2004 NWT COMMUNITY SURVEY

COMMUNITY HOUSING NEEDS: DETAILED RESULTS

Survey Background

In early 2004, the NWT Bureau of Statistics in partnership with the Northwest Territories Housing Corporation (NWT HC), Local Housing Organizations and communities, completed the *2004 NWT Community Survey* in all communities in the Northwest Territories. Overall housing statistics based on the survey were presented in the first report from the survey released in March 2004. This second report includes further analysis of the survey results, as well as examines specific housing issues and opportunities in greater depth. Additional information from the survey is available on the NWT HC and the Bureau of Statistics' web sites (<http://www.nwthc.gov.nt.ca> and <http://www.stats.gov.nt.ca>, respectively).

Statistics in this report are based on responses to housing needs questions from 4,253 households that were collected in January and February 2004. Notes on the methodology for the survey and technical definitions are provided at the end of this report.

The results of this survey are used by the Northwest Territories Housing Corporation to monitor changes in housing conditions and needs, as well as to assist in the targeting of housing resources to communities. The survey findings provide communities with the information needed to make decisions on where funding should be directed to address the specific housing problems and needs identified.

Overall Housing Conditions

The statistical tables in this report provide a detailed examination of housing conditions in the Northwest Territories by a number of characteristics. Information is provided by housing district, community type, household size, tenure, and income levels for most tables. In addition, tables are provided that examine housing issues for selected portions of the population like seniors, single youth, aboriginal persons and one person households.

Report No. 1 on community housing needs from the 2004 NWT Community Survey indicated that there were considerable variations by community and district in both the prevalence and type of housing problems. Adequacy, or households with major problems with the condition of the dwelling, was the most common problem in the Northwest Territories with 14% of households reporting the problem. Suitability, or crowding issues, were reported by 9% of territorial households, while affordability, which is related to the cost of housing, was identified as a problem for 11% of territorial households.

Core Need

While some 29% of households had some form of housing problem, 16% or 2,260 households in the Northwest Territories were in core need. Core need is defined as households with at least one housing problem and total income below the Community Need Income Threshold (CNIT). More information on the CNIT levels and their calculation is provided in Appendix B of this report.

