cycle. If the operator selects an out-of-range temperature setting when modifying the cycle values, the control system alerts the operator with a message and halts further operation until the correct value is entered.

CONTROL VALUE SETTINGS

Supervisor-adjustable control settings:

- **Supervisor management** – configures the Supervisor name and password.
- **Cycle management** – edits cycle name and cycle parameter and also allows cycle selection.
- **Cycle description** – changes the name, icon and description of the current selected cycle.
- **Parameters** – changes the different cycle parameters.
- **Setup** – adjusts the washer/disinfector setup options.
- **Time set** – sets current time of day for displays and printouts.
- **Date set** – sets current date for displays/printouts.
- **Printer enabled** – enables the printer.
- **Hospital name** – modifies hospital name.
- **Department name** – modifies department name.
- **Chemical pump name** – modifies the name of all chemical pumps.
- **Temperature/pressure units** – selects the temperature unit as well as pressure units.
- **Control enhancement system (option)** – modifies control enhancement system parameters.
- **PDVS (option)** – modifies PDVS parameters.

INSTALLATION

The Reliance Vision Single-Chamber Washer/Disinfector is designed to be a freestanding unit. The minimum clearance between the finished floor and the ceiling is 94" (2388 mm). Once installed, the washer/disinfector is designed for easy access for maintenance purposes.

PREVENTIVE MAINTENANCE

Customers are encouraged to contact STERIS concerning annual maintenance programs. Under the terms of these programs, preventive maintenance, adjustments and replacement of worn parts are provided on a scheduled basis to help ensure optimal equipment performance and help

minimize untimely or costly schedule interruptions. STERIS maintains a worldwide staff of well-equipped, factory-trained technicians to provide these services, as well as on-site installation, training and expert repair services. Contact STERIS for details.

NOTES

1. Customers must ensure the washer/disinfector stands on a level, noncombustible floor.
2. STERIS recommends shutoff valves and vacuum breakers (not provided by STERIS) be installed on service lines.
3. STERIS recommends the illumination of the service area along with providing a convenience outlet for maintenance.
4. Clearances shown are minimal for installing and servicing the washer/disinfector.
5. Always follow local electrical codes and safety-related work practices for wiring.

UTILITY REQUIREMENTS

Important: Refer to equipment drawing 920-508-564 for details.

Telecommunications Requirements for ProConnect Response Center

- An active wired or wireless TCP/IP network, 10/100BaseT Ethernet connection at each piece of connected equipment, Internet access and an IP address on the facility network.
- 5 GB of available hard drive space to run the service agent. Can be installed on:
 - » Dedicated PC running Windows XP with 2.8GHz processor, 512MB of RAM
 - » Virtual Machine
 - » Server
- Local STERIS login at the PC with a username of STERIS and the password should be ProConnect (STERIS Customer Number).
- Ethernet cable to connect each piece of STERIS equipment and the dedicated PC to the facility network.
- 110V power receptacle at each piece of connected equipment.

CUSTOMER IS RESPONSIBLE FOR COMPLIANCE WITH APPLICABLE LOCAL AND NATIONAL CODES AND REGULATIONS.

The base language of this document is ENGLISH. Any translations must be made from the base language document.

APPLICATION

The SCS Conveyor System is a flexible, semi-automated (motorized and non-motorized conveyors) or fully automated, modular conveyor system intended to heighten facility productivity and efficiency. The conveyor system is designed to link compatible, multiple, single-chamber washers and/or multi-chamber washer/disinfectors in a closed loop system for hands-free handling of baskets and accessories used to process soiled reusable utensils, trays, glassware, bedpans and urinals, rubber and plastic goods, simple hard-surfaced rigid surgical instruments (such as forceps and clamps) and other similar and related articles found in healthcare and life sciences facilities.

(Typical only - some details may vary.)

DESCRIPTION

The SCS Conveyor System is designed to quietly (minimal operational sound level) load/unload 24 x 24" [610 x 610 mm] Amscomatic and Reliance® Series racks, and to interface with the following washers:

- Reliance® Genfore™ Washer/Disinfector
- Reliance® 444 Single-Chamber Washer/Disinfector (from S/N 3624500xxx)
- Reliance® 450 Glassware Washer (from S/N 3624502xxx)

NOTE: For Reliance 444 and Reliance 450 washers up to S/N 3624402xxx, call STERIS to verify if SCS Conveyor System can be made compatible.

- Reliance® Synergy® Washer Disinfector
- Reliance® Vision® Single-Chamber Washer/Disinfector
- Reliance® Vision® Multi-Chamber Washer/Disinfector (not compatible to Load/Unload conveyors)

The SCS Conveyor System also interfaces with the following transfer carts:

- FD21-800 (Reliance 444, 450, Synergy, Genfore and Vision Single-Chamber and Multi-Chamber)
- FD61-700 (Universal Transfer Cart).

STANDARDS

This **SCS Conveyor System** meets the applicable requirements of the following standards, **as certified by UL:**

- Underwriters Laboratories (UL) Standard UL 61010-1 Second Edition
- Canadian Standards Association (CSA) CAN/CSA C22.2 No. 61010-1 Second Edition

Governing Directive for the affixing of the CE mark:

- Machinery Directive 2006/42/EC

Standards applied to demonstrate conformity to the directives:

- International Standard IEC 61010-1 Second Edition
- International Standard IEC 61326-1:2005

Conformity to other applicable directives:

- Electromagnetic Compatibility 2004/108/EC
- Low Voltage 2006/95/EC

SIZE (W x H x L)

All dimensions listed are for individual modules.

Overall dimensions:

- 31-3/4 x 31 x 31-3/4" (806 x 787 x 806 mm)

Other dimensions (SCS-FA):

- SCS-FA or SCS-FAU With One Lift Gate
 - » 41-3/8 x 31 x 31-3/4" (1041 x 787 x 806 mm)
- SCS-FA or SCS-FAU With Two Lift Gates
 - » 51 x 31 x 31-3/4" (1295 x 787 x 806 mm)

Normal height:

- 31" (787 mm) from the floor
- Height adjustment (range):
- 29 to 33" (737 to 838 mm)

FEATURES

NOTE: Expert STERIS Systems Planners must assist in designing a configuration to an existing or new system, focusing on the most efficient use of equipment and space.

Each conveyor type (see Table 1) is equipped with either free or motorized rollers. For motorized rollers, the drive mechanism is provided by a 65 W gear motor.

The conveyor frame is constructed of #304 stainless steel (No. 4 finish). The **Plastic Side Guides** are made of 3/16" (5 mm) thick blue ABS plastic.

The pneumatic cylinders are used to push/pull racks in and out of the process chamber, or to index racks automatically from a SCS-FA or to a SCS-FAU. The pneumatic guides are used to stabilize racks on all sides during automated change of directions.

The proximity sensors automatically detect basket position and are designed to operate in a soiled/wet environment.

Drip pans, located under the conveyor surface, allow for rack drainage collection following the loading/unloading process. A drain opening (sized for 1-1/2" NPT female adaptor) is provided in the drip pan for connection to the facility drain line or fitted with a bottle to collect drainage.

An additional **Plastic Side Guide (SCS-03 or SCS-26)** is supplied to close a conveyor side if a Transfer Cart Adapter (**SCS-02 or SCS-29**, accessory) is not required.

A lift gate conveyor (SCS-E-LG or SCS-SE-LG) can be supplied and easily opened by the user to allow access to the other side of the conveyor layout loop (typically used with cabinet washers installed side-by-side). SCS-FA-ULG, SCS-FA-DLG, SCS-FA-2LG, SCS-FAU-ULG, SCS-FAU-DLG and SCS-FAU-2LG have built-in motorized lift gates.

A motorized return door (SCS-M-RD) can be supplied and easily opened by the user to allow access to the other side of the conveyor layout loop (typically used with cabinet washers installed side-by-side).

NOTE: The door is equipped with an obstruction sensor to detect any door obstruction. If an obstruction is present, door automatically opens.

SCS Conveyor Solutions (see Table 1) is a flexible, modular system that allows workflow designs to be created for efficient transport and ergonomic handling of racks. The solutions range from simple load/unload designs to fully automated conveyor designs.

SAFETY FEATURES

The SCS Conveyor System is equipped with one electrical power supply (mounted under conveyor frame) for each four powered conveyors. To de-energize conveyor layout, either turn power supplies to **OFF** and wait for green indicator lights to turn OFF or (for conveyor types interfaced with a Reliance Synergy unit) press **EMERGENCY STOP** pushbutton.

For SCS-FO, SCS-2W-FO, SCS-FA or SCS-FAU conveyor types interfaced with a Reliance 444 washer/disinfector, a Reliance 450 washer or a Reliance/Hamo Vision Single-Chamber washer/disinfector, a pressure-release pushbutton is supplied as an accessory.

NOTE: Conveyors are never turned OFF unless the conveyor power supply ON/OFF switch or facility circuit breaker is in OFF position.

ACCESSORIES

The SCS Conveyor System is designed with a complete package of accessories (see **Table 2**) to enable great design flexibility.

CONTROL SYSTEM

Each conveyor equipped with a feed-in (FI) or feed-out (FO) system to load or unload a washer/disinfector or any fully automated conveyor (SCS-FA or SCS-FAU) is equipped (see **Table 5**) with a PLC controller. Other automatic conveyor designs use relays and proximity sensors to detect baskets and/or racks and control operation.

INSTALLATION

The SCS Conveyor System is designed to be freestanding. The minimum clearance between the finished floor and the conveyor is 29" (737 mm). The minimum service clearance for the motorized conveyors (motorized side) is 10" (254 mm) if access is available on both sides of the conveyor; 17" (432 mm) if access is only on one side of the conveyor.

PREVENTIVE MAINTENANCE

Customers are encouraged to contact STERIS concerning annual maintenance programs. Under the terms of these programs, preventive maintenance, adjustments and replacement of worn parts are provided on a scheduled basis to help ensure optimal equipment performance and help minimize untimely or costly schedule interruptions. STERIS maintains a worldwide staff of well-equipped, factory-trained technicians to provide these services, as well as on-site installation, training and expert repair services. Contact STERIS for details.

NOTES

1. Conveyors are designed to give optimal results in an indoor environment where the temperature is maintained between

41-104°F (5-40°C) and maximum relative humidity is 80% for temperatures up to 88°F (31°C) decreasing linearly to 50% relative humidity at 104°F (40°C).

2. Workflow arrows affixed under each non two-way conveyor must point in correct direction.
3. STERIS recommends shutoff valves (not provided by STERIS) be installed on air lines and disconnect switches (not provided by STERIS) be installed on electrical supply lines.
4. Clearances shown are minimal for installing and servicing the SCS Conveyor System.
5. Always follow local electrical and plumbing codes and safety-related work practices.
6. Customer must ensure conveyor stands on a noncombustible, non-slip, level floor.
7. Height adjustment (range) is 29 to 33" (737 to 838 mm).
8. Maximum of four powered conveyors per power supply. Each conveyor is individually connected (in parallel).
9. Customers must decide if drains are required and what type of connections are required.
10. Expert Systems Planners from STERIS must assist in designing a configuration to an existing or new system focusing on the most efficient use of space.

UTILITY REQUIREMENTS

NOTE: Refer to Equipment Drawing 920-506-414 for installation details and specifications.

Weight:

- Maximum conveyor operating weight (including basket/rack and load weight) is 135 lb (61 kg)
- Shipping weight for non-motorized conveyors is 60 lb (27 kg)
- Shipping weight for motorized conveyors is 94 lb (43 kg)
- Shipping weight for fully automated conveyors is 130 lb (59 kg)

Air (Connected to Washer Supply):

- 1/4" NPT (1/4" BSPT), 80 (dynamic) to 125 (static) psig (550-860kPa). Refer to appropriate Tech Data (SD553, SD786, SD855, SD856, SD867, SD895, SD896 and SD880).
- Operating consumption of 1 scfm (1.8 m³/min). Refer to washer technical data.

Drain:

- 1-1/4" (32 mm). See NOTES.

Electricity:

- 100 V, one-phase, 60 Hz, 15 Amp
- 200-240 V, one-phase, 50/60 Hz, 15 Amp
- 200-480 V, three-phase, 50/60 Hz, 15 Amp

CUSTOMER IS RESPONSIBLE FOR COMPLIANCE WITH APPLICABLE LOCAL AND NATIONAL CODES AND REGULATIONS.

The base language of this document is ENGLISH. Any translations must be made from the base language document.

Table 6. Conveyor Accessories

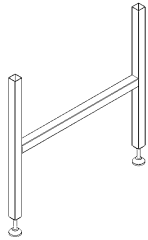

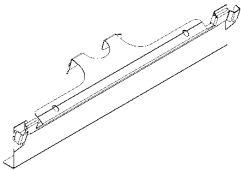

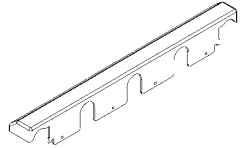

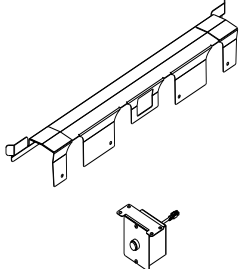

Accessory	Description
<p data-bbox="212 300 451 359">Legs with Anchorage (SCS-01)</p> 	<p data-bbox="532 300 1458 390">Compatible with 31" (787 mm) nominal load height washers. Also allow adjustable height to adjust to floor imperfections. Includes one set of legs, installation hardware and two leg anchors.</p>
<p data-bbox="212 705 451 764">Transfer Cart Adaptor (SCS-02)</p> 	<p data-bbox="532 705 1458 825">Adaptor compatible with all transfer carts. Allows basket to be transferred between transfer cart and conveyor safely by positioning transfer cart. When no cart is positioned against conveyor, spring mechanism raises adaptor which then acts as a guide or barrier to prevent basket from falling off.</p> <p data-bbox="532 835 1458 894"><i>NOTE: FD24-300 Transfer Carts require installation of an upgrade package to become compatible for this adaptor.</i></p>
<p data-bbox="212 989 451 1047">Plastic Side Guide (SCS-03 or SCS-19)</p> 	<p data-bbox="532 989 1458 1108">Plastic side guide to be installed on two-way conveyors located at the corners of the layout to guide baskets and prevent them from falling off open conveyor side. System layout shows where installation of this additional guide is required. Available in blue (SCS-03) or black (SCS-19).</p>
<p data-bbox="191 1245 485 1388">Connection Pack (Motorized Loading) - Reliance 444, Genfore or Synergy (SCS-04)</p>	<p data-bbox="532 1245 1458 1335">Includes necessary mechanical and electrical hardware to connect one motorized loading conveyor to one Reliance 444, Genfore or Synergy Washer/Disinfector. Also includes bar code reader.</p>
<p data-bbox="168 1419 500 1503">Additional Plastic Side Guide for SCS-FA (SCS-26)</p>	<p data-bbox="532 1419 1458 1503">Plastic side guide to be installed on SCS-FA located at the corners of the layout to guide baskets and prevent them from falling off open conveyor side. System layout shows where installation of this additional guide is required.</p>
<p data-bbox="168 1533 500 1652">Drive Side Transfer Cart Adaptor for SCS-FA with GO Pushbutton (SCS-27)</p> 	<p data-bbox="532 1533 1458 1591">Compatible with FD21-800 and FD61-700 transfer carts. Allows loaded baskets to be transferred to the downstream conveyor.</p> <p data-bbox="532 1602 1458 1661">The accessory includes a GO pushbutton switch and allows an empty basket to be moved from conveyor, or a full basket to be transported to the next conveyor.</p>

Table 6. Conveyor Accessories (Cont'd)

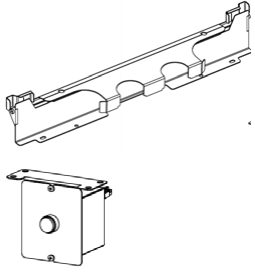

Accessory	Description
<p>GO Pushbutton for SCS-FA (SCS-28)</p> 	<p>The GO pushbutton accessory has two functions:</p> <ol style="list-style-type: none"> 1. Allows the operator to fill or empty a basket directly on the conveyor and to decide when to put the basket back in circulation in the conveyor line. 2. Allows the operator to control the circulation of the basket over the fully automated conveyors.
<p>Transfer Cart Adaptor for Non-Motorized Side on SCS-FA with GO pushbutton (SCS-29)</p> 	<p>Compatible with all transfer carts. Allows empty baskets to be unloaded from the conveyor line to the transfer cart. When no cart is positioned against conveyor, spring mechanism raises adaptor which then acts as a guide or barrier to prevent basket from falling off.</p> <p>This accessory includes a GO pushbutton switch and allows an empty basket to be removed from conveyor, or a full basket to be transported to the next conveyor.</p>
<p>Connection Pack (Non-Motorized Loading) - Reliance 444, Genfore or Synergy (SCS-05)</p>	<p>Includes necessary mechanical and electrical hardware to connect one non-motorized loading conveyor to one Reliance 444, Genfore or Synergy Washer/Disinfector. Also includes bar code reader.</p>
<p>Connection Pack - Vision Multi-Chamber (SCS-06)</p>	<p>Includes necessary mechanical and electrical hardware to connect one loading conveyor (motorized or non-motorized) and one unloading conveyor (motorized or non-motorized) to one Reliance/Hamo Vision Multi-Chamber Washer/Disinfector.</p>
<p>Seismic Anchorage Pack (SCS-07)</p>	<p>Hardware to anchor one set of legs to meet seismic requirements for installation in regions prone to earthquakes. Refer to <i>Seismic Anchorage Report</i> (920-507-203) for details.</p>
<p>Electrical Power Supply (SCS-08)</p>	<p>Electrical power supply required to produce 24 Vdc for up to four motorized conveyors and/or non-motorized conveyors with feed-out. Installation kit contains one electrical power supply box, two supports, 125 ft (38 m) of electrical cable and four connectors (for 24 Vdc). Cable is to be cut to length and used exclusively to connect electrical power supply to the conveyor(s).</p>
<p>Pressure-Release Pushbutton (SCS-09)</p>	<p>Includes one pressure-release pushbutton and pneumatic hoses to be installed on one SCS-FO or one SCS-2W-FO conveyor interfaced with either a Reliance 444 or Reliance 450 Unit.</p>
<p>Drain Flexible Hose Connection Pack (SCS-10)</p>	<p>Includes one flexible hose (3/4" dia) and necessary hardware for drain connection of up to four conveyors.</p>
<p>Connection Pack (Non-Motorized Loading and Non-Motorized Unloading) to One Reliance 444, Genfore or Synergy (SCS-11)</p>	<p>Includes necessary mechanical and electrical hardware to connect one non-motorized loading conveyor and one non-motorized unloading conveyor to one Reliance 444, Genfore or Synergy Washer/Disinfector. Also includes bar code reader.</p>

Table 6. Conveyor Accessories (Cont'd)

Accessory	Description
Connection Pack (Motorized Loading) – Reliance/Hamo Vision Single-Chamber (SCS-12)	Includes necessary mechanical and electrical hardware to connect one motorized loading conveyor to one Reliance/Hamo Vision Single-Chamber Washer/Disinfector. Also includes bar code reader.
Connection Pack (Non-Motorized Loading) – Reliance/Hamo Vision Single-Chamber (SCS-13)	Includes necessary mechanical and electrical hardware to connect one non-motorized loading conveyor to one Reliance/Hamo Vision Single-Chamber Washer/Disinfector. Also includes bar code reader.
Connection Pack (Non-Motorized Loading and Non-Motorized Unloading) to One Reliance/Hamo Vision Single-Chamber (SCS-14)	Includes necessary mechanical and electrical hardware to connect one non-motorized loading conveyor and one non-motorized unloading conveyor to one Reliance/Hamo Vision Single-Chamber Washer/Disinfector. Also includes bar code reader.
Recess Installation Pack for Motorized Return Door (SCS-15)	Includes necessary mechanical hardware for a motorized return door installed along a Vision Single-Chamber washer/disinfector which is installed flush with the cleaned side wall.

