Re: Concerning Environmental

As you may be aware, that Hydro Quebec is planning to damage all major rivers in Eastern Shore of Northern Quebec.

South of Belcher Islands is only 100 miles from Great Whala River, Hydro Quebec is already on it's project in James Bay.

After we've heard this, we already can see what will happen to our environment, our mainly diet's are fish, seals, birds and sea clams, in the future we won't have these anymore, we can see this problem is ahead of us we need assistance of how we can solve it before it is too late or we are already too late.

In our last B.R.C. 24th session the motion was passed, the motion was referred a support of a way of stopping the prepsal plan of Hydro - Quebec or some way of solving it.

At this time we are invited by a community of Great Whala River, that they are planning to meet with Hydro Quebec, official in the community on November 1st and 2nd of 1989.

Is there anyway that your department could give us support, we're even talking compensation agreement if in the future, our livelyhood could be damaged caused by the Hydro Quebec Project.

Please don't leave us out in this important issue.

P. Kattuk,
Mayor

L. Kittosuk,
Senior Administrative Officer