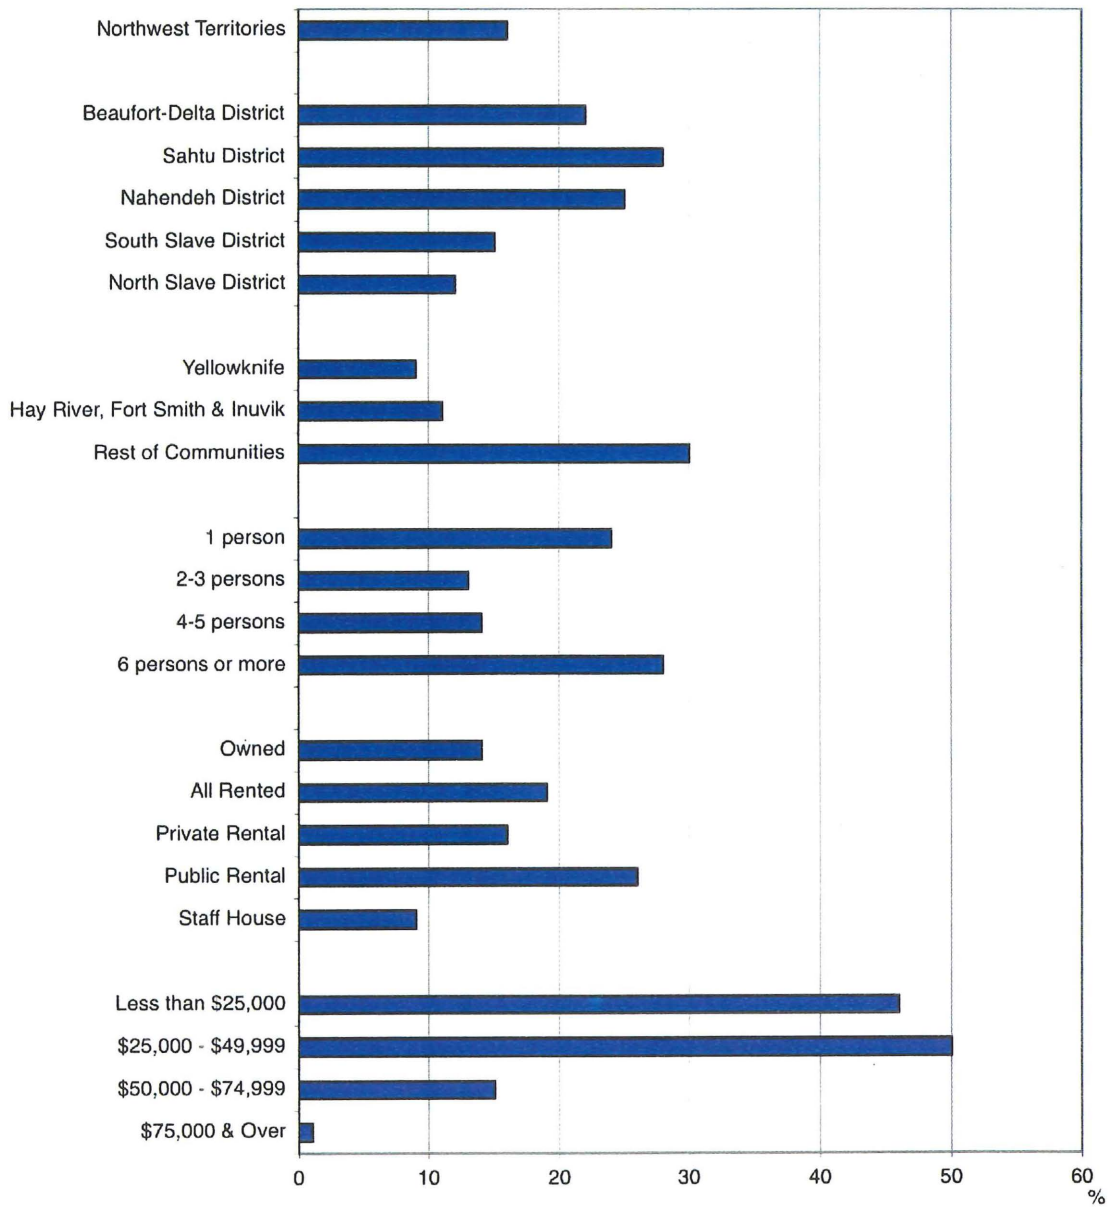

Examining housing conditions by community type shows that some 30% of households in smaller NWT communities were in core need, which compares to 11% for the regional centers of Hay River, Inuvik and Fort Smith and 9% for Yellowknife.

One person households with core need of 24% and households with six or more persons with core need at 28%, were much more likely to be in need than 2 or 3 person households at 13% and 4 or 5 person households at 14% core need. However, the types of problems experienced by small households were quite different from large households. Some 19% of one person households in the Northwest Territories had affordability problems which is about double of any other household size. For large households, an

estimated 46% of households with 6 or more people had suitability problems which again, was much higher than for any other household size.

Examining housing conditions by tenure shows similar overall levels of problems by all types except staff houses. The type of housing problems does vary by tenure. Suitability problems are most common among public housing tenants at 14%. Adequacy problems were most frequently reported by home owners and by public housing tenants at 16%. Affordability problems were most frequently identified by private market rentals at 17%. Overall core housing need was highest among public housing tenants, which may not be surprising given the lower income levels in this group.

*Figure 1
Core Need, by Selected Characteristics
Northwest Territories, Winter 2004*

Both housing problems and core need were closely related to household income, particularly for adequacy and affordability problems. Overall, some 46% of households with incomes under \$25,000 reported some type housing problem, while 51% of households with total income between \$25,000 and \$49,999 reported a housing problem. In comparison, 34% of households with income between \$50,000 and \$74,999 had a housing problem and 17% of households with income over \$75,000 had a housing problem.