GENERAL NOTES – APPLICABLE TO STERILIZER EQUIPMENT DRAWINGS

INTRODUCTION

Each equipment drawing (enclosed) pertains to the sterilizing equipment as specified or purchased by you. These general notes and recommendations are intended to complement the equipment drawing(s) and thereby further assist you in achieving satisfactory installation of the equipment. The information on this and the enclosed drawing(s) is based upon the design and construction of the equipment as of the date of the drawing.

SPACE CONSIDERATIONS

Clearances

The clearance dimensions shown on each drawing are the minimum considered necessary to allow space for servicing and operating the equipment.

Clearance in front of sterilizer, for comfortable loading and unloading operations, should equal about twice the inside length of the sterilizer chamber unless otherwise specified on Equipment Drawing.

Dimensions

Attention must be given to all *printed dimensions* shown on each drawing, since no attempt has been made to hold these drawings to any specific scale.

MOUNTING DETAILS

Wall Thickness - Recessed Sterilizer

STERIS must be advised of the total finished thickness of the wall or walls through which the sterilizer will extend.

Wall Thickness – Amsco® Modular Wall

If the drawing pertains to an **Amsco Modular Wall**, STERIS must be advised of the overall width and height of the wall opening that the modular wall is to cover.

Recessing Cubicle

- **Ventilation.** It is recommended that a louvered, grilled opening be provided in the curtain wall above the sterilizer(s) to dispel excess vapor by negative pressure behind the wall. If **Amsco Modular Wall** has been specified, this opening will not be required.

The recessing cubicle should be adequately ventilated to maintain temperature in the range of 80° to 90°F (27° to 32°C) when the equipment is in operation.

- **Access.** Access to recessed service area from control end of the sterilizer is recommended.
- **Illumination.** Illumination designed to afford 50 to 100 footcandles of total illumination, evenly distributed in principal areas of the recessing cubicle, should be provided.
- **Service Power Requirement.** One convenience outlet (110-120 Volts) is required for power tools.
- **Drainage.** A floor drain or floor sink is recommended for each cubicle and should be provided within confines of sterilizer framework.

Space Between Recessed Sterilizers

For a multiple (composite) sterilizer installation through a constructed wall (not Amsco Modular Wall), a minimum of 10" (254 mm) clearance between the front panels is recommended.

Cabinet-enclosed Sterilizer

Cabinet-enclosed units should be located in a well-ventilated room from which heat and steam vapors may be dispelled rapidly. A separate floor drain is recommended for each cabinet-enclosed sterilizer, to be located within the confines of the sterilizer framework.

UTILITY SERVICE REQUIREMENTS

Roughing-in

All lines should be short-stubbed through the floor, wall or ceiling, far enough to permit coupling with stop valves. Provisions must be made for short-swing connections to equipment terminals. Piping outlets (stubbing) for equipment mounted in combination (composite installations) should be combined in one common set, usually at rear of the equipment.

It is recommended that pipes and conduit *not* be stubbed through the floor under the chamber of a recessed sterilizer. This recommendation would not preclude the stubbing of pipes and conduit through the floor within the confines of the *panels* on a cabinet-enclosed sterilizer.

Terminal Fittings

Unless otherwise specified in the contract or purchase order, piping and other appurtenances between terminal fittings on the equipment and wall or floor outlets (stubbing) are not furnished by STERIS.

Pipe Sizes

Pipe sizes listed on equipment drawing indicate the equipment termination sizes only. Size of supply piping is dependent on length of pipe run from pressure regulating station for steam line and main water headers, to ensure adequate supply service pressure and demand flow at equipment terminals. Effect of coincident draw of multiple unit installations must also be considered.

Pressure Relief Valves

STERIS recommends piping all chamber relief valves to a vented manifold outside the equipment service area. Caution must be exercised not to reduce the discharge capacity of the relief valve. Plumbing must be such that removal of sterilizer parts, including relief valve, does not require unsoldering or cutting of new piping.

Recommended piping practices for relief valve piping can be found in ASME Boiler and Pressure Vessel Code (Section VIII, Para. UG-135).

Backflow Preventer

If local codes require a reduced pressure principle device on water supply line, it shall be provided by others.

Blow Down Valve

Recommend provisions of blow down valve at each steam and water strainer to enable strainer clean out.

Blow down building steam and water supply lines before final connection to equipment.

Shutoff Valves

Provide piping shutoff valve, pipe plugged tee and union in steam and water supply connections between equipment and stub outs, so that the unit can be serviced without interruptions of supply to other equipment. Plugged tee can be used later for test

pressure gauge connection. Arrange connection piping to allow access to machine components and electrical control panel.

Steam and Water Pressures

Steam and water pressures indicated on each drawing are to be dynamic at the sterilizer.

Steam should be condensate free and between 97 and 100% saturated vapor to ensure proper goods drying.

Sterilizer is adequately equipped to operate on the pressures listed in the equipment drawing. If supply line pressure exceeds those shown, provide reducing valves. These are not furnished by STERIS unless specifically called for in the contract or purchase order.

Water Quality

- **Water Supply to Sterilizer.** Water is used for ejectors, heat exchangers and trap cooling. Refer to Table 1 for recommended water quality. Use of feed water within the nominal conditions will optimize equipment performance and reduce maintenance.

- **Carbon Steel Steam Generator Feed Water.** Refer to Table 2 for required water quality. Use of feed water within the nominal conditions will optimize equipment performance and reduce maintenance.

- **Stainless Steel Steam Generator Feed Water.** Requires dionized, distilled or reverse osmosis water with minimum resistivity of 1 megohm/cm.

NOTE: Do not connect tap water to stainless steel generator. Use of water not meeting the required feed water quality will invalidate the warranty, and is a violation of ASME boiler codes.

Condition	Nominal Conditions	Maximum Conditions
Temperature	40-60°F (4-16°C)	70°F (21°C)
Total Hardness as CaCO ₃ *	50-120 mg/L	171 mg/L
Total Dissolved Solids	100-200 mg/L	500 mg/L
Total Alkalinity as CaCO ₃	70-120 mg/L	180 mg/L
pH	6.8-7.5	6.5-8.5
Total Silica	0.1 - 1.0 mg/L	2.5 mg/L

* 17.1 mg/L = 1 grain hardness

Condition	Nominal Conditions	Maximum Conditions
Temperature	140°F (60°C)	40-140°F (4-60°C)
Total Hardness as CaCO ₃ *	0-17 mg/L	130 mg/L
Total Dissolved Solids	50-150 mg/L	250 mg/L
Total Alkalinity as CaCO ₃	50-100 mg/L	180 mg/L
pH	6.8-7.5	6.5-8.5
Total Silica	0.1 - 1.0 mg/L	2.5 mg/L
Resistivity - ohms/cm**	2000-6000	26000

* 17.1 mg/L = 1 grain hardness

** **WARNING - BURN HAZARD:** Sterilizer operator may be severely burned by scalding water if the water level control malfunctions. The steam generator level control may malfunction if the supply water exceeds 26,000 ohms/cm (38.5 micro-mhos conductivity min.). Do not connect to treated water (e.g., distilled, reverse osmosis, deionized) unless water resistivity is determined to be acceptable. If water exceeds 26,000 ohms/cm, contact STERIS Engineering Service for information concerning modifications required to the generator control system.

Table 3. Recommended Cold Feed Water Quality for Washers

Nominal Conditions	Nominal Conditions	Maximum Conditions
Temperature	40-60°F (4 - 16°C)	70°F (16°C)
Total Dissolved Hardness as CaCO ₃	50-80 mg/L	120 mg/L
Total Dissolved Solids	100-200 mg/L	500 mg/L
Total Alkalinity as CaCO ₃	70-120mg/L	180 mg/L
pH	6.8-7.0	7.5
Total Silica	0.1 - 0.5 mg/L	1.0 mg/L

Table 4. Recommended Hot Feed Water Quality for Washers

Nominal Conditions	Nominal Conditions	Maximum Conditions
Temperature	110°F (43°C)	150°F (66°C)
Total Dissolved Hardness as CaCO ₃	50-80 mg/L	120 mg/L
Total Dissolved Solids	100-200 mg/L	500 mg/L
Total Alkalinity as CaCO ₃	70-120mg/L	180 mg/L
pH	6.8-7.0	7.5
Total Silica	0.1 - 0.5 mg/L	1.0 mg/L

Table 5. Recommended Pure Water Feed Water Quality for Washers

Nominal Conditions	Nominal Conditions	Maximum Conditions
Temperature	60°F (16°C)	140°F (60°C)
pH	7.0	6.8-7.5
Resistivity-Ohms/cm	0.5 Meg-Ohm/cm	0.1 Meg-Ohm/cm

Table 6. Recommended Clean Dry Compressed Air Quality for Washers

Nominal Conditions	Nominal Conditions	Maximum Conditions
Maximum Particle Size	20 Micron	40 Micron
Particulate Density	5.0 ppm	8.3 ppm
Dew Point	37°F (3°C)	45°F (7°C)
Oil Concentration	10 mg/cubic-m	25 mg/cubic-m
Air Pressure	80-100 PSIG Dynamic	125 PSIG Dynamic

Water Quality Supplied to Washer

- Cold Water Supply to Washer–Cold water is used for pre-wash , chamber steam vapor condensing, and for cooling hot water or steam condensate going to the drain. Use of feed water quality within the nominal conditions will improve pre-wash of instruments or utensils, optimize equipment performance, and reduce maintenance.
- Hot Water Supply to Washer–Hot water is used for wash phase and rinse phase. Use of feed water quality within the nominal conditions will improve detergent performance, reduce chamber scale build-up, optimize equipment performance, and reduce maintenance.
- Pure Water Supply to Washer–Pure water is used during the final rinse phase. Use of feed water quality

within the nominal conditions will reduce spotting on instruments, reduce chamber scale build-up, optimize equipment performance , and reduce maintenance.

Compressed Air Supplied to Washer

- Compressed air is used for operating pneumatically controlled water or steam valves, operating opening and closing of doors, and operating conveyor mechanisms. Use of compressed air quality within the nominal conditions will provide optimal pneumatic device performance, prevent internal pneumatic device corrosion, and reduce maintenance.

Steam Condensate Return from Washer

- Steam condensate is the by product from heating water and from drying circulated air within the washer. The steam heating process is done through means of heat exchanger coils whereby the steam supply does not make direct contact with the media processed within the washer. The steam condensate from the process will be of equivalent water quality in the facility steam boiler whereby it may be recycled. If the steam condensate is not to be recycled, it may be directed to the floor drain through use of optional steam condensate cool down equipment modification packages.

For best washer heating and drying performance, it is required to direct the steam condensate return to a non-pressurized vented enclosure* to prevent back pressure against the incoming steam supply to the washer. Steam condensate return piping vertical rises in excess of 17 feet can also create excess back pressure which can hinder the heating process.

* *NOTE: Typical vented condensate return enclosures or sumps have internal float mechanisms that activate a water pump to return the condensate to the facility boiler.*

Venting Sterilizer To Atmosphere

If sterilizer has an atmospheric vent fitting (in lieu of a condenser), it should be connected to a vertical, unrestricted atmospheric vent stack. When more than one sterilizer is connected to a single vent stack, a self-draining header may be used. At no time should any riser from the sterilizer exhaust terminal to the header or vent stack be less than 45° to the horizontal. If more than one sterilizer is connected by header to riser, header is to drain toward sterilizer at 45° angle. Header and riser are to increase in size accordingly.

Wiring Terminals

Wiring on the equipment terminates at a junction box or boxes as shown on each drawing. Wiring and other appurtenances between junction box (or boxes) and building service lines are not furnished by STERIS.

Disconnect Switches

Disconnect switches with off position lockout only must be furnished and installed by the Customer in electric supply lines near the equipment.

Steam Return Lines

Steam return lines from the sterilizer jacket should be connected to a gravity system piped to a vented receiver. Avoid any piping arrangement that could cause back pressure in the return line. (This would not apply if steam return lines were specified to be piped into the sterilizer condenser system or waste line.)

Motors

In providing electric service for motors, conductors should be sized to conform to the National Electrical Code specifications for rated motor current and motor branch circuit capacity, adjusted for ambient temperature conditions (for 3/4 HP and over) and voltage drop.

IMPORTANT

STERIS assumes no responsibility for changes made necessary through failure to explicitly observe these instructions and recommendations. In all instances, local, county, state, and national regulations should be observed.

NOTE: Because of STERIS's continuing program of research and development, all specifications and descriptions are subject to change without notice. Some options may affect utility consumptions. Obtain approved drawings for design and installation.

GENERAL NOTES – APPLICABLE TO STERILIZER EQUIPMENT DRAWINGS

INTRODUCTION

Each equipment drawing (enclosed) pertains to the sterilizing equipment as specified or purchased by you. These general notes and recommendations are intended to complement the equipment drawing(s) and thereby further assist you in achieving satisfactory installation of the equipment. The information on this and the enclosed drawing(s) is based upon the design and construction of the equipment as of the date of the drawing.

SPACE CONSIDERATIONS

Clearances

The clearance dimensions shown on each drawing are the minimum considered necessary to allow space for servicing and operating the equipment.

Clearance in front of sterilizer, for comfortable loading and unloading operations, should equal about twice the inside length of the sterilizer chamber unless otherwise specified on Equipment Drawing.

Dimensions

Attention must be given to all *printed dimensions* shown on each drawing, since no attempt has been made to hold these drawings to any specific scale.

MOUNTING DETAILS

Wall Thickness - Recessed Sterilizer

STERIS must be advised of the total finished thickness of the wall or walls through which the sterilizer will extend.

Wall Thickness – Amsco® Modular Wall

If the drawing pertains to an **Amsco Modular Wall**, STERIS must be advised of the overall width and height of the wall opening that the modular wall is to cover.

Recessing Cubicle

- **Ventilation.** It is recommended that a louvered, grilled opening be provided in the curtain wall above the sterilizer(s) to dispel excess vapor by negative pressure behind the wall. If **Amsco Modular Wall** has been specified, this opening will not be required.

The recessing cubicle should be adequately ventilated to maintain temperature in the range of 80° to 90°F (27° to 32°C) when the equipment is in operation.

- **Access.** Access to recessed service area from control end of the sterilizer is recommended.
- **Illumination.** Illumination designed to afford 50 to 100 footcandles of total illumination, evenly distributed in principal areas of the recessing cubicle, should be provided.
- **Service Power Requirement.** One convenience outlet (110-120 Volts) is required for power tools.
- **Drainage.** A floor drain or floor sink is recommended for each cubicle and should be provided within confines of sterilizer framework.

Space Between Recessed Sterilizers

For a multiple (composite) sterilizer installation through a constructed wall (not Amsco Modular Wall), a minimum of 10" (254 mm) clearance between the front panels is recommended.

Cabinet-enclosed Sterilizer

Cabinet-enclosed units should be located in a well-ventilated room from which heat and steam vapors may be dispelled rapidly. A separate floor drain is recommended for each cabinet-enclosed sterilizer, to be located within the confines of the sterilizer framework.

UTILITY SERVICE REQUIREMENTS

Roughing-in

All lines should be short-stubbed through the floor, wall or ceiling, far enough to permit coupling with stop valves. Provisions must be made for short-swing connections to equipment terminals. Piping outlets (stubbing) for equipment mounted in combination (composite installations) should be combined in one common set, usually at rear of the equipment.

It is recommended that pipes and conduit *not* be stubbed through the floor under the chamber of a recessed sterilizer. This recommendation would not preclude the stubbing of pipes and conduit through the floor within the confines of the *panels* on a cabinet-enclosed sterilizer.

Terminal Fittings

Unless otherwise specified in the contract or purchase order, piping and other appurtenances between terminal fittings on the equipment and wall or floor outlets (stubbing) are not furnished by STERIS.

Pipe Sizes

Pipe sizes listed on equipment drawing indicate the equipment termination sizes only. Size of supply piping is dependent on length of pipe run from pressure regulating station for steam line and main water headers, to ensure adequate supply service pressure and demand flow at equipment terminals. Effect of coincident draw of multiple unit installations must also be considered.

Pressure Relief Valves

STERIS recommends piping all chamber relief valves to a vented manifold outside the equipment service area. Caution must be exercised not to reduce the discharge capacity of the relief valve. Plumbing must be such that removal of sterilizer parts, including relief valve, does not require unsoldering or cutting of new piping.

Recommended piping practices for relief valve piping can be found in ASME Boiler and Pressure Vessel Code (Section VIII, Para. UG-135).

Backflow Preventer

If local codes require a reduced pressure principle device on water supply line, it shall be provided by others.

Blow Down Valve

Recommend provisions of blow down valve at each steam and water strainer to enable strainer clean out.

Blow down building steam and water supply lines before final connection to equipment.

Shutoff Valves

Provide piping shutoff valve, pipe plugged tee and union in steam and water supply connections between equipment and stub outs, so that the unit can be serviced without interruptions of supply to other equipment. Plugged tee can be used later for test

pressure gauge connection. Arrange connection piping to allow access to machine components and electrical control panel.

Steam and Water Pressures

Steam and water pressures indicated on each drawing are to be dynamic at the sterilizer.

Steam should be condensate free and between 97 and 100% saturated vapor to ensure proper goods drying.

Sterilizer is adequately equipped to operate on the pressures listed in the equipment drawing. If supply line pressure exceeds those shown, provide reducing valves. These are not furnished by STERIS unless specifically called for in the contract or purchase order.

Water Quality

- **Water Supply to Sterilizer.** Water is used for ejectors, heat exchangers and trap cooling. Refer to Table 1 for recommended water quality. Use of feed water within the nominal conditions will optimize equipment performance and reduce maintenance.

- **Carbon Steel Steam Generator Feed Water.** Refer to Table 2 for required water quality. Use of feed water within the nominal conditions will optimize equipment performance and reduce maintenance.

- **Stainless Steel Steam Generator Feed Water.** Requires dionized, distilled or reverse osmosis water with minimum resistivity of 1 megohm/cm.

NOTE: Do not connect tap water to stainless steel generator. Use of water not meeting the required feed water quality will invalidate the warranty, and is a violation of ASME boiler codes.

Condition	Nominal Conditions	Maximum Conditions
Temperature	40-60°F (4-16°C)	70°F (21°C)
Total Hardness as CaCO ₃ *	50-120 mg/L	171 mg/L
Total Dissolved Solids	100-200 mg/L	500 mg/L
Total Alkalinity as CaCO ₃	70-120 mg/L	180 mg/L
pH	6.8-7.5	6.5-8.5

Water Quality Supplied to Washer

- Cold Water Supply to Washer–Cold water is used for pre-wash , chamber steam vapor condensing, and for cooling hot water or steam condensate going to the drain. Use of feed water quality within the nominal conditions will improve pre-wash of instruments or utensils, optimize equipment performance, and reduce maintenance.
- Hot Water Supply to Washer–Hot water is used for wash phase and rinse phase. Use of feed water quality within the nominal conditions will improve detergent performance, reduce chamber scale build-up, optimize equipment performance, and reduce maintenance.
- Pure Water Supply to Washer–Pure water is used during the final rinse phase. Use of feed water quality

within the nominal conditions will reduce spotting on instruments, reduce chamber scale build-up, optimize equipment performance , and reduce maintenance.

Compressed Air Supplied to Washer

- Compressed air is used for operating pneumatically controlled water or steam valves, operating opening and closing of doors, and operating conveyor mechanisms. Use of compressed air quality within the nominal conditions will provide optimal pneumatic device performance, prevent internal pneumatic device corrosion, and reduce maintenance.

Steam Condensate Return from Washer

- Steam condensate is the by product from heating water and from drying circulated air within the washer. The steam heating process is done through means of heat exchanger coils whereby the steam supply does not make direct contact with the media processed within the washer. The steam condensate from the process will be of equivalent water quality in the facility steam boiler whereby it may be recycled. If the steam condensate is not to be recycled, it may be directed to the floor drain through use of optional steam condensate cool down equipment modification packages.

For best washer heating and drying performance, it is required to direct the steam condensate return to a non-pressurized vented enclosure* to prevent back pressure against the incoming steam supply to the washer. Steam condensate return piping vertical rises in excess of 17 feet can also create excess back pressure which can hinder the heating process.

* *NOTE: Typical vented condensate return enclosures or sumps have internal float mechanisms that activate a water pump to return the condensate to the facility boiler.*

Venting Sterilizer To Atmosphere

If sterilizer has an atmospheric vent fitting (in lieu of a condenser), it should be connected to a vertical, unrestricted atmospheric vent stack. When more than one sterilizer is connected to a single vent stack, a self-draining header may be used. At no time should any riser from the sterilizer exhaust terminal to the header or vent stack be less than 45° to the horizontal. If more than one sterilizer is connected by header to riser, header is to drain toward sterilizer at 45° angle. Header and riser are to increase in size accordingly.

Wiring Terminals

Wiring on the equipment terminates at a junction box or boxes as shown on each drawing. Wiring and other appurtenances between junction box (or boxes) and building service lines are not furnished by STERIS.

Disconnect Switches

Disconnect switches with off position lockout only must be furnished and installed by the Customer in electric supply lines near the equipment.

Steam Return Lines

Steam return lines from the sterilizer jacket should be connected to a gravity system piped to a vented receiver. Avoid any piping arrangement that could cause back pressure in the return line. (This would not apply if steam return lines were specified to be piped into the sterilizer condenser system or waste line.)

Motors

In providing electric service for motors, conductors should be sized to conform to the National Electrical Code specifications for rated motor current and motor branch circuit capacity, adjusted for ambient temperature conditions (for 3/4 HP and over) and voltage drop.

IMPORTANT

STERIS assumes no responsibility for changes made necessary through failure to explicitly observe these instructions and recommendations. In all instances, local, county, state, and national regulations should be observed.

NOTE: Because of STERIS's continuing program of research and development, all specifications and descriptions are subject to change without notice. Some options may affect utility consumptions. Obtain approved drawings for design and installation.

Excellence

In Liquid Chemical Sterilization.

STERIS has over 21 years of experience with liquid chemical sterilant technology and oxidative chemistries. SYSTEM 1E has excellent material compatibility and has extensive critical and semi-critical heat-sensitive medical device reprocessing capability, including flexible multi-channel, surgical endoscopes. Providing a high standard of patient care, whether it's in your OR or GI department, SYSTEM 1E will help you reprocess with confidence.

The SYSTEM 1E Liquid Chemical Sterilant Processing System provides peace of mind and high-speed turnaround of validated rigid and flexible heat-sensitive devices.

Efficiency

Faster turnaround saves you time.

Integral in the perioperative loop, SYSTEM 1E™ Liquid Chemical Sterilant Processing System is designed to improve the flow of the OR. After cleaning, you're ready for the next procedure in 23 minutes. Immediate, point-of-use processing helps to assure an efficient OR with:

- Increased productivity
- Reduced resources
- Minimal costly inventory
- Maximum surgical procedures

Robust filtration systems and a UV irradiation unit extensively treat potable water for the liquid chemical sterilization process.

Ease

Simple 3-step process for an on-time start.

Maintaining a tight schedule in the OR suite demands quick access. Liquid chemical sterilization provides reprocessing ease for clean, reusable, immersible and heat-sensitive critical and semi-critical devices. S40 Sterilant Concentrate is a powerful liquid chemical sterilant that eliminates all microbial life. Its compact footprint makes SYSTEM 1E convenient and ideal for a variety of locations.

Simple 3-step instrument reprocessing streamlines the use to reuse turn-around time.

Environment

Environmentally friendlier for the OR.

The use-dilution has a neutral pH, and rinses safely down the drain. SYSTEM 1E performs 2 quick rinse cycles, reducing energy and water consumption.

S40 Sterilant Concentrate

Ensure

The SYSTEM 1E Liquid Chemical Sterilant Processing System helps you assure a consistent process.

- Productive
- Prevention
- Protection
- Peace of mind

Running a 23-minute cycle, SYSTEM 1E™ minimizes device downtime between patients. Two pre-filters, UV irradiation and a MaxPure™ filter work in harmony with S40 Sterilant Concentrate as a validated process for critical and semi-critical, heat-sensitive devices. The use-dilution is gentler on delicate surgical instruments, including multi-channel flexible endoscopes.

Extensively treated water flows continuously through the internal MaxPure filter throughout the exposure and rinse phases.

Entrust

From the trusted innovator & leader in Liquid Chemical Sterilization.

STERIS understands medical device reprocessing in the perioperative loop and anticipates your needs and provides responsive solutions to help you achieve your clinical objective.

- Increase productivity
- Reduce inventory
- Start and finish surgical procedures on time
- Save resources
- Save time

As a world leader with a heritage of infection control and sterilization technologies for over 100 years, STERIS helps provide a healthier today and safer tomorrow.

APPLICATION

For rapid, safe, standardized low-temperature sterile processing of immersible surgical and diagnostic devices.

DESCRIPTION

System consists of the SYSTEM 1® EXPRESS Processor and S40 Sterilant Concentrate.

The **SYSTEM 1 EXPRESS Processor** is an automated, tabletop, microcomputer-controlled device which maintains the process parameters necessary to ensure standardized and effective sterile processing. The entire sterile process takes place within the Processor's environmentally sealed chamber at or near the site of the patient procedure. Devices can be processed in less than 18 minutes*, just in time for use, thus minimizing device downtime between patient procedures. Processing temperatures do not exceed the safe temperature limits that most manufacturers recommend to ensure protection of heat-sensitive devices. At the completion of each cycle, a comprehensive printout documents the process and load information.

* Actual cycle time may vary due to water pressure, incoming water temperature or filter status.

S40 Sterilant Concentrate's active ingredient is peracetic acid, an effective liquid chemical sterilant. The proprietary formulation also contains chemicals which buffer the use dilution to an approximately neutral pH. The chemicals reduce the potential for corrosion or degradation of the devices being processed.

NOTE: Contact your STERIS Representative for S40 Sterilant Concentrate ordering information (20 single-use containers per case).

STANDARDS

Each Processor meets applicable requirements of the following standards, and carries the appropriate symbols:

- **IEC 61010-1, Second Edition; IEC 61010-2-040** – Safety Requirements for Electrical Equipment

(Typical – details may vary.)

- **IEC 60601-1-2, Third Edition** – Electromechanical Compatibility of Medical Electrical Equipment
- **Canadian Standards Association (CSA) Standard C-22.2 No.61010-1, Second Edition**
- **EU Medical Device Directive 1993/42/EC**, as amended by 2007/47/EC.
- **ISO 14937:2009** – Sterilization of healthcare products, General requirements for characterization of a sterilizing agent and the development, validation and routine control of a sterilization process for medical devices

STERILE PROCESS MONITORING

NOTE: As with any reprocessing method, effective sterile processing in the SYSTEM 1 EXPRESS Processor requires proper cleaning, preparation and placement of devices. Prior to processing any device in SYSTEM 1 EXPRESS Processor, the user must ensure that the reprocessing instructions provided by both the device manufacturer and STERIS are completely understood and followed.

When used as directed, the microprocessor controlled Sterile Cycle ensures that all devices are processed in exactly the same manner. Each cycle printout provides documentation on whether the parameters for sterilization have been met. Chemical Monitoring Strips are designed to detect the

presence of the active ingredient in the use dilution during each processing cycle. Biological Monitoring Kits are also available.

The **Diagnostic Cycle** provides validation of Processor integrity.

NOTE: Contact your STERIS Representative to order Chemical Monitoring Strips and Biological Monitoring Kits. (For use with SYSTEM 1 EXPRESS – Not for sale or use in U. S. A.)

FEATURES

Processor chamber holds the Processing Trays and Containers for the devices to be sterilized. The chamber door is opened manually by a release latch/handle. A window in the chamber lid allows the operator to observe cycle progress. Preparation of the use dilution of S40 Sterilant Concentrate occurs automatically within the sealed processing chamber. When the lid is closed and latched, water flows into the chamber, and the active ingredient is aspirated from the sterilant container in the sterilant compartment.

Control panel includes a display window, touch-sensitive keypads, and an impact printer to allow easy initiation, option setting and monitoring of cycles. The display and printer are factory-set to provide messages in the language from the available options (English, French, Spanish, Italian and Russian).

- **Display window** – the 2-line x 16-character, easy-to-read vacuum fluorescent display shows cycle information and option selections.
- **Touch pads** – by pressing the control panel touch pads, the operator can start or cancel a cycle, check the cycle phase while the unit is in-cycle, change or set option selections and advance the printer paper. Control touch pads are available in English language or International symbols, depending upon the destination country to which the unit is shipped.
- **Printer** – ink-on-paper, impact-type printer with a takeup motor records all cycle data on 2-1/4" (57 mm) wide, single-ply paper.

Printouts include key cycle data, including date, time the cycle was started, Load ID (manually entered by the operator or processor-printed), remarks section (for manually entering any comments), Operator ID number (manually entered or processor-printed), Processor serial number and cycle count. Sterile Cycles also include process temperature, exposure time, fill time and inlet temperature of water. Any cycle faults are listed and warn the operator of incomplete sterilization, should a fault occur. Diagnostic Cycles also include whether the Processor passed or failed (and if so, the reason for the failure). The printout also lists codes for options that can be programmed, including Operator ID, Patient ID, Device ID, Procedure ID and Physician ID. Any or all of these can be utilized.

Control system includes pre-programmed Sterile and Diagnostic Cycles designed for typical load and processing requirements.

Main power ON/OFF switch, in the back of the unit, can be used to shut off power to the unit.

Dual pre-filters in the Processor piping filter potable water. "A" filter is 2.5 micron; "B" filter is 0.2 micron. The pre-filter assembly includes a pressure regulator to reduce incoming water pressure to 36 psi (248 kPa).

Sterile water filter in the Processor housing is 0.2 micron.

Sterile air filter in the Processor housing is 0.2 micron. It filters incoming air during the Drain phase of the Sterile Cycle.

Electronic system monitors and maintains the parameters necessary to ensure sterile processing.

CYCLE DESCRIPTION

The Processor features two standard cycles: Sterile Cycle and Diagnostic Cycle.

Sterile Cycle is used for devices that have been properly cleaned, then visually inspected and tested for proper working condition, according to the manufacturer's recommendations. Immersible surgical/diagnostic devices are placed in the processing chamber. If applicable, the device is adapted to the appropriate Quick Connect. A chemical monitoring strip is secured in the tray and the chamber is then sealed. Sterile water enters the chamber and mixes with the sterilant to prepare the use dilution. The use dilution fills the chamber and is heated to 45.5°-60°C for sterilization. The use dilution is circulated around and through the devices, processing chamber and the Processor's fluid pathway for six minutes. The environmentally safe use dilution then drains from the chamber and the device and chamber are rinsed with sterile water two times. Upon successful completion of the Sterile Cycle (18 minutes* duration), devices are ready for immediate use.

* Actual cycle time may vary due to water pressure, incoming water temperature or filter status.

Diagnostic Cycle is run to ensure that the sterile water filter and all electro-mechanical systems of the Processor are functioning correctly. The cycle consists of a series of internal tests which are performed sequentially. A successful Diagnostic Cycle assures the operator that the processor operates as designed for sterile processing. Failure of a Diagnostic Cycle tells the operator that the processor must not be used until the problem is corrected and a successful Diagnostic Cycle is run. A Diagnostic Cycle takes approximately 19 minutes, and should be run once every 24 hours.

CONTROL VALUE SETTINGS

Cycle values (time, temperature) cannot be adjusted by the operator; however, certain control settings are operator-adjustable:

- **Language** – for displays and printouts. Default is language of the unit's destination country. Options are: English, Spanish, French, Italian and Russian.
- **Time set** – for setting/adjusting current time of day for displays and printouts.

FOR EXPORT ONLY – NOT FOR SALE OR USE IN USA

- **Date set** – for setting/adjusting current date for displays, printouts.
- **Access code** – for limiting access to certain options to authorized operators.
- **Operator ID** – for assigning a 5-digit numeric code to an operator's name, to appear on cycle printouts.
- **Patient ID** – for assigning 16-digit numeric codes to specific patients, to appear on cycle printouts.
- **Device ID** – for assigning 5-digit numeric codes linked to specific devices, to appear on printouts.
- **Procedure ID** – for assigning 2-digit numeric codes linked to specific procedures, to appear on printouts.
- **Physician ID** – for assigning 5-digit numeric code to operator-selected physician names, to appear on printouts.
- **Informative option** – to have a series of quality assurance cycle-related questions appear on the display, to be answered by the operator before a cycle can be initiated.
- **Automatic duplicate print** – to have a duplicate printout print at the end of each cycle.
- **End-of-cycle tone** – to have a tone sound at the end of each cycle.
- **Time format** – for setting the sequence for time displays and print-outs in AM/PM or 24-hour format.
- **Date format** – for setting the sequence for date displays and printouts (month/day/year, day/month/year, year/month/day).

PROCESSING TRAYS AND CONTAINERS

Specialized Trays and Containers are designed to enable the operator to fix devices in the appropriate position for sterile processing, ensure a continuous exchange of sterilant use dilution and sterile rinse on exposed surfaces of the devices (including internal structures and lumens) and protect certain types of devices during transportation to a sterile field following sterile processing.

Contact STERIS Customer Service for more information on device-specific trays and containers.

QUICK CONNECTS

The purpose of the STERIS Quick Connects is to ensure sterilant use dilution contact at all device sites.

Each Quick Connect includes the flow unit and instructions required to properly connect and flow devices in the Processor. Quick Connects are available for most flexible and rigid devices with internal channels and include device-specific processing instructions.

Contact STERIS Customer Service for a list of available device-specific Quick Connects.

ACCESSORIES

Accessories are available to enhance productivity or to meet specific Customer requirements, such as:

- **Workstation cart** (see Catalog M1013EN)
- **GFCI outlet** (hospital grade, ivory)
- **Temperature control valve**
- **Temperature booster** (240 V, 42 Amps; 208 V, 1-Phase, 48 Amps; or 208 V, 3-Phase, 48 Amps)
- **Thermometer assembly** (use with Temperature Control Valve)

CONSTRUCTION

The Processor frame is stainless steel, and the lid is aluminum casting with a see-through viewing window. Processor trays are ABS or PVC plastic.

MOUNTING ARRANGEMENT

SYSTEM 1 EXPRESS Processor can be installed in a variety of locations, with a minimum counter width of 40" (1016 mm), depth of 24" (610 mm) and minimum height of 38" (965 mm) measured from the top of the counter surface, to ensure proper overhead clearance.