Specific Types of Problems

Examining the suitability issue in more detail reveals that while suitability problems were relatively consistent across districts, this problem was highest in smaller NWT communities, in large households of six or more persons and in public housing units. In addition to being able to identify households with too few bedrooms to support the number of residents, the 2004 NWT Community Survey could also identify households with excess bedrooms given the number of normal residents. Not surprisingly, the incidence of extra bedrooms was most common in one person or two or three person households and in owned dwellings. Interestingly, there was relatively little differences in the incidence of extra bedrooms by district, by community type or by household income.

Adequacy problems relate to the condition of the dwelling and occur when a dwelling doesn't have hot and cold running water, an indoor toilet, or an installed bath or shower or when the dwelling requires major repairs such as serious defects in the structural condition of the dwelling or with the plumbing, electrical or heating systems. As noted earlier adequacy problems are the most common housing problem in the Northwest Territories. For the 1,892 dwellings that were reported as having adequacy problems for the 2004 NWT Community Survey, some 91% reported that they were in need of major repairs. Other causes of adequacy problems were much less frequent with no running water identified by 13% of households with adequacy problems, while fewer than 200 households in the NWT reported no bathtub or shower, no sink in the bathroom, no kitchen sink or no indoor toilet.

The need for major repairs to the dwelling was most common in the Nahendeh and Sahtu Districts and in smaller communities throughout the NWT. Some 25% of households in smaller NWT communities identified the need for major repairs compared to 11% of households in the regional centers of Hay River, Inuvik and Fort Smith and 4% of households in Yellowknife. Other households where the need for major repairs was significantly higher than average included households with six or more residents, with owned dwellings and public housing units, and with households with lower total household income.