If the Processor is installed on a hard-surface counter or permanently mounted shelf, the surface must be able to safely support 200 lb (91 kg). A 2" (51 mm) diameter hole is required to allow passage of the plug through the mounting surface.

Installation site selection must be within 5' (1524 mm) of electrical, water and drain inlet. Processor must be at least 12" (305 mm) away from open sink.

Also available is a workstation cart, designed to organize SYSTEM 1 EXPRESS Processor accessories and supplies for easy access and use (see Accessories).

PREVENTIVE MAINTENANCE

A global network of skilled service specialists can provide periodic inspections and adjustments to help ensure low-cost, peak performance. Contact your STERIS Representative for information on annual maintenance agreements.

ENGINEERING DATA

Shipping Weight: 179 lb (81 kg)

Operating Weight: 162 lb (74 kg)

Water Consumption: 9.3 U.S. gal (34.8 L) per cycle

Sterilant Consumption: 1 single-use cup per sterile process

Environmental Factors: 16-32°C (60-90°F) room temperature; 10-90% relative humidity, non-condensing.

FOR EXPORT ONLY – NOT FOR SALE OR USE IN USA

NOTES

1. Building service lines, provided by Customer, must supply the specified pressures and flow rates.
2. Backflow preventer (not provided by STERIS).
3. Customer must be sure mounting surface can safely support 200 lb (91 kg).
4. Space requirements:
 - Width: 40" (1016 mm) minimum
 - Depth: 24" (610 mm) minimum
 - Height: 38" (965 mm) minimum (includes overhead clearance)

CUSTOMER IS RESPONSIBLE FOR COMPLIANCE WITH APPLICABLE LOCAL AND NATIONAL CODES AND REGULATIONS.

UTILITY REQUIREMENTS

Water

Tap or other potable water \leq 140 ppm hardness as CaCO_3 , 3/4" I.D. male hose connection; 40-50 psig (276-345 kPa); 46-48°C (115-118°F). Supply line: 1/2" (12.7 mm), minimum – 3/4" (19 mm), optimum. Max. flow rate: 4 U.S. gal/min (15 L/min).

Drain

1-1/4" (32 mm) minimum, sink or other sanitary, non-backpressuring.

Electricity†

115 V ac, 60 Hz, 15 Amps; or
230 V ac, 50 Hz, 7 Amps.

† **115 V ac**, 20 A, 60 Hz, dedicated circuit; hospital grade GFCI receptacle per local codes. **230 V ac**, 10 A, 50 Hz, dedicated circuit; hospital grade receptacle per local codes.

FOR EXPORT ONLY – NOT FOR SALE OR USE IN USA

This document is intended for the exclusive use of STERIS Customers, including architects or designers. Reproduction in whole or in part by any party other than a Customer is prohibited.

- More Productive – cycle times as fast as 10 minutes
 - More Intuitive – effortless operation and reduced downtime
 - More Green – utility-saving technology and low cost of ownership
- The Vision 1321 and 1327 cart and utensil washer/disinfectors deliver maximum throughput and unparalleled performance because they are:

More Productive. More Intuitive.
More Green.

Vision® 1300 Series Cart and Utensil Washer/Disinfecter

M3533 FN

More Productive

Revolutionary Performance

The unique HexaClean spray pattern technology and the enhanced drying system provide more effective cleaning from start to finish:

- high-impingement HexaClean spray pattern provides continuous full-contact washing throughout the entire cycle
- 10-minute cycle times process more carts in less time (50% more productive than competition)*
- provides thermal disinfection
- enhanced drying system allows faster drying time

The Vision 1321 and 1327 cart and utensil washers are manufactured in compliance with the latest North American and global standards.

Case carts processed per 8 hour day*

Instrument Processing Option

The optional instrument cycle package provides an alternative for reprocessing instrument trays and loaner sets. This package includes:

- instrument rack with integrated spray arms (validated and compliant specifically with Vision 1300 series washers)
- enzymatic solution pump system

- integrated flow meters to ensure dosing accuracy
- instrument cycle pre-programmed into control
- intermediate level disinfection

*Based on published data of 15 minute cycle times.

HexaClean spray in action
Powerful cleaning, proven results

Integrated manifold recognizes that
instrument rack has been loaded.

Gallons of water used per fill

Automatic single-touch sliding glass door

USB port for downloading records

More Intuitive

- Easy-to-use Control Panel
- single-touch icon buttons for easy cycle selection
- cycle phase and time is visible across the room
- provides cycle parameter verification
- convenient record keeping capabilities
- USB port - download cycle records at the touch of a button
- integrated cycle printer on clean side

Smart Technology

- automatic sliding glass doors are easy to operate
- hydraulic seal maintains heat inside the chamber
- automatic floor tilt helps provide more efficient drying
- safety cable on the interior of the chamber
- streamlined, easy-access mechanical core allows for quick maintenance to help maximize uptime
- ProConnect Remote Monitoring technology watches every cycle to make sure your equipment operates consistently.

More Green

The Vision cart washer has been designed with water- and energy-efficient features to provide the lowest cost of ownership (up to 68% savings** compared to the competition).

The Vision 1300 Series:

- provides the lowest water consumption per fill of any washer on the market
- recycles 70% of water each cycle (excludes instrument cycle)
- Prolystica Cleaning Chemistries are formulated using biodegradable ingredients and use recyclable packaging
- 10 minute cycles allow for low utility consumption
- full glass door is made with 20% recycled glass

To see a video of the cart washer
in action, scan this QR code or visit
steris.com/visioncartwasher

- Value Beyond the Product**
ProConnect™ Remote Monitoring System
- 24/7 equipment monitoring
 - proactive equipment alerts and issue resolution
 - priority technical phone support

- Maximize Cleaning Performance**
Efficient cleaning starts with the right chemistries. The lightweight, ergonomic Prolystica Cleaning Chemistries:
- are specifically formulated to maximize the performance of Vision washers
 - use less chemistries than non-concentrated formulations
 - are available in 2x or 10x concentrations
 - have biodegradable ingredients

- Racks for Every Need**
Newly designed racks for the Vision 1300 series washers offer:
- maximum capacity to meet your workflow needs
 - easy to load racks that optimize cleaning efficacy
 - ergonomic, cool touch handles for safety and efficiency
 - convenient removable basket (on container rack) makes loading retention filters easy

Container Rack

Utensil Rack

Cool touch handle

APPLICATION

The Vision 1321/1327 Cart and Utensil Washer/Disinfector is a high-capacity mechanical washer intended for use in the efficient cleaning, low-level disinfecting and drying of case carts, containers, utensils, beds and other miscellaneous reusable items used in the care of patients. In addition, soiled simple hard-surfaced rigid surgical instruments (e.g., forceps and clamps) are cleaned and intermediate level disinfected with a required option.

DESCRIPTION

The Vision 1321/1327 Cart and Utensil Washer/Disinfector is a mechanical unit equipped with a microprocessor control system. The unit is designed with eight factory-set adjustable cycles: CART STANDARD, CART LOW ECO, CONTAINERS, UTENSILS, BEDS, QUICK, ALUM SAFE and INSTRUMENTS.

Eleven additional cycles are available for customized programming to meet specific operating requirements. Cycles are programmed with a drying phase, and with minimal wash and thermal rinse duration. Two exterior mounted fluorescent lights are included to illuminate the wash chamber.

The Vision 1321/1327 Cart and Utensil Washer/Disinfector is available in a double-door configuration. The unit can be built to seismic design.

Size (W x H x L)

1321 Version

- **Maximum overall dimensions:**
124 x 112.75 x 106" (3150 x 2864 x 2692 mm)
- **Effective chamber load capacity:**
40 x 80 x 82" (1016 x 2032 x 2083 mm)

1327 Version

- **Overall dimensions:**
124 x 112.75 x 130" (3150 x 2864 x 3302 mm)
- **Effective chamber load capacity:**
40 x 80 x 106" (1016 x 2032 x 2692 mm)

(Typical only - some details may vary.)

STANDARDS

This washer/disinfector meets applicable requirements of the following standards:

- **Governing Directive for the affixing of the CE Mark:**
Medical Devices Directive 2007/47/EC.
- As certified by UL:
 - » Underwriters Laboratories (UL) Standard UL 61010-1, 2005.
 - » Canadian Standards Association (CSA) CAN/CSA-C22.2, No. 61010-1, Second Edition.
- **International Standards:**
 - » **EN/IEC 61010-1, 2nd Edition;** EN/IEC 61010-2-040, 2005; EN/IEC 61326-1, 2005.
 - » **EN ISO 15883-1:2006,** ANSI/AAMI ST 15583-1 and CSA Z15883-1:2009 - Washer-Disinfectors - General Requirements, Definitions and Tests
 - » **EN ISO 15883-2:2006***, ANSI/AAMI ST 15583-2 (draft)* Requirements and Tests for Washer-Disinfectors Employing Thermal Disinfection for Surgical Instruments, Aesthesia Equipment, Hollowware, Utensils, Glassware, etc.

* When Instrument Washing Option is Present.

The Selections Checked Below Apply To This Equipment

VOLTAGE

- 208 V, 3-Phase, 60 Hz
- 380-415 V, 3-Phase, 50 Hz
- 480 V, 3-Phase, 60 Hz

CONFIGURATION

- 1321 Double Power Door (Pass-Through)
- 1327 Double Power Door (Pass-Through)

ACCESSORIES

- Common Service Area Junction Panels
- Nonservice Side Panels
- Service Side Access Panels
- Air Compressor (available only North America)
 - 208 V 230 V 460 V
- Floor Ramps for Floor Mounted Unit (two)
- HEPA Air Filter
- Seismic Tie-Down Kit
- Bar Code Scanner
- Vision Cart Washer/Disinfector Container Rack
- Vision Cart Washer/Disinfector Utensil Rack

OPTIONS

- Pure Water Line
- Third Reservoir
- Instrument Cycle

REMOTE MONITORING

- ProConnect® Response Center (Remote Monitoring, Priority Technical Support, Customer Care Center Access, Equipment Performance Reports)

Item _____

Location(s) _____

- » **EN ISO 15883-6:2011**, Requirements and Tests for General Purpose Washer-Disinfectors Employing Thermal Disinfection for Non-Invasive Medical Devices, Washbowls, Utensils, Transit Containers, etc.

FEATURES

Sumless Solution Delivery System. The washer/disinfecter cabinet base is 6-3/4" (171 mm) deep.

Solutions are heated by an in-line stainless-steel heat exchanger. A thermal rinse tank includes a steam coil to maintain water temperature for thermal rinse phase.

Spraying System. The washer/disinfecter includes two horizontally mounted spray headers, one on each side of the wash chamber to optimize load coverage and cycle time. Each spray header contains 17 jets directed to provide maximum full load coverage. Header height is adjusted to concentrate spray action to lower portion of chamber when processing carts 44" (1118 mm) high or lower. Control monitors spray system travel to stop movement if obstruction is detected or alert operator if full movement is not accomplished.

Horizontal Sliding Doors. Each chamber is provided with two automatic, powered, side-sliding doors made of two 1/4" (6 mm) tempered glass panes to minimize heat transfer and allow easy visual monitoring of the cleaning process. Units are equipped with sensors to detect obstructions and prevent unit operation if doors are not fully closed. Doors are dynamically pressed against a silicone gasket ensuring complete air and water seal of the wash chamber.

Interior Light. Two exterior mounted 18W fluorescent lamps are provided to illuminate the wash chamber. The life expectancy of the lamps is 10,000 hours.

Integral Self-Priming Automatic Chemical Dispenser.

Three peristaltic pumps are included in the standard washer/disinfecter with up to two additional chemical injection pumps provided if Instrument Washing option and Three Reservoir option are installed. Standard pumps: one for neutral or alkaline detergent, one for rinse aid and one for the descaler agent. The pumps are located in a separate room, positioned near the detergent containers and connected to washer/disinfecter with up to 100' (30 m) of piping. Each tube is color coded to facilitate tracking through the facility.

Pumps allow the use of the Prolystica® Ultra Concentrate chemicals. Each ultra concentrated product is 10 times the concentration of a traditional product, therefore Only 1/10th of the chemical is injected to properly process the cycles.

The peristaltic pumps automatically add a selected quantity of detergent:

- Ultra Concentrates: 1/20 or 1/10 oz/gal (0.4 to 0.8 mL/L).
- Regular Chemicals: 1/8 to 2 oz/gal (1 to 16 mL/L)
- Rinse Aid: 1/50 oz/gal (0.16 mL/L).

A low-level sensor is included to indicate when the detergent level in the container is low or when insufficient chemical is available for the next cycle.

The control monitors the volume of chemicals injected and indicates if this parameter meets specified criteria during all specific phases (only for instrument cycle).

Wash Chamber. The chamber is constructed of 14 and 16 gauge, #304 stainless steel (No. 4 finish), argon-welded and polished. Base is made of #304 L stainless steel. Chamber flooring consists of two removable stainless-steel panels designed with gratings running lengthwise in the chamber allowing for quiet loading and unloading.

A removable debris screen is located in the bottom of the chamber. The debris screen prevents large debris from entering the piping system and pump. The screen is provided with a handle and is easily removed for cleaning under running water.

Other Components. All components of the wash/rinse system, including screens, spray headers, piping, and booster in-line heat exchanger are constructed of #304 stainless steel. High-pressure recirculating pump is made of #316 L stainless steel. Ball valves are constructed of Teflon® and #316L stainless steel.¹

Unit frame, mobile mechanical core and all fasteners are constructed of #304 stainless steel. Aluminum-sheathed rigid fiberglass insulation, 1" (25 mm) thick covering the top and sides of the chamber exterior, reduces heat loss and noise level to the work area.

Treatment Staging Tanks. The tanks are equipped with an automatic solution level control, automatic hot water fill and safety overflowing piping. Tanks are made of #304 L stainless steel and are fully insulated with 1" (25 mm) thick aluminum sheathed fiberglass to prevent heat loss and burn hazard. The bottom of the tanks are sloped toward the water outlet for optimum drainability. Each solution tank includes an internal baffle that deflects solutions to the tank walls to assure self-cleaning of the tank during the recirculation process. Capacity is 25 U.S. gal (94.62 L).

High Pressure Pump. Open impeller pump is powered by dual-speed motor permitting two ranges of flow rate/pressure. Pump impeller, shaft and casing are of #316 L stainless-steel construction. The pump motor is a TEFC (totally enclosed fan cooled) class H motor, electro-polished, magnetic starter, overload protection and sealed bearings (requiring no lubrication).

Nonrecirculated, Vented Drying System. The vented drying system effectively dries the processed load at the completion of each cycle. Fresh, heated filtered air is blown at high velocity through all four corners of the wash chamber and to the load. Dry air is then evacuated through the chamber vent opening. Fresh air can be HEPA (High Efficiency Particulate Air) filtered as an accessory.

Automatic Floor Tilting System. System slopes the processed load at the start of the drying phase to properly drain flat surfaces of carts. The floor is automatically returned to its level position at completion of the cycle for smooth loading and unloading.

Integral Exhaust Fan. The fan assists the building ventilation system when evacuating vapor from the wash chamber. Fan impeller, casing and motor shaft are made of stainless steel.

¹ Teflon® is a registered trademark of E.E. Dupont de Nemours and Company.

Heating System. Solutions are heated by an instantaneous, in-line, stainless-steel heat exchanger designed to reduce steam consumption and cycle time. A steam coil also exists in the thermal rinse tank to preheat and maintain water temperature to reduce thermal rinse phase readiness time.

Drain Discharge Cool Down. Unit is provided with a cold water connection for use with cold water selection and effluents cool down if sump or reservoir water temperature is higher than 140°F (60°C) while being discharged to building drain system.

Process Data Validation System. The washer/disinfector includes a Process Data Validation System (PDVS). This system documents and measures the following parameters:

- Sump temperature
- Volume of detergent injected during Instrument Cycle

Control alarms user if this independently recorded data falls outside passing criteria. The PDVS increases facility confidence level that the cycle has been successfully completed.

ProConnect Response Center. Minimize response time and minimize unscheduled downtime on your equipment. Secure, internet-based, 24/7 remote monitoring enables both Predictive Maintenance as well as instant alert to STERIS when there is an equipment alarm. Also included are priority technical support, online parts ordering, equipment performance dashboards, and scheduling service at eservice.steris.com.

CONTROL SYSTEM

The control system consists of an Allen-Bradley SoftLogix™ PC-based control system¹. Operator interfaces are ergonomically located, easily accessible and viewable on both ends of the unit. Other control system features are as follows:

- **Control system** monitors and controls washer operations and functions. Cycle progresses automatically through the designated phases as programmed. Control system also stores all cycle data as protection against power disruption.
- **Operator Interface** is an 8 x 7" (203 x 179 mm) touch-sensitive color graphic display. Display permits operator to monitor current cycle status, including current chamber temperature and remaining phase time. Identical information displayed on both ends of the unit.
- **Integral thermal printer** with automatic paper take-up provides an easy-to-read record of all pertinent cycle data. Generated printout includes date, treatment type, cycle starting time and key cycle transition points. All cycle deviations are indicated by visual and audible means, recorded by the printer and need acknowledgement by operator.
- **Security access code** requires entry of a four-digit access code to change cycles, cycle values and to enter service mode.
- **Service mode** is accessible through main control panel for service and maintenance purposes.
- **Preprogrammed parameters** for each cycle. If operator selects an out-of-range setting when modifying the cycle values, the control system alerts operator with a reference message and halts further operation until the correct value is entered.
- **USB Port** is supplied so cycle data is available in PDF format and accessible through Service Mode.

¹ SoftLogix™ is a trademark of Allen-Bradley, a Rockwell Automation Company.

- **Ethernet port** is available for remote monitoring and troubleshooting.
- **Three Operator Modes** are available. Supervisor, Service and Cycle. The first two modes are password protected. Cycle mode is always available.

CYCLE DESCRIPTION

ADVISORY NOTE: *This washer/disinfector is specifically designed to only process goods as outlined in this tech data. If there is any doubt about the use of a specific material or product, contact the manufacturer of the product for recommended washing techniques.*

STERIS does not intend, recommend, or represent in any way that this Vision 1321/1327 Cart and Utensil Washer/Disinfector be used for the terminal disinfection or sterilization of any regulated medical device. The Vision 1321/1327 Cart and Utensil Washer/Disinfectors are intended only to perform an initial step in the processing of soiled, reusable items used in the care of patients. If medical devices will be contacting blood or compromised tissues, such devices must be terminally processed in accordance with good hospital practices (GHP) before each use in human patients.

Items to be cleaned are placed on the appropriate accessory cart and/or rack and are positioned in front of the washer. When the washer is ready, the operator opens the doors and pushes the cart/rack into the chamber. Operator closes the door and initiates the cycle. Unit proceeds through treatment schedule and automatically opens the unloading door at cycle completion. A display message and audible alarm indicate that the load is ready for removal. Clean side operator removes clean/disinfected items.

Each cycle program is operator adjustable to meet specific processing needs. Cycle programming is protected by a security access code set by the supervisor. The standard control system features eight factory pre-programmed cycles (CART STANDARD, CART LOW ECO, CONTAINERS, UTENSILS, BEDS, QUICK, INSTRUMENTS and ALUM SAFE) and a special SELF DECONTAMINATION cycle for routine maintenance of the unit. Control is also equipped with open cycles that are programmable on-site at the user's discretion.

Each cycle program is constructed of phases. The following phase descriptions are from the featured Cart and Utensil cycles developed and validated to provide a total cleaning solution by joining advanced washing technology with Prolystica Ultra Concentrate cleaning chemistries:

Wash phase - solution from Reservoir (Tank) 2 or 3 (if the third reservoir option is present) is recirculated through the spray system for the selected time period. Solution is heated to 135°F (57°C) in the second portion of the phase. After a programmable number of cycles, solutions are automatically drained and renewed.

Thermal Rinse phase - pre-heated, hot or pure water from Reservoir (Tank) 1 is sprayed over the load and recirculated for the selected time period to rinse and disinfect the load. Solution is heated to 176°F (80°C). After a programmable number of cycles, solutions are automatically drained and renewed. Rinse Aid is automatically added during the reservoir (tank) filling.

HEPA-Filtered Air Drying - The drying phase consists of blowing heated nonrecirculated air on the load, and evacuating it through the vent connection. Selected time for this nonrecirculated phase must be between 02:00 and 15:00.

SAFETY FEATURES

Safety Door Switch. A microswitch prevents a cycle from starting if the doors are not fully closed, and also stops the unit if doors are opened during a cycle. Doors must be closed to continue operation. Also, if an obstruction is present when a door attempts to close, control senses obstruction and prevents door from closing.

Emergency Stop Pushbuttons. The washer/disinfector is equipped with two external Emergency Stop pushbuttons that automatically stop operation of the unit. Once pushed, door locking mechanism disengages allowing the door to be easily opened from inside or outside.

Door Interlock. The safety interlock mechanism prevents both doors from being opened simultaneously, preventing cross-contamination. The clean side/unload door cannot be opened until the cycle has been successfully completed.

Labeling. The washer/disinfector is labeled with warning and caution pictograms to warn the operators and service technicians of precautions to be taken.

Emergency Stop Cables. Located on each side of the interior wash chamber, instantly stop washer/disinfector operation if pulled. Once pulled, door locking mechanism disengages allowing the door to be easily opened from inside or outside.

ON/OFF Switch. Power switch is located on load side of the unit and is used to shut off control power and drain sump and reservoirs (tanks).

OPTIONAL FEATURES

Instrument Cycle Package allows the cleaning and intermediate level disinfection of soiled hard-surfaced rigid surgical instruments (e.g., forceps and clamps). Option comes with an Enzyme injection line, a coupling system for manifolded rack, a Vision instrument washing manifolded rack, detergent flow meters and an Instrument Cycle.

Third Reservoir Option allows an additional detergent to be introduced to wash cycle. Tank is constructed of #304 L stainless-steel, insulated with aluminum sheathed rigid fiberglass to prevent heat loss and burn hazard and with a capacity of 25 US gal (95 L).

Pure Water Line, constructed of 316 stainless-steel, delivers purified water to rinse phase.

ACCESSORIES

High Efficiency Particulate Air (HEPA) filter is located on the mechanical core of washer/disinfector. Air entering the chamber passes through the HEPA filter to prevent any contamination of the load.

Service Side Enclosure Panels and supports are provided to enclose the mechanical core.

Nonservice Side Enclosure Panels are provided to cover insulation on the nonservice side of unit cabinet.

Remote Air Compressor, complete with tank and pressure switch, is available in either 208 V or 460 V. Oilless air compressor operates at 59 dBa. Wiring at installation not provided by STERIS.

Floor Ramps, 4' (1.2 m) long, are provided with guards on each side to help the operator guide the load into the washer. Slope of the ramp not to exceed 6.5° to enable easy loading of carts in the wash chamber.

Seismic Tie-Down Kit includes hardware for properly securing the washer to the building floor. The washer is designed to comply with Seismic Zone 3 and 4 requirements.

Bar Code Scanner is provided to automatically identify and initiate the appropriate cycle by means of a bar code tag attached to load.

PREVENTIVE MAINTENANCE

A global network of skilled service specialists can provide periodic inspections and adjustments to help ensure low-cost peak performance. STERIS representatives can provide information regarding annual maintenance programs.

CHEMICAL ADDITIVES SPECIFICATIONS

Follow detergent label recommendations for the concentration of chemical to use.

To achieve maximum cleaning efficiency, STERIS recommends the following chemicals:

- Prolystica® Ultra Concentrate Enzymatic Presoak and Cleaner (Instrument Cycle).
- Prolystica® Ultra Concentrate Alkaline Detergent.
- Prolystica® Ultra Concentrate Neutral Detergent.

IMPORTANT: STERIS does not promote, recommend, or endorse the use of any other type of chemical additives in the processing of articles in the Vision 1321/1327 Cart and Utensil Washer/Disinfector, such as high alkaline detergents (pH > 12), alcohol rinses, and liquid disinfectants, including hypochloric acid (bleach).

NOTES

1. Customers must ensure the washer/disinfector stands on a level non combustible floor.
2. STERIS recommends that shutoff valves and vacuum breakers (not provided by STERIS) be installed on service lines, and that fused disconnect switches (with lockout in OFF position; not provided by STERIS) be installed in electric supply lines near the equipment.
3. Pipe sizes shown indicate terminal outlets only. Building service lines provided (not provided by STERIS), must supply the specified pressures and flow rates.
4. For all ventilation ducting from the washer, STERIS recommends installation of a dedicated corrosion-proof, water-tight duct, rated to an operating temperature of 210°F (99°C) or more, to the exterior of the building, sloped toward the washer with condensate drain connection.
5. Refer to Equipment Drawing for specific installation details.
6. STERIS recommends a well-lighted service area (if applicable), along with the provision of a convenience outlet for maintenance.
7. Always follow local electrical codes and safety-related work practices for wiring.

UTILITY REQUIREMENTS

Important: Refer to Equipment Drawing (Vision 1321: 920-517-287; Vision 1327: 920-513-916) for installation details and specifications.

Hot Water

1" NPT

Cold Water

1" NPT

Steam

1-1/2" NPT

Air

1/2" NPT

Ventilation

6" (152 mm) O.D.

Drain

Recommended minimum 9" (229 mm) floor sink with minimum 4" (101 mm) drain outlet.

Pure Water

1" NPT

Condensate Return

1" NPT

Electricity

- » 200-208 V, 60 Hz, 3-Phase, 25.5-27.5 Amps
- » 460-480 V, 60 Hz, 3-Phase, 13.5 Amps
- » 380-415 V, 50 Hz, 3-Phase, 14.5 Amps

Telecommunications Requirements for ProConnect Response Center

- An active wired or wireless TCP/IP network, 10/100BaseT Ethernet connection at each piece of connected equipment, Internet access and an IP address on the facility network.
- 5 GB of available hard drive space to run the service agent. Can be installed on:
 - »Dedicated PC running Windows XP with 2.8GHz processor, 512MB of RAM
 - »Virtual Machine
 - »Server
- Local STERIS login at the PC with a username of STERIS and the password should be ProConnect (STERIS Customer Number).

Ethernet cable to connect each piece of STERIS equipment and the dedicated PC to the facility network.

The base language of this document is ENGLISH. Any translations must be made from the base language document.

CUSTOMER IS RESPONSIBLE FOR COMPLIANCE WITH APPLICABLE LOCAL AND NATIONAL CODES AND REGULATIONS.

ENGINEERING DATA	
Shipping Weight (max): Chamber	1920 lbs (871 kg)
Mechanical Core	1400 lbs (635 kg)
Operating Weight: Cabinet, Water, Two Heavy Case Carts	7483 lbs (3394 kg)
Without Cabinet, With Water and Two Heavy Case Carts	6367 lbs (2888 kg)
Hot Water Consumption per cycle:	14 U.S. gal (53 L)
Steam Consumption per cycle (with hot tap water heated at 140°F-60°C):	31 lbs (14 kg)
Noise Level¹:	65 dBa
Heat Loss:	13,800 BTU/hr (4039 W)

¹ Calculated as described in ISO-3746 standard

NOTES

Recommended Air Compressor

1. Rotary scroll air compressor must be located in a clean, well lit, and ventilated area.
2. Never install the compressor where the ambient temperature is higher than 105°F (40°C), or where humidity is high. Clearance must allow for safe, effective inspection and maintenance. Minimum clearances required: above, 24" (610 mm); drive belt side, 12" (300 mm); and, other sides 20" (510 mm).

3. Never use any piping smaller than the compressor connection.

UTILITY REQUIREMENTS

Recommended Air Compressor

Electrical – Compressor Motor

208 or 460 Volt, 60 Hz, 3-Phase

ENGINEERING DATA - RECOMMENDED AIR COMPRESSOR WITH AUTOMATIC TANK DRAIN

CFM Open Flow	Weight	Comp. Stages	TANK				MOTOR
			Lubrication	Size	Capacity	Max. Press	Operating Speed
7.7	240 lbs (109 kg)	1	Oilless	See Below	30 gal (114 L)	100 psig (689 kPa)	60 Hz (1725 rpm)

WALL AND TYPICAL INSTALLATION

POSITION OF REFERENCE POINT DETAILS

GENERAL NOTES:

1. ALLOW SUFFICIENT SPACE TO LOAD AND UNLOAD CARTS AND UTENSILS (PLUS LENGTH OF RAMP(S), IF APPLICABLE).
2. AIR LINE, ELECTRICAL CONDUIT, DUCT WORK, STEAM PIPING, CONDENSATE RETURN PIPING AND WATER PIPING SHOULD BE ROUTED ABOVE WASH CHAMBER AS INDICATED TO AVOID INTERFERING WITH SERVICE OF COMPONENTS ON WASHER ROOF.

NOTE (A) : WALLS COULD BE BUILDING WALL OR OPTIONAL SERVICE OR NON-SERVICE S/S PANELS.
 NOTE (B) : DECK / IF PRESENT
 NOTE (C) : FOR STANDARD THROUGH-WALL UNIT, CLEARANCE BETWEEN CLOSED DOOR OF ELECTRIC CABINET AND FACILITY WALL, OR ANY FIXTURE, OPPOSITE MUST BE AT LEAST 36" [914].

UTILITY (PLUMBING) CONNECTION POSITION FOR PIT-MOUNTED UNIT

- GENERAL NOTES:
- EXTERNAL ISOLATION VALVES, UNIONS, VACUUM BREAKERS ON UTILITY LINES TO WASHER NOT PROVIDED BY STERIS.
 - PIPE SIZES SHOWN INDICATE TERMINAL OUTLET ONLY FOR THE EQUIPMENT.
 - ALL CONNECTIONS SHOULD BE IN ACCORDANCE WITH LOCAL CODES.
 - SEE PAGE 1 FOR POSITION OF REFERENCE POINT DETAILS.
 - MINIMUM INLET STEAM PRESSURE TAKES INTO ACCOUNT NATURAL PRESSURE LOSSES IN WASHER STEAM PLUMBING, AS WELL AS A CONDENSATE RETURN MAXIMUM RISE OF 17' [5.2 M], MEASURED FROM BASE OF WASHER OR AN EQUIVALENT PRESSURE LOSS. ANY ADDITIONAL PRESSURE LOSS WILL HAVE TO BE COMPENSATED EITHER BY INCREASING THE INLET STEAM PRESSURE, BEING CAREFUL NOT TO EXCEED ALLOCATED MAXIMUM, OR BY ENSURING THAT THE STEAM SUPPLY OF THE CUSTOMER TAKES CHARGE OF THE CONDENSATE RETURN AT THE LOCATION INDICATED.
 - INSTALLATION OF A WATER HAMMER ARRESTOR (NOT BY STERIS) IS RECOMMENDED.
 - A LOW PRESSURE CONDENSATE RETURN SYSTEM IS REQUIRED AND NOT TO EXCEED 10 PSIG.
 - ALL OVER PRESSURE DEVICES TO CONTROL PRESSURE OF AIR, STEAM AND WATER ARE NOT INCLUDED. IT IS RESPONSIBILITY OF CUSTOMER TO INSTALL THOSE EQUIPMENT ON MAIN UTILITIES.**
 - CUSTOMER MUST PROVIDE UTILITY CONNECTIONS WITH SHUTOFFS DISCONNECTS WITHIN 2 FEET OF THE PERIMETER OF THE EQUIPMENT AND BELOW THE CEILING DECK. STERIS (SELLER) INCLUDES FINAL HOOKUP OF THESE NECESSARY UTILITIES WHEN THE STERIS INSTALLATION PACKAGE IS PURCHASED.

NOTE (A) : DO NOT PLACE PIPING IN SERVICE ACCESS AREA, SEE PAGE 1 FOR TYPICAL INSTALLATION.
 NOTE (B) : SIGNAL AVAILBLE FOR PURE WATER REQUEST INSIDE ELECTRICAL BOX. -SEE UTILITY ELECTRICAL PAGE -INSTALL BY ELECTRICIAN ONLY

GENERAL INFORMATIONS

ENGINEERING CHANGE	REV NO	ROUGH DATE
FIRST RELEASE	0	2011-05-02

GENERAL NOTES:

- SIZE OF THE HEAVIEST UNCRATED PIECE : [MECHANICAL CORE] 21" W X 68" H X 44" L [533 X 1727 X 1117].
- WEIGHT OF THE HEAVIEST UNCRATED PIECE : 1000 LBS [453kg]
- SHIPPING DIMENSION :
 - CRATE A : 49" W X 95" H X 121" L [1245 X 2413 X 3073]
 - CRATE B : 49" W X 95" H X 121" L [1245 X 2413 X 3073]
 - CRATE C : 49" W X 95" H X 121" L [1245 X 2413 X 3073]
 - CRATE D : 38" W X 68" H X 112" L [965 X 1727 X 2845]
 - CRATE E : 36" W X 89 1/2" H X 70" L [914 X 2273 X 1778]
 - CRATE F : 36" W X 93 1/2" H X 51" L [914 X 2374 X 1295]
 - CRATE G : 49" W X 95" H X 121" L [1245 X 2413 X 3073]
- OPERATING WEIGHT Lb[kg]: - WITH CABINET, WATER AND TWO HEAVY CASE CARTS 7483 LBS [3400 kg]
- WITHOUT CABINET, WITH WATER AND TWO HEAVY CASE CARTS 6367 LBS [2893 kg]
- OPENING AREA FROM SERVICE AREA TO CLEAN SIDE : LESS THAN 30 po² [19354]mm².

- NOTE (A) : COMPRESSED AIR SPECIFICATIONS : AS PER ISO-8573-1 CLASS 5.
- MAX. PARTICLE SIZE : 40 MICRONS
 - MAX. PARTICLE DENSITY : 10 MG/M³
 - MAX. DEW POINT FOR WATER CONTENT : 45°F (7°C)
 - MAX. OIL CONCENTRATION FOR THE OIL CONTENT : 25 MG/M³
 - A REFRIGERATED AIR DRYER IS RECOMMENDED WHERE ENVIRONMENTAL DEW POINT CONDITIONS ARE HIGHER THAN RECOMMENDED (CONTACT STERIS SALES REPRESENTATIVE).
- NOTE (B) : STEAM QUALITY: CLEAN AND DRY RECOMMENDED.
- NOTE (C) : IF DRAIN COOLING SYSTEM IS CHOSEN, MAX. FLOW RATE TO DRAIN IS 121 US GPM [458 L/MIN].
- NOTE (D) : OPTIMAL WASHER PERFORMANCES OBTAINED WHEN UTILITIES ARE PROVIDED AT MAX VALUE OF RANGE.
- NOTE (E) : OPTIMAL CLEANING EFFICIENCY WHEN HOT WATER IS AT A MAXIMUM OF 135° F [57.2°C].
- NOTE (F) : **ALL OVER PRESSURE DEVICES TO CONTROL PRESSURE OF AIR, STEAM AND WATER ARE NOT INCLUDED. IT IS RESPONSABILITY OF CUSTOMER TO INSTALL THOSE EQUIPMENT ON MAIN UTILITIES.**
- NOTE (G) : STERIS DOES NOT RECOMMEND INSTALLATION OF SPRINKLER OVER THE UNIT BUT IF REQUIRED BY LOCAL CODE IT MUST BE FUSE TO 260°F (126°C) OR ABOVE. ANY SPRINKLER HEADS IN FRONT OF THE LOAD/UNLOAD DOORS MUST ALSO BE FUSE TO 260°F (126°C) OR ABOVE.
- NOTE (H) : THIS CONSUMPTION REPLACES HOT WATER CONSUMPTION FOR THERMAL PHASE AND RINSE (IF PURE WATER OPTION).
- NOTE (I) : IF CYCLE SET POINT TEMPERATURE IS HIGHER THAN 140°F [60°C], THESE CONSUMPTIONS ARE EQUAL TO THERMAL PHASE CONSUMPTIONS.
- NOTE (J) : IF DRAIN COOLING SYSTEM IS ENABLED, MAX FLOW RATE IS 110-120 US GPM [416-454 L/MIN].
- NOTE (K) : RECOMMENDED MINIMUM 9" [228]mm FLOOR SINK WITH MINIMUM 4" [101]mm DRAIN OUTLET.

UTILITY (VENTILATION) FOR PIT-MOUNTED UNIT

UTILITY REQUIREMENTS CHART					
DESCRIPTION	CONNECTION TYPE	CONNECTION		OPERATING CONSUMPTION (A) (D)	NOMINAL TEMP.
		MIN. SIZE			
086 VENTILATION (B)	O.D.	6	[1.52]	1000 SCFM, VAPOR EXHAUST AND DRYING [28.31 M ³ /MIN] 250 SCFM, WASH AND RINSE [7.07 M ³ /MIN]	212°F MAX. [100°C]

- NOTE (A): - INSTALLATION OF EXTERNAL DUCTING FROM WASHER EXHAUST FAN TO THE EXTERIOR OF THE BUILDING (NOT BY STERIS) MUST NOT EXCEED 1" H₂O IN PRESSURE LOSS TO ENSURE OPTIMAL DRYING PERFORMANCE OF THE WASHER AND FAN MOTOR EFFICIENCY. IF PRESSURE LOSS OF EXTERNAL DUCTING EXCEEDS 1" H₂O, AN EXTERNAL FAN MUST BE INSTALLED TO COMPENSATE (NOT BY STERIS). THIS PRESSURE DROP MUST BE VALIDATED DURING INSTALLATION. SERVICE TECHNICIAN MUST FOLLOW THE INSTALLATION MANUAL PROCEDURE TO MEASURE THIS DATA:
- BUILDING DUCT MUST BE SCALED UP TO 10" [254 MM] O.D. MINIMUM AS CLOSE AS POSSIBLE TO WASHER DUCT CONNECTION (ADAPTOR FROM 6" TO BUILDING DUCT O.D. NOT PROVIDED BY STERIS).
 - FACILITY ROOM VENTILATION MUST COMPENSATE FOR WASHER EXHAUST FLOW RATE.
 - FOR ALL VENTILATION DUCTING FROM WASHER, STERIS RECOMMENDS INSTALLATION OF A DEDICATED CORROSION-PROOF AND WATERTIGHT DUCT RATED TO AN OPERATING TEMPERATURE OF 210°F (99°C) OR MORE TO THE EXTERIOR OF THE BUILDING, SLOPED TOWARD THE WASHER AND FREE OF DEAD LEGS.
- NOTE (B): EXHAUST FAN NORMALLY OPEN-AUXILIARY CONTACTS ARE AVAILABLE FOR LOW FLOW AND HIGH FLOW TO SUPPLY A SIGNAL TO THE FACILITY HVAC CONTROL SYSTEM WHENEVER THE CART WASHER VENTILATION EXHAUST FAN IS IN OPERATION.
DO NOT PLACE DUCT WORK TO INTERFERE WITH SERVICE ACCESS AREA SEE PAGE 1 FOR TYPICAL INSTALLATION.
- NOTE (C): SIGNAL AVAILABLE FOR EXTERNAL VENTILATION CONTROL INSIDE ELECTRICAL BOX.
-SEE UTILITY ELECTRICAL PAGE
-INSTALL BY ELECTRICIAN ONLY
- NOTE (D): INTERNAL DRYING AND EXHAUST FANS PRODUCE 950 SCFM AND BUILDING EXHAUST NEEDS TO EXHAUST AT THE RATE OF 1000 SCFM.

UTILITY REQUIREMENTS CHART					
DESCRIPTION	CONNECTION TYPE	CONNECTION		OPERATING CONSUMPTION (A) (D)	NOMINAL TEMP.
		O.D.	MIN. SIZE		
086 VENTILATION (B)	O.D.	6	[152]	1000 SCFM, VAPOUR EXHAUST AND DRYING [28.31 M ³ /MIN] 250 SCFM, WASH AND RINSE [7.07 M ³ /MIN]	212°F MAX. [100°C]

- NOTE (A):** - INSTALLATION OF EXTERNAL DUCTING FROM WASHER EXHAUST FAN TO THE EXTERIOR OF THE BUILDING (NOT BY STERIS) MUST NOT EXCEED 1" H₂O IN PRESSURE LOSS TO ENSURE OPTIMAL DRYING PERFORMANCE OF THE WASHER AND FAN MOTOR EFFICIENCY. IF PRESSURE LOSS OF EXTERNAL DUCTING EXCEEDS 1" H₂O, AN EXTERNAL FAN MUST BE INSTALLED TO COMPENSATE (NOT BY STERIS). THIS PRESSURE DROP MUST BE VALIDATED DURING INSTALLATION. SERVICE TECHNICIAN MUST FOLLOW THE INSTALLATION MANUAL PROCEDURE TO MEASURE THIS DATA:
- BUILDING DUCT MUST BE SCALED UP TO 10" [254 MM] O.D. MINIMUM AS CLOSE AS POSSIBLE TO WASHER DUCT CONNECTION (ADAPTOR FROM 6" TO BUILDING DUCT O.D. NOT PROVIDED BY STERIS).
 - FACILITY ROOM VENTILATION MUST COMPENSATE FOR WASHER EXHAUST FLOW RATE.
 - FOR ALL VENTILATION DUCTING FROM WASHER, STERIS RECOMMENDS INSTALLATION OF A DEDICATED CORROSION-PROOF AND WATERTIGHT DUCT RATED TO AN OPERATING TEMPERATURE OF 210°F [99°C] OR MORE TO THE EXTERIOR OF THE BUILDING, SLOPED TOWARD THE WASHER AND FREE OF DEAD LEGS.
- NOTE (B):** EXHAUST FAN NORMALLY OPEN-AUXILIARY CONTACTS ARE AVAILABLE FOR LOW FLOW AND HIGH FLOW TO SUPPLY A SIGNAL TO THE FACILITY HVAC CONTROL SYSTEM WHENEVER THE CART WASHER VENTILATION EXHAUST FAN IS IN OPERATION. DO NOT PLACE DUCT WORK TO INTERFERE WITH SERVICE ACCESS AREA SEE PAGE 1 FOR TYPICAL INSTALLATION.
- NOTE (C):** SIGNAL AVAILABLE FOR EXTERNAL VENTILATION CONTROL INSIDE ELECTRICAL BOX.
- SEE UTILITY ELECTRICAL PAGE
 - INSTALL BY ELECTRICIAN ONLY
- NOTE (D):** INTERNAL DRYING AND EXHAUST FANS PRODUCE 950 SCFM AND BUILDING EXHAUST NEEDS TO EXHAUST AT THE RATE OF 1000 SCFM.

GENERAL NOTES:

1. ALL CONNECTIONS SHOULD BE IN ACCORDANCE WITH LOCAL CODES.
2. SEE PAGE 1 FOR POSITION OF REFERENCE POINT DETAILS.

STERIKING®

Rotosealer RS-120

Economical choice for small clinics

- ▶ Simple operation
- ▶ All-day ready for use
- ▶ Increased sealing speed
- ▶ Constant sealing pressure
- ▶ Digital temperature control
- ▶ Sealing technique according to DIN 58953, PART 7
- ▶ Safety tested and approved by EN, VDE
- ▶ Built-in cooling control
- ▶ Practical worktop available as optional extra
- ▶ Shock watch system for delivery safety

WIPAK MEDICAL

Rotosealer RS-120

continually ready for use for quick and reliable closing of all heat-sealable materials.

Safe and quick sealing process

- Sealing temperature is easily adjustable to suit the material being sealed.
- When switched on, the motor and conveyor belts start automatically.
- The package is conveniently carried by the conveyor belts through the heating and sealing rollers to achieve quick and efficient closure.
- Adjustable in-feed guiding plate provides predefinition of the seal distance (0 - 35mm) from the package edge.
- Built-in fan improves the inside temperature control and minimizes overheating risk in all-day use.

The white epoxy coated housing is easy to maintain and to keep clean.

The package is hermetically sealed to protect against bacteria.

The Steriking® Rotosealers provide a strong seal. Total seal width is 12 mm.

Technical data

Seal width	12 mm
Sealing speed	10 m/min
Sealing temperature	0 - 220 °C
Temp. tolerance	±2 %
Power consumption	250 W (max 600 W)
Power supply	220/240 V 50/60Hz
Weight	15 kg
Dimensions	490 x 255 x 160 mm
Separate worktop	625 x 225 x 60 mm

Warranty

- 24 months from the date of purchase.

Shock watch label

- Enables recognition of transport damage.
- Adhered to the transport carton.

Detailed operating manual and list of spare parts come with each unit.

OVER 15 YEARS OF PROVEN PERFORMANCE. The STERRAD[®] 100S System can single-handedly sterilize heat- and moisture-sensitive devices in 55 minutes. 51 trays can be sterilized with the STERRAD[®] 100S System in the time it takes to complete 34 trays with VHP or 6 trays with EtO.* Our proven, low temperature hydrogen peroxide gas plasma technology efficiently eliminates the potential hazard of toxic residue, ensuring a safe working environment.

FEATURES AND BENEFITS

Safety for Users, Patients, Instruments, and the Environment

- Proprietary cassette delivery system ensures safe operation for users.
- Microprocessor controls monitor sterilization parameters and alert system operators if not met, ensuring patient safety.
- The dry, low temperature gas plasma process is gentle on delicate instruments, electronics, and optics, potentially reducing instrument downtime and repair costs.

Increased Productivity

- Greater number of trays may be processed versus alternative methods over the same time period.
- The STERRAD[®] 100S System increases instrument utilization, potentially reducing costly instrument damage and expensive inventory.
- CYCLESURE[®] 24 Biological Indicator provides sterility assurance in 24 hours.
- Sterilizes a wide range of instruments, including single-channel stainless steel lumens with dimensions ≥ 1 mm x 125 mm, ≥ 2 mm x 250 mm, or ≥ 3 mm x 400 mm, and polyethylene and Teflon[®] tubing with dimensions ≥ 6 mm x 310 mm.

Operational Simplicity

- One-Button Operation makes the STERRAD[®] 100S System easy to use: push one button to start the cycle.
- Installation is quick and requires only a 208 VAC outlet – no costly plumbing, ventilation, or monitors are required. Plug in and use.

NUMBER OF TRAYS IN 16 HOURS*

* The number of trays processed is based on the most commonly used APTIMAX[®] Trays (for STERRAD[®] 100S System and EtO) and comparable-sized VHP trays times the number of loads completed within 16 hours. The EtO chamber size used for this calculation is 5.0 ft³. The number of trays processed per load is subject to change depending upon tray sizes used.

TECHNICAL SPECIFICATIONS

TOTAL CYCLE TIME	55 minutes	
CYCLE TEMPERATURE	Less than 131°F / 55°C	
DIMENSIONS & WEIGHT	Height	65.5 in / 166 cm
	Width	30 in / 76.5 cm
	Depth	40 in / 102 cm
	Weight	770 lb / 350 kg
STERILIZATION CHAMBER	Configuration	Circular
	Chamber Volume	6.0 ft³ *
	Shelf Dimensions	Upper shelf: 28 in x 17 in / 70 cm x 42.5 cm Lower shelf: 30 in x 13 in / 76 cm x 32.5 cm
INSTALLATION & ELECTRICAL REQUIREMENTS	Placement	Freestanding with built-in wheels for mobility
	Connections	208 VAC, 60 Hz 3 phase WYE, 20A, NEMA L-21-20 receptacle, CBA phase rotation
SERVICE REQUIREMENTS	In operation, the STERRAD® 100S System should not be placed closer than 2 in (5 cm) to a wall at the rear and/or sides of the system. The sterilizer should be installed in a space of sufficient size to permit access to all 4 sides of the system when it is rolled from the rear and/or side walls a distance of 10 ft (3 m). Service access requires a minimum clearance of 3 ft (1 m) on all sides of the system. The power receptacle should be positioned 12 in to 24 in (30.5 cm to 61 cm) above the floor.	
OPERATIONAL ENVIRONMENT	Temperature	50°F to 104°F / 10°C to 40°C
	Humidity	Humidity: 0–95% relative humidity (non-condensing)

SYSTEM ORDERING INFORMATION

All STERRAD® 100S Sterilization Systems include base unit, two-tiered shelf, validation kit, and installation.

CODE	PRODUCT DESCRIPTION
10101	STERRAD® 100S Sterilization System, includes installation
10113	STERRAD® 100S Cassette (5 cassettes/case; 5 cycles/cassette; 25 cycles/case)
14324	STERRAD® CYCLESURE® 24 Biological Indicator (BI) (30/box; 2 boxes/case; 60/case)**
20224	STERRAD® 100S Accessory Kit 2.0 (Single-Ply Printer Paper)
20225	STERRAD® 100S Accessory Kit 2.0 (Double-Ply Printer Paper)
99013	STERRAD® 100S System Seismic Restraint Kit

EDC: Completing your endoscope workflow

EDC – Endoscope Drying Cabinet

Endoscope drying and storage is of essential importance in order to protect endoscopes and assure that they are ready for immediate reuse, even after extended storage periods. Endoscope disinfection prior to reuse is not necessary.

Effective drying

The EDC is connected to a medical-grade dry air supply. This assures the highly efficient drying of endoscopes at low temperatures. Medical-grade air is also supplied during storage of the endoscopes. The ambient environment of the chamber is continuously flushed with sterile HEPA-filtered air provided by an integrated ventilator.

Compatible endoscopes

The EDC can store up to seven Olympus flexible medical endoscopes. It is also compatible with a large variety of other branded medical flexible endoscopes. Dedicated adapters can be provided by Olympus. They assure that all internal channels of the endoscopes are effectively flushed with air.

Environment

As the EDC supplies medical-grade dry air, no heating or other air treatment for drying of the endoscopes is required. This removes the need for heating or unnecessary pollution of surrounding areas.

Traceability

The EDC (model D only) is equipped with a RFID reader which is fully compatible with ETD3 endoscope ID and with ENDOALPHA Documentation (ENDOBASE) protocols. This allows traceability of all endoscopes. Additionally, access to the cabinet can be restricted to authorised persons only.

Documentation

The drying and storage conditions of each endoscope can be documented on a printer or can be transferred into the Olympus ENDOALPHA Documentation (ENDOBASE).

Maintenance / Service

All relevant monitoring equipment is located inside a drawer next to the cabinet. This allows easy access for service and maintenance activities.

An Olympus CDS system approach product

Touch-screen display

Capacity for seven endoscopes

RFID-based user and endoscope ID

Easy to trace endoscope information

Quick access to all monitoring equipment

Job _____

MetroTrux™ BULK AND CONVERTIBLE LINEN TRUX

MetroTrux™ are constructed of an advanced polymer material that is solid and durable, so they will endure tough challenges. And because they will not rust, corrode, dent, flake, chip or peel, they will provide you with years of reliable service. Lightweight yet rugged construction is forgiving, so MetroTrux will not damage walls or doorways.

- **Aesthetic:** Bulk and Convertible Linen Trux offer a professional, pleasing appearance in the healthcare environment. Standard charcoal blue color.
- **Easily Maneuverable:** Lightweight construction and molded hand grips make steering easy. Smooth rolling casters roll effortlessly, even over uneven surfaces.
- **Cleans Easily:** Unique cart construction, combined with standard drain holes on the bottom of the cart, allows for easy washing and drainage.
- **Convertible Linen Trux** offer the only integral, convertible shelving system in a polymer truck. By positioning the two folding shelves either horizontally or vertically, three different truck configurations become possible.
 1. Folding shelves can be positioned horizontally for easy transport of, and accessibility to, fresh linen.
 2. Folding shelves can be positioned vertically – dropped to become, in essence, an enclosure panel – creating a spacious rolling bin for the collection and the transportation of soiled linen.
 3. While folding shelves are in a vertical position, the lower folding shelf can be flipped out and up, enabling contents to be unloaded with a minimum amount of handling.
- **Bulk Trux:** Available in 48 (1.4 cubic meters) cubic foot capacity, Bulk Trux provide the perfect solution for storage and transport of bulky, hard to handle items. Use for transport of laundry within the hospital, from a commercial laundry to the hospital, or to transport bulk supplies such as I.V. bags and admission kits.

Design & Construction Features

- Heavy gauge type 304 stainless steel all-welded construction.
- Inverted "V" edge rim retards spillage.
- Unique deep-drawn positive-drain bowl assures complete drainage to meet the most stringent health code requirements.
- Water inlet: 1/2" (13mm) NPS.
- Drain outlet: 1 1/2" (38mm) NPS.
- Six models to choose from.

Options / Accessories

- P-trap
- Tail piece
- End splashes
- Front skirt
- Side mount wall bracket
- MICROGARD®* antimicrobial protection

Waste > BRUTE® Utility

2620 BRUTE® Container without Lid

Durable, heavy-duty containers for a variety of uses.

- All-plastic, professional-grade construction will not rust, chip or peel; resists dents.
- Strong, snap-on lids are available for secure, stable stacking.
- Reinforced rims add strength and durability.
- Built-in handles allow easy, non-slip lifting and anti-jam nesting.
- Double-ribbed base increases stability and dragging capacity.
- Gray, White and Yellow are USDA Meat & Poultry Equipment Group Listed and assist in complying with HACCP guidelines.
- Certified to NSF Standard #2 (gray, white and yellow) and Standard #21 (all colors)
- Custom imprinting available; contact Rubbermaid Customer Service at (800) 347-9800 for details.

SPRING PLATFORMS (BACKSAVERS)

AVAILABLE FOR ALL STARCARTS

How do **SPRING PLATFORMS** or **BACKSAVERS** work? As materials are loaded in the cart, the platform automatically lowers with the weight. As the materials are removed the platform raises to an optimum working level!

FEATURES:

- Solves ergonomic problems
- Eliminates excess bending
- Different spring tensions accommodate light or heavy loads
- Heavy duty vinyl cover is strong and easy to clean
- Easy to install – just hook it onto the lip on the cart!

FEATURES: 3" all swivel threadguard casters. Plated steel undercarriage.

MINI STARCARTS™

Model Number	Bu.	Cu. Ft.	Inside (L x W x H)	Outside (L x W x H)	Max Load	Shipping Weight
100 A	4	5	18" x 18" x 23"	21" x 21" x 27"	200	20
105 A	5	6	30" x 16" x 24"	33" x 19" x 28"	200	25
350 A	6	7	30" x 20" x 20"	33" x 23" x 24"	200	25

DSB4848-05

Floor Scale System

Convenient indicator storage for shipping

- **Capacity**– 2500 kg x 0.5 kg (5000 lb x 1 lb)
- **Legal for Trade**– NTEP certified at 5,000 divisions, Class III
- **Versatile Indicator**– For many applications including shipping, counting, totalizing and check weighing functions
- **Finish**– Powder coat paint
- **Load Cells**– Four alloy steel potted load cells
- **RS-232**– Standard serial string with time and date
- **Function**– Checkweighing, count, weight, total and print
- **Rugged Construction**– Thick safety tread top plate with heavy duty welded wide channel supports

VALUE IN WEIGHING

DSB4848-05 Floor Scale System

DSB Specifications

Floor Scale Material:

Construction: Mild steel
5 mm (0.19") deck with safety tread

Capacity: 2500 kg x 0.5 kg (5000 lb x 1 lb)

Platform Dimensions: 1.21 m x 1.21 m (48" x 48")

Height Dimensions: min 102 mm (4.0");
max 118 mm (4.6")

Finish: Powder coat paint

Load Cell Rated: NTEP, IP65

J-Box Construction: Mild steel

Loadcell Material: Alloy tool steel potted

Loadcell Rated Output: 3 mv/V

Loadcell Output Resistance: 350 ohm

J-Box Access: Top access for easy installation and service

Leveling Feet: Four top access holes for quick installation

Threaded Eye Bolts: Four threaded top access eye-bolt
holes for easy mobility and pit service

Corner Protection: Closed corners to prevent damage
to leveling feet while installing the scale

Overload Protection: 150% of rated capacity

End Loading: 100% of rated capacity

Operating Temp: -10° C to 40° C (14° F to 104° F)

Accuracy: NTEP at 5000 divisions, Class III

Interface Cable Length: 4.6 m (15')

Shipping Weight: 116 kg (225 lb)

Certifications: NTEP CC #11-081

Product Code: AWT05-505728

SBI-505 Specifications

Construction: Mild steel with stainless steel desk stand
or wall mount stand

Dimensions: 47 mm (W) x 220 mm (L) x 149 mm (H)
1.875" W x 8.675" L x 5.875" H

Finish: Powder coat paint

Rated: IP65

Load Cell Capability: 6 @ 350 ohm

Excitation: 5 VDC

Internal ADC: 2,000,000

Display Resolution: up to 30,000

Display: Six digit 20 mm (0.8") high red LED

Annunciators: -0-, motion, Gross, Net, tared, Total, pcs,
lb, kg, Lo, OK, Hi

RS-232: Female DB9 connection

Time and Date: Military format

Operator Keys: On/Off, Total, Count, kg/lb, Gross, Tare,
Zero, Print

Operating Temp: -10° C to 40° C (14° F to 104° F)

Power: 120/220VAC

Output: 9.0V center positive

Calibration: Front panel accessible

Accuracy: NTEP at 5,000 divisions, Class III

Shipping Weight: 1.3 kg (2.875 lb)

Certifications: NTEP CC #11-082

Product Code: AWT05-505729

Optional Power Supply:

AWT05-505962: EU PSU

AWT05-505961: UK PSU

Protect machines with properly rated, common-trip, circuit breakers ONLY. Warranty void if not properly installed. Contact us for more information and for availability of machines for electric services not listed. Specifications subject to change without notice. Electrolux/Bemil assumes no responsibility for errors or omissions in this information.

Example: 40% water savings at half load

Automatic Weighing System (AWS)

Saving on utility costs, AWS calculates the right amount of water based on load weight. With each wash cycle, AWS automatically determines the weight of the load and adds precisely the right amount of water resulting in reduced water consumption and energy costs. AWS is a software program built into the wash cycle and is featured on Compass and Clarus Control "H" series washers.

When using AWS, we recommend using optional DMIS, our detergent management information system. This will ensure that the correct amount of detergent is used. You'll see immediate savings in chemical costs.

Soft Mount for easy installation on wood floors, upper levels, and over basements.

Features and benefits:

- Up to 350G ultra high-speed extraction for super-fast drying.
- Extremely low water and energy consumption for big utility savings.
- Shock absorbing suspension system allows for easy installation on wood floors, upper floors, and over basements. Minimizes the impact of unbalanced loads.
- Door unlocks immediately at the end of wash cycle.
- Optional steam injection for precise control of water temperature.
- Convenient 4-compartment supply dispenser (W475H-W4300H)
- Built-in connection for automatic liquid injector.
 - Compass Control provides 5 liquid chemical signals.
 - Clarus Control provides 4 liquid chemical signals.
 - Available options: Clarus expands to 8 signals.
- Stainless and galvanized steel in all vital parts for maximum rust protection.
- Interchangeable parts from one machine size to another.
- SuperBalance™ for correct extraction force regardless of load size or composition.
- Integrated weighing system (option with Clarus Control)

Electrolux models W475H and W4105H are Energy Star rated. They meet strict energy efficiency guidelines set by the EPA & US Department of Energy. Our larger machines are also designed to save water and energy and achieve impressive Modified Energy Factor (MEF) results.

Electrolux Products are certified in accordance with the ISO 9001 and ISO 14001 standards, guaranteeing our long term commitment to quality and the environment.

Superior Wash Cycle Control

With our Wash Program Manager software you can easily create custom wash programs on your PC.

Compass Control provides programs developed specifically to meet your needs (health-care, restaurant, hotel, firehouse, and more). Modify standard wash programs to find the perfect balance between low water and energy consumption while optimizing wash results and processing time – or create your own programs. Reduce operator error by only displaying the programs you use. Multilingual. Available on 18-75 lb. capacity models.

Fully programmable menu-driven microprocessor control combines timing, optimal water levels, and temperature* to ensure superior results. Includes nine standard wash programs and provides the ability to create and store up to 192 custom programs. Smart card interface allows off-site programming by chemical company professionals. Available on 18-250 lb. capacity models.

* temperature maintained on self heated machines only.

Electrolux H-Series soft-mount washers spin faster resulting in less drying time, significant energy savings, and higher productivity. You'll appreciate the quick turnaround time, easy to use controls, and exceptional results.

Electrolux Dryers for OPL

30x30 & 45x45 stack, 35, 67, 83, 100 & 135 lb. capacities

High performance and significant energy savings.

Electrolux dryers are precision-engineered for efficiency, ease of use, and superior drying results. Perfect for hotels, motels, hospitals, nursing homes, gyms, salons, schools, and other facilities. You'll appreciate the "green" engineering, easy operation, and years of low maintenance.

Features and benefits:

- Optimal combination of gas consumption (Btu/hr) and airflow (CFM) provides the fastest drying with lowest energy consumption.
- Extra large doors make loading and unloading easy.
- Self-cleaning lint screen & large lint compartment for easy maintenance.
- Quiet operation. Designed to keep noise level below 70 dB (A).
- Reversing drum (standard) minimizes tangling and wrinkling. Improves dryer efficiency and makes flatwork finishing easier.
- Fresh air intake adapter acquires air from a location outside the dryer area. Useful when dryers are installed in interior or air-conditioned space.

35, 67 and 83 lb. dryer features:

- **Axial airflow** and tight construction for extremely low energy consumption
- **Compass Pro** program control
- Top Exhaust Kit (optional)

Residual Moisture Control:

The Residual Moisture Control (RMC) option is available in all Electrolux single pocket dryers. RMC prevents damage to garments caused by overdrying and reduces lint and wrinkles by automatically stopping the dryer when the exact pre-set moisture level is reached. The amount of residual moisture in the fabric is important for proper finishing. If the load is to be further processed by an ironer, RMC will shut the dryer off while there is still sufficient moisture for the ironer to work effectively. By not overdrying, you'll benefit from longer linen life and significant labor and energy savings.

Electrolux OPL Dryers available in 30x30, 45x45, 35, 67, 83, 100 and 135 lb. capacities. Available in stainless (optional) or wave front panel.

35, 67 and 83 lb. with Axial Airflow and Compass Pro control. Other options include: Stainless steel drum, RMC, Heat recovery system: Heat Recovery Pipes (HRP), fresh air intake, exhaust on top. Call for more information.

The future of professional laundry is here.

Electrolux is dedicated to providing you with the very best precision-engineered washers, dryers, and flatwork ironers. Production units are certified in accordance with ISO 9001 (Quality) and ISO 14001 (Environmental Management) standards, and products are CE labeled. Take control of your laundry operations with Electrolux Professional Laundry.

Refer installation and servicing to qualified, licensed personnel. Always read installation and operating manuals and consult local codes before installation. Protect machines with properly rated, inverse-time, common-trip, industrial-type circuit breakers ONLY. Warranty void if not properly installed. Advise when placing order if dryers are for installation at altitudes in excess of 1000 feet above sea level, as this may require a gas-orifice change. Contact Laundrylux for more information and availability of machines for electric services not listed. Specifications subject to change without notice. Laundrylux assumes no responsibility for errors or omissions in this information.

ELECTROLUX DRYER CONTROL

Compass PRO available on 35, 67, and 83 lb. dryers • Selecta II on 30x30, 45x45, 100 and 135 lb. dryers

Compass Pro

- Large & clear display with control knob for easy program selection
- Easy access with user-friendly interface
- Language selection
- Drying program packages optimized for Economy, Care and Time
- Service program for adjustment of parameters
- USB Type B connection

Selecta II

- Precise control of temperature, residual moisture, program, time, reversing and cool-down selection.
- Displays selected program, remaining drying time, cool-down time and actual temperature.
- Comprehensive diagnostics and service functions.

Call today for information on the full line of Electrolux Professional washers, dryers, ironers, and low-cost financing & leasing.

SUPER ERECTA SHELF® WIRE SHELVING

- **Unique Design:** The open wire design of these heavy-gauge carbon-steel or stainless steel shelves minimizes dust accumulation and allows a free circulation of air, greater visibility of stored items and greater light penetration.
- **Versatile Construction:** Super Erecta Shelf® wire shelving can change as quickly as your needs change. By using various accessories, hundreds of shelving configurations become possible.
- **Fast, Secure Assembly:** SiteSelect™ Posts with the triple-groove visual guide feature, have circular grooves at 1" (25mm) intervals and are numbered at 2" (50mm) intervals. A patented, tapered split sleeve (plastic or aluminum) snaps together around each post. Tapered openings in the shelf corners slide over the tapered split sleeves providing a positive lock. Shelf is assembled in minutes without the use of any special tools.
- **Shelf Ribs:** Run front to back, allowing you to slide items on and off shelves smoothly.
- **Shelf Accessibility:** Shelves can be loaded/unloaded easily from all sides. This open construction allows use of maximum storage space of cube.
- **Adjustability:** Shelves can be adjusted at 1" (25mm) intervals along the entire length of the post.
- **Durable:** Super Erecta Shelf® wire shelving is available in four options: Super Erecta Brite™, chrome-plated, stainless steel and Metroseal™.
- **Adjustable Feet:** Bolt levelers compensate for surface irregularities.

NOTE: For Metroseal shelving information see sheet No. 10.10.

"S" Hooks

Used to "add-on" shelving units with only two posts required.
Cat. No. 9995Z

SiteSelect™ Posts

Height*	Approx. Pkd. Wt.	Cat. No. Plated	Cat. No. Stainless		
				(in.)	(mm)
7 ⁵ / ₈	190	1/2	0.2	7P	
14 ¹ / ₂	368	1	0.5	13P	13PS
28 ¹ / ₂	724	1¾	0.75	27P	27PS
34 ¹ / ₂	876	2	0.9	33P	33PS
54 ⁹ / ₁₆	1386	3	1.4	54P	54PS
62 ⁹ / ₁₆	1589	3½	1.6	63P	63PS
74 ⁵ / ₈	1895	4	1.8	74P	74PS
86 ⁵ / ₈	2200	5	2.3	86P	86PS

*Height includes leveling bolt and cap.

SiteSelect™ Posts are grooved at 1" (25mm) increments and numbered at 2" (50mm) increments. Posts are triple-grooved every 8" (203mm) for easy identification.

Important: When ordering by components remember that stability decreases as the ratio of height to width increases. Units should be kept as wide and low as possible. With 14" shelving, foot plates should be used and secured to the floor on free-standing units; on mobile units, maximum post height is 54".

SPRING PLATFORMS (BACKSAVERS)

AVAILABLE FOR ALL STARCARTS

How do **SPRING PLATFORMS** or **BACKSAVERS** work? As materials are loaded in the cart, the platform automatically lowers with the weight. As the materials are removed the platform raises to an optimum working level!

FEATURES:

- Solves ergonomic problems
- Eliminates excess bending
- Different spring tensions accommodate light or heavy loads
- Heavy duty vinyl cover is strong and easy to clean
- Easy to install – just hook it onto the lip on the cart!

FEATURES: 3" all swivel threadguard casters. Plated steel undercarriage.

MINI STARCARTS™

Wire Shelving

SUPER ERECTA SHELF® WIRE SHELVING

- **Unique Design:** The open wire design of these heavy-gauge carbon-steel or stainless steel shelves minimizes dust accumulation and allows a free circulation of air, greater visibility of stored items and greater light penetration.
- **Versatile Construction:** Super Erecta Shelf® wire shelving can change as quickly as your needs change. By using various accessories, hundreds of shelving configurations become possible.
- **Fast, Secure Assembly:** SiteSelect™ Posts with the triple-groove visual guide feature, have circular grooves at 1" (25mm) intervals and are numbered at 2" (50mm) intervals. A patented, tapered split sleeve (plastic or aluminum) snaps together around each post. Tapered openings in the shelf corners slide over the tapered split sleeves providing a positive lock. Shelf is assembled in minutes without the use of any special tools.
- **Shelf Ribs:** Run front to back, allowing you to slide items on and off shelves smoothly.
- **Shelf Accessibility:** Shelves can be loaded/unloaded easily from all sides. This open construction allows use of maximum storage space of cube.
- **Adjustability:** Shelves can be adjusted at 1" (25mm) intervals along the entire length of the post.
- **Durable:** Super Erecta Shelf® wire shelving is available in four options: Super Erecta Brite™, chrome-plated, stainless steel and Metroseal™.
- **Adjustable Feet:** Bolt levelers compensate for surface irregularities.

Item # _____

Job _____

MetroTrux™ BULK AND CONVERTIBLE LINEN TRUX

MetroTrux™ are constructed of an advanced polymer material that is solid and durable, so they will endure tough challenges. And because they will not rust, corrode, dent, flake, chip or peel, they will provide you with years of reliable service. Lightweight yet rugged construction is forgiving, so MetroTrux will not damage walls or doorways.

- **Aesthetic:** Bulk and Convertible Linen Trux offer a professional, pleasing appearance in the healthcare environment. Standard charcoal blue color.
- **Easily Maneuverable:** Lightweight construction and molded hand grips make steering easy. Smooth rolling casters roll effortlessly, even over uneven surfaces.
- **Cleans Easily:** Unique cart construction, combined with standard drain holes on the bottom of the cart, allows for easy washing and drainage.
- **Convertible Linen Trux** offer the only integral, convertible shelving system in a polymer truck. By positioning the two folding shelves either horizontally or vertically, three different truck configurations become possible.
 1. Folding shelves can be positioned horizontally for easy transport of, and accessibility to, fresh linen.
 2. Folding shelves can be positioned vertically – dropped to become, in essence, an enclosure panel – creating a spacious rolling bin for the collection and the transportation of soiled linen.
 3. While folding shelves are in a vertical position, the lower folding shelf can be flipped out and up, enabling contents to be unloaded with a minimum amount of handling.
- **Bulk Trux:** Available in 48 (1.4 cubic meters) cubic foot capacity, Bulk Trux provide the perfect solution for storage and transport of bulky, hard to handle items. Use for transport of laundry within the hospital, from a commercial laundry to the hospital, or to transport bulk supplies such as I.V. bags and admission kits.

AIR CHICAGO

America's Most Popular Small Piece Folder

CHICAGO®

THE ORIGINAL

AIR INDUCED RESPONSE FOLDER SERIES

For those who demand the best in folding precision, dependability, and state-of-the-art control, Air Chicago is as precise and consistent folding pool towels for five star hotels as it is for blankets and patient apparel in healthcare facilities. In addition to the standard Air Chicago model which has been America's best selling towel folder since its introduction, the series now has five models to meet the needs of healthcare, hospitality, and commercial laundries by processing the widest variety of items in the industry.

Air Chicago
Air Chicago XL and XXL
Air Chicago Slim
Air Chicago Triple Sort

Chicago revolutionized French style folding when it developed and patented the original Air Chicago design in 1991. Customer satisfaction has fueled the growth in demand for Chicago-style Air Induced Response folding. That demand has led to the creation of the models you see in the table below. Today, these

automated labor-savers handle everything from hand towels to bathmats to large thermal blankets. Because each model builds upon the original Air Chicago concept, you're assured of the maximum speed, accuracy and reliability that has made Air Chicago #1 in its class – regardless of which model you choose.

Textiles		Piece Size	
		Minimum	Maximum
AIR CHICAGO	Towels (Bath, Hand and Pool), Pads, Bathmats, Baby Blankets, Gowns, Scrubs and Apparel	16 x 20" (400 x 500mm)	36 x 72" * (915 x 1830mm)
AIR CHICAGO XL	Same as standard Air Chicago plus Bath/ Thermal Blankets up to 96" (2400mm) long	16 x 20" (400 x 500mm)	36 x 96" * (915 x 2400mm)
AIR CHICAGO XXL	Same as XL Air Chicago plus Bath/ Thermal Blankets up to 108" (2740mm) long	22 x 24" (560 x 600mm)	36 x 108" * (915 x 2740mm)
AIR CHICAGO SLIM	Bath and Hand Towels, Bib Aprons	15 x 18" (375 x 450mm)	30 x 52" (750 x 1300mm)
AIR CHICAGO TRIPLE SORT	Bath and Hand Towels, Bathmats	16 x 20" (400 x 500mm)	40 x 72" (1020 x 1830mm)

*Optional Extra-wide (XW) width available - 48" (1200mm)

Piece size and item type guidelines This chart is to be used as a reference for understanding the capabilities of each Air Chicago model. Please consult your local Chicago professional or the factory for processing other item sizes or types.

Samples Because the range of available item fabrics, sizes, and specifications is always changing, if there is a question as to which Air Chicago model will most efficiently process a particular item, you are invited to send samples to the factory where they will be folded and returned to demonstrate the results and confidence we have in the Air Chicago series.

Standard on All Air Chicago Models: A Complete Package of Convenience and Efficiency Features

- Split input conveyor allows faster, easier and more accurate feeding than ever
- Switch allows operator to select continuously running feed input conveyor or special auto pacing feed input conveyor with automatic pause
- Crossfolds items once or twice into halves, thirds, or quarters
- Primary folding may be bypassed for direct crossfolding of items such as bathmats or surgical pants
- Folded items are stacked on delivery conveyor which can be installed in a choice of discharge directions
- **CHI** microprocessor with alpha-numeric message screen for set-up, operating, testing, and diagnostic functions
- Powered item width adjustment
- All measurements made by reliable photosensor with LED status indicator
- Total piece counts displayed by item category on **CHI** message screen
- Stop buttons, interlocked panels, 24 volt controls and bilingual/pictorial safety labels
- Stain/tear reject button discharges these items separately
- Auto jam shutdown with audible jam alarm and jog reverse features
- Air pressure regulators for each folding section assure peak performance
- Locking casters allow unit to be easily moved for maintenance access
- Optional red/green production pacing lights can be programmed to desired feed rate for easy monitoring of operator efficiency

The Original Air Chicago

Air Induced Response – A Better Idea

Folders have traditionally formed a French (one-third primary) fold by moving the towel or other item over a mechanical slide mechanism which directs it into a folded configuration. This method is not consistently accurate on all item sizes and thicknesses because it is dependent on a changing relationship between mechanical components, and is always working against gravity, friction, and the natural geometry of each item. These limitations cause the inconsistencies, jamming, and “fishtail” effect often found on French folders using mechanical blades.

To eliminate these problems, Chicago developed and patented the first French folder that works in a totally different way. When an operator selects the items to be processed, the **CHI** microprocessor takes over and determines the correct number, type, and width of primary fold and crossfolds, as well as proper stack height. As the item is fed by the operator onto a conveyor field, **CHI** tracks it and directs a series of precise air pulses through an air permeable barrier to perform a French or one-half primary fold. Because the item is flat and fully extended when folds are made, all primary folds are crisp and straight. The item then continues to the crossfold section where air pulses automatically make the correct number of crossfolds before discharging neatly folded items onto the stacker and conveyor for delivery to desired discharge point at front, rear or side of folder.

After the pre-determined stack height is reached, **CHI** advances the completed stack towards the end of the conveyor for operator removal or direct transfer to a master conveyor system. Air Chicago's continuous monitoring system and blade-free air pulse folding ensure that pieces are accurately folded so that costly refolding is not required.

AIR CHICAGO will crisply and accurately French fold and crossfold bath, hand or pool towels and gowns of all sizes into quarters, thirds, or halves. (Rear return configuration shown)

Chicago High Intelligence (CHI)

CHI is the first finishing control that successfully integrates the power of an advanced microprocessor with a message display and operator panel that anyone can easily use. During installation, a library of factory-programmed item descriptions is used to set up the correct number and style of folds for each item type to be processed. **CHI** stores all folding variables, including air pulse patterns,

air pressure, speed, conveyor movements, and stack heights to produce the best finished package for each item type. With the push of a button, Air Chicago can also be manually controlled at any time.

Item description, folding functions, category piece counts, and testing/diagnostic functions are clearly displayed on **CHI's** bright vacuum fluorescent message screen to guide both operators and maintenance staff. If there is a problem, **CHI** pinpoints the area and alerts operators audibly and through the message screen so prompt action

can be taken. To analyze its performance, maintenance staff can run individual test sequences for each fold function and make needed adjustments through the message screen. There are no codes to memorize, complicated numeric keypads to learn, or difficult ladder logic to follow.

To ensure the system's integrity and ease of operation, Chicago designs and manufactures its own electronic hardware and software. Superior processing power makes **CHI** faster, more versatile, and “smarter” than off-the-shelf PLC's used by manufacturers without the capacity to design and build their own electronics. **CHI** features include the power to customize folding parameters and speed for each item type to increase the quality and volume of finished pieces.

CHI control is also used on Chicago's other high production feeders, ironers and folders so operators and maintenance staff only need to learn one simple system to manage the laundry's entire finishing area.

**Air Chicago
XL**

**Air Chicago
XXL**

All Air Chicago models may be set up in the field for front or rear discharge. Arrows in diagram illustrate possible stack flow directions.

Air Chicago XL and XXL – Large Piece Folding

In addition to towels and gowns, Air Chicago XL and XXL will also efficiently fold a wide variety of larger and thicker hospital and institutional items such as bath and thermal blankets and pads.

To fold a wider range of larger items, Air Chicago XL and XXL use an extended folding platform, a sophisticated timing and switching sequence, and a sectionalized air delivery system to process larger items. Using XL or XXL, one person can fold and stack bath or thermal blankets that require a folding field larger than 36 x 72" (915 x 1830 mm). XL model folds items up to 96" (2400 mm) long, while the XXL folds items up to 108" (2740 mm) long. When processing items that are wider than the 36" (915 mm) folding field, the operator folds the item once lengthwise when feeding. All Air Chicago models are also available in Extra Wide (XW) models to accommodate items up to 48" (1200 mm) wide, [96" (2400 mm) wide before prefolding]. Two operators may also be used to feed XL or XXL in an alternating pattern to achieve folded blanket production rates comparable to the fastest automated feeder/folder combination.

The flexibility to fold blankets as well as towels, gowns, and pads makes Air Chicago XL and Air Chicago XXL the most versatile folders available. For laundries with large quantities of bath/thermal blankets, one person can fold blankets using one-third the floorspace and capital investment of a separate feeding device and folder. Their flexibility also makes XL and XXL ideal for laundries without enough blankets to justify an automatic folder, but that do have sufficient work to achieve real cost savings when the volume of towels, gowns, pads, and blankets is combined and folded by one machine. This makes the pay-back period of these models extremely attractive for more users than ever.

Bridge the Gap...

to Smoother Linen Flow, Reduced Manual Handling and Better Stack Quality

The Bridge linen transition conveyor neatly transfers stacks of folded linen from a large piece or towel folder onto a master linen conveyor system. After receiving stacked linen directly from a folder's discharge conveyor, the Bridge's motor-driven roll advances the stack across its heavy duty mini-conveyor. A belt drive system moves the stack and mini-conveyor to a position extended slightly above the master conveyor. Linen is moved forward by motor-driven ribbons and automatically unloaded onto the master conveyor as the Bridge retracts to its original position – ready for the next stack. The result is neatly and correctly positioned stacks successfully merged into the flow of the master conveyor without tipping or colliding with stacks from other production lines.

CHILINC (Chicago Laundry Information Network Connection)

Using the CHI Panel microprocessor and proven networking technologies, CHILINC is an automatic data recording and reporting system that connects a laundry's management team to all of its flatwork finishing equipment. Current and historical production data, piece counts, operator efficiency rates, and individual machine utilization factors give managers the information they need about their equipment and their people so that high-quality finished linen of all types can be consistently produced as cost-effectively as possible.

Air Chicago Slim Towel, Gown, Apron Folder/Stacker

Now there is a compact member of the Air Chicago family specifically designed for aprons, in addition to towels and other small items normally processed through a towel folder.

Air Chicago Slim has the ability to fold and crossfold aprons, as well as towels and other items with a minimum piece size of 15 x 18" (375 x 450mm) and a maximum piece size of 30 x 52" (750 x 1300mm). Slim offers a narrower machine footprint than the market-leading "standard" Air Chicago for laundries with limited space while still being able to accommodate and process pieces up to 30" wide. Items may be primary French folded (one-third), or with a half primary fold with up to two crossfolds. Slim also has the ability to bypass primary folds and perform crossfolds only, if desired. Like the "standard" Air Chicago, all folding, programming and diagnostic functions on Slim are controlled by **CHI** microprocessor for effortless use by operators and maintenance staff.

To handle the difficult job of folding aprons, Slim offers specially designed reversing conveyors and the ability to tuck apron neck and strings into the fold while the item is

moving or briefly paused for a neater finished package. Aprons as well as other items can be inspected/graded by the operator using the pushbutton stain/tear reject system to separately discharge items for reprocessing.

Slim also features a special retracting stack transfer conveyor that smoothly moves folded stacks of items from the drop conveyor to the discharge conveyor for a consistent 90° item transition.

In the field, it is also possible to use multiple machines (up to four across) on the back of an ironer to automatically receive and fold ironed small pieces (including aprons) for folding/stacking.

AIR CHICAGO SLIM is the newest model of the Air Chicago family specifically designed for aprons, towels, and other small to medium sized items, as well as laundries with limited floorspace.

Triple Sorting Flexibility

For laundries that desire automatic post-sorting ability, Air Chicago Triple Sort combines the convenience of automatic three way sorting with the folding accuracy, speed, and dependability for which the Air Chicago Series is well-known. Air Chicago Triple Sort enables an operator to randomly feed up to three different size towels or gowns for folding. As items are loaded, the folder's input ramp can pause briefly (without interrupting other folding and conveyor functions), before **CHI** advances the item to the automatically adjustable folding bed for a crisp and accurate French fold. **CHI** microprocessor automatically determines the item type, chooses and performs the correct fold pattern, and directs the folded item to one of three internal drop zones for stacking with like items in pre-selected stack heights. (Consult factory for stack size limitations.)

After each stack is completed, it is advanced to an attached discharge conveyor set up to deliver completed stacks to the front or rear of unit at the left or right side. An optional second discharge conveyor can be added to allow two-way work flow to front or rear.

More Speed When You Need It When auto sorting is not required because only one size is being processed, Air Chicago Triple Sort may be operated in a continuously running "non sort" mode (like a standard Air Chicago) to maximize speed and output. Most importantly, items are accurately folded to the precise tolerances that have made Air Chicago the standard by which all towel and gown folders are judged.

Dimensions

NOTES

1. Conveyor discharge (shown in top view) can be arranged for left, center or right rear discharge, or a choice of left or right front discharge.
2. Millimeter dimensions in parenthesis.
3. Specifications subject to change without notice. Consult factory for certified construction floor plan.

A Complete Range of Feeding, Ironing and Folding Solutions

Because CHICAGO specializes only in flatwork finishing equipment, it offers the world's widest range of high production separating, feeding, ironing, folding, and sorting equipment. Complete flatwork finishing systems range from automated multi-roll systems producing over 2000 pounds per hour to compact ironers for small on-premise laundries.

Chicago's performance record is unmatched in thousands of installations in commercial, textile rental, institutional, and on-premise laundries. An experienced Chicago professional will be pleased to make an objective equipment recommendation based on your production, space, utility, and budget requirements. Contact your local Chicago distributor or the factory sales assistance office for a no-obligation analysis of your needs.

Job _____

Wire Shelving

SUPER ERECTA SHELF® WIRE SHELVING

- **Unique Design:** The open wire design of these shelves minimizes dust accumulation and allows free circulation of air, greater visibility of stored items and greater light penetration.
 - **Durable Construction:** Super Erecta shelves and posts are constructed of heavy-gauge carbon steel or Type 304 stainless steel.
 - **Choice of Finishes:** Super Erecta Brite™ and chrome-plated for dry storage; Metroseal 3™ with Microban® antimicrobial product protection and stainless steel for corrosive environments; and attractive epoxy color options for merchandising applications.
 - **Versatile:** Super Erecta Shelf® wire shelving can adapt to your changing needs. By using various accessories, hundreds of shelving configurations become possible.
 - **Fast, Secure Assembly:** SiteSelect™ Posts have a double groove visual guide feature every 8" (203mm), circular grooves at 1" (25mm) increments, and are numbered at 2" (50mm) intervals. A patented, tapered split sleeve snaps together around each post. Tapered openings in the shelf corners slide over the tapered split sleeves providing a positive lock. Shelf is assembled in minutes without the use of any special tools.
 - **Adjustability:** Shelves can be adjusted at 1" (25mm) intervals along the entire length of the post.
 - **Shelf Ribs:** Run front to back, allowing you to slide items on and off shelves smoothly.
 - **Shelf Accessibility:** Shelves can be loaded/unloaded easily from all sides. This open construction allows maximum use of storage cube.
 - **Adjustable Feet:** Bolt levelers compensate for surface irregularities.
- Note:** Stainless stationary posts are equipped with stainless steel leveling feet.

Wire Shelves

Split Sleeve

Aluminum Split Sleeve

- **Metroseal 3:** Metro's proprietary epoxy coating contains Microban® antimicrobial product protection. Microban antimicrobial protects the epoxy coating from bacteria, mold, mildew, and fungus that cause odors, stains, and product degradation.
- See spec sheet 10.14 for epoxy color options.
- Plastic split sleeves are included with each shelf
Replacements are available: Cat. No. 9985 (bag of 4)
- Aluminum split sleeves are recommended for abusive mobile applications and autoclave applications.
Cat. No. 9986Z (bag of 4 with zinc C-rings)
Cat. No. 9986S (bag of 4 with stainless steel C-rings)
- Load capacity (evenly distributed) per shelf
Depths: 14" to 24" (355 to 610mm)
800 lbs. (363kg) for lengths of 18" to 48" (457 to 1219mm)
600 lbs. (272kg) for lengths of 54" (1370mm) or longer
- Load capacity (evenly distributed) per unit.
Stationary shelving units have a maximum load capacity (evenly distributed) of 2,000 lbs. (907kg)
Mobile units have a maximum capacity of three times the caster load rating up to but not exceeding 1,000 lbs. (453kg) total. Consult the Metro catalog for caster load ratings
- SUPER ERECTA SHELF meets Government Specifications MIL-S-40144E.

Foot Plates

- Use to bolt units to the floor, or when a broader, more stable foot is desired. Foot plates also help to protect floors by distributing the point load of the shelving unit across a larger contact point.
- Foot plates (completely tightened) add 1/8" (3mm) to the specified heights of each stationary post on the table.
Zinc Cat. No. 9993Z
Stainless Steel Cat. No. 9993S

"S" Hook

- Used to add on shelving units with only two posts required. Order two per shelf level.
Cat. No. 9995Z

Trophon EPR

Distributed exclusively by GE Healthcare, the Trophon® EPR is a complete ultrasound transducer High-Level Disinfection system that's fast, easy to use, environmentally friendly and quality assured. It uses a unique platform technology to effectively disinfect the transducer, including the shaft and handle—in just seven minutes between patients.

When used as directed the Trophon EPR meets guidelines set forth by the FDA and CDC for High-Level Disinfection. For sale in the U.S. and Canada only.

Trophon EPR

**Get it right,
get it fast,
get it from
MASS™
Medical
Storage**

Get it right. There’s no room for mistakes - that’s why more hospitals look to the experts at MASS™ Medical Storage for advice on storage systems. The MASS™ Medical Storage tradition of quality spans 15 years and is recognized around the world by hospitals large and small.

Get fast quotes. We turn quotes around in 24 hours, or less. A few quick questions, and our experts can formulate a proposal that meets your needs, whether you are a small clinic, or a large hospital.

Explore options. A local Representative will meet with you in person to discuss your needs in depth. They will explain the wide array of options available. Additionally, our Corporate Sales and Design Services Staff will also answer any questions you may have.

Feel confident. We supply some of the nation’s largest hospitals with medical storage solutions. You feel confident knowing you’re working with experts that help you make the best decision to meet *your* needs.

Trust a reputable source.

MASS™ Medical Storage has been the choice for storage solutions in leading medical institutions around the world for more than 15 years. MASS™ is proud to partner with Aria Medical, Attania, Boston Scientific, Cook Medical, IMS, Merry X-Ray, Olympus, Storage Systems Unlimited, and more. In addition, MASS™ continues to be an approved government supplier.

Get fast delivery. Compare lead times and you'll discover why more medical facilities rely on MASS™ Medical Storage.

Make better decisions.

Different departments have different needs. We can help identify the best storage solution for each, based on our experience with thousands of hospitals.

Simplify decision making.

If you're not sure of what you need, start by looking at the pre-configured packages with options and accessories most commonly used by various departments. Call us for practical steps in getting started.

Benefit from smart design.

How people access and store medical equipment and supplies is critical. Ergonomics are considered in the design process. Each product is engineered to promote efficiency and maintain cleanliness with greater ease.

Buy quality. MASS™ has upheld a standard of detail and quality construction worthy of customer loyalty and capital investment. Each MASS™ product is proudly made in America, using state-of-the-art materials and manufacturing technologies. All products are backed by a 3-year Gold Seal Warranty.

BUILD YOUR OWN CART

(Electronic version available by request)

1. Cut out the desired component.
2. Paste or tape component on cart.
3. Build your Small Cart, fax to MASS™ at (913) 438-2275 for QuikQuote™.

Considerations

- Any individual locking drawer requires a stationary LokShelf™, SlotShelf™ or Bin Module above for anchoring the lock.
- Any drawer below a Slide-out Shelf or ABS Basketub™ requires a LokShelf™ above.
- To provide adequate clearance, allow 0.25" above and below each drawer. (not included in above component drawings)
- Allow a minimum of 3" atop a Keyboard Shelf.

FULL-WIDTH COMPONENTS
(Electronic version available by request)

Considerations

- All baskets require a LokShelf™ above for mounting.
- All Bin Modules require a LokShelf™.
- FlexLok™ doors are standard equipment. Otherwise designate HG (hinged door w/ glass), H (hinged door, solid) or NFL (no door) at the end of desired Model Number.

BUILD YOUR OWN CABINET

(Electronic version available by request)

1. Cut out the desired component.
2. Paste or tape component on cabinet.
3. Build your cabinet, fax to MASS™ at (913) 438-2275 for QuikQuote™.

Considerations

- The FifoGlide™ Module is fixed to the back cabinet wall and not readily repositioned. The FifoGlide™ extend out, but not the shelf they're mounted to.
- The 6" Locking Metal Drawer is a fixture unable to be repositioned.