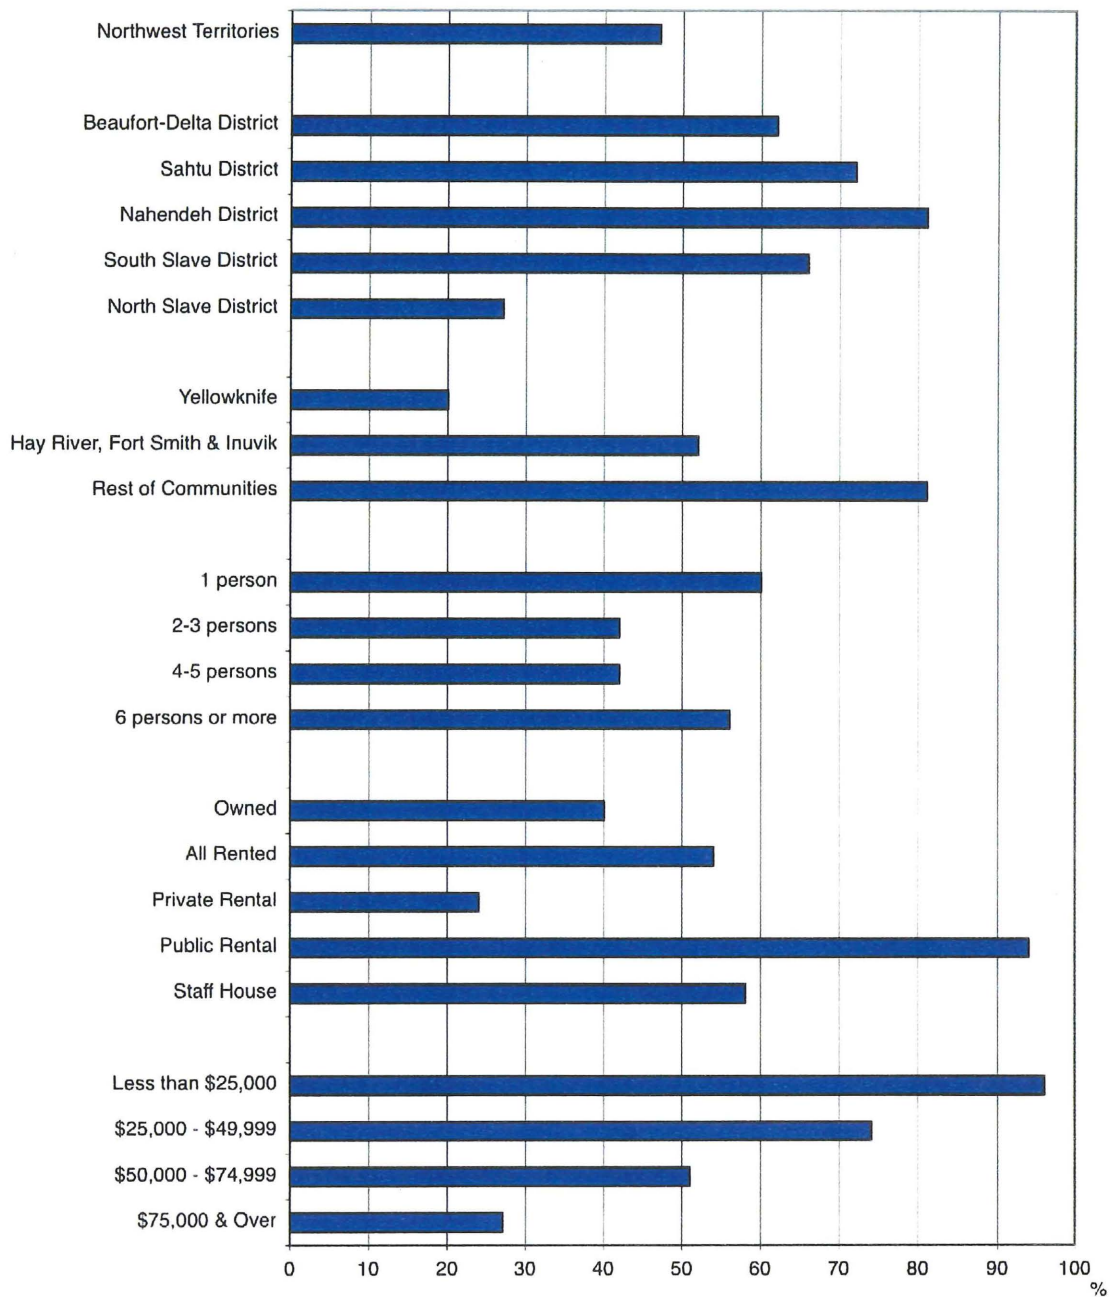

In order to determine affordability of housing in the Northwest Territories, information was collected on housing costs including rent or mortgage payments, costs for heating, electricity, water and other municipal services, property taxes, land lease costs and insurance costs. Based on this information, some 8% of households in the Northwest Territories reported monthly housing costs of less than \$100. An estimated 17% of households reported paying \$100-\$499 for housing, 22% pay \$500-\$999 per month, 28% pay \$1,000-\$1,499 per month, while 25% of territorial households pay \$1,500 or more per month for housing costs.

The amount paid for housing varies significantly by community type. In Yellowknife, some 20% of households paid less than \$1,000 per month for housing, compared with 52% of households in Hay River, Inuvik, and Fort Smith. In smaller NWT communities 81% of households reported paying less than \$1,000 per month for housing.

Some 40% of households that own their dwelling pay less than \$1,000 per month, which compares with 24% for private market rentals, 58% for staff houses and 94% of public housing units. For public housing, an estimated 79% of households pay less than \$500 monthly for housing.

As noted, 40% of home owners pay less than \$1,000 per month. In contrast, 36% of home owners pay more than \$1,500 per month. These relatively high amounts paying either a large amount for housing or a low amount for housing reflects, to a large degree, households with a mortgage compared to households that have paid off their mortgage.

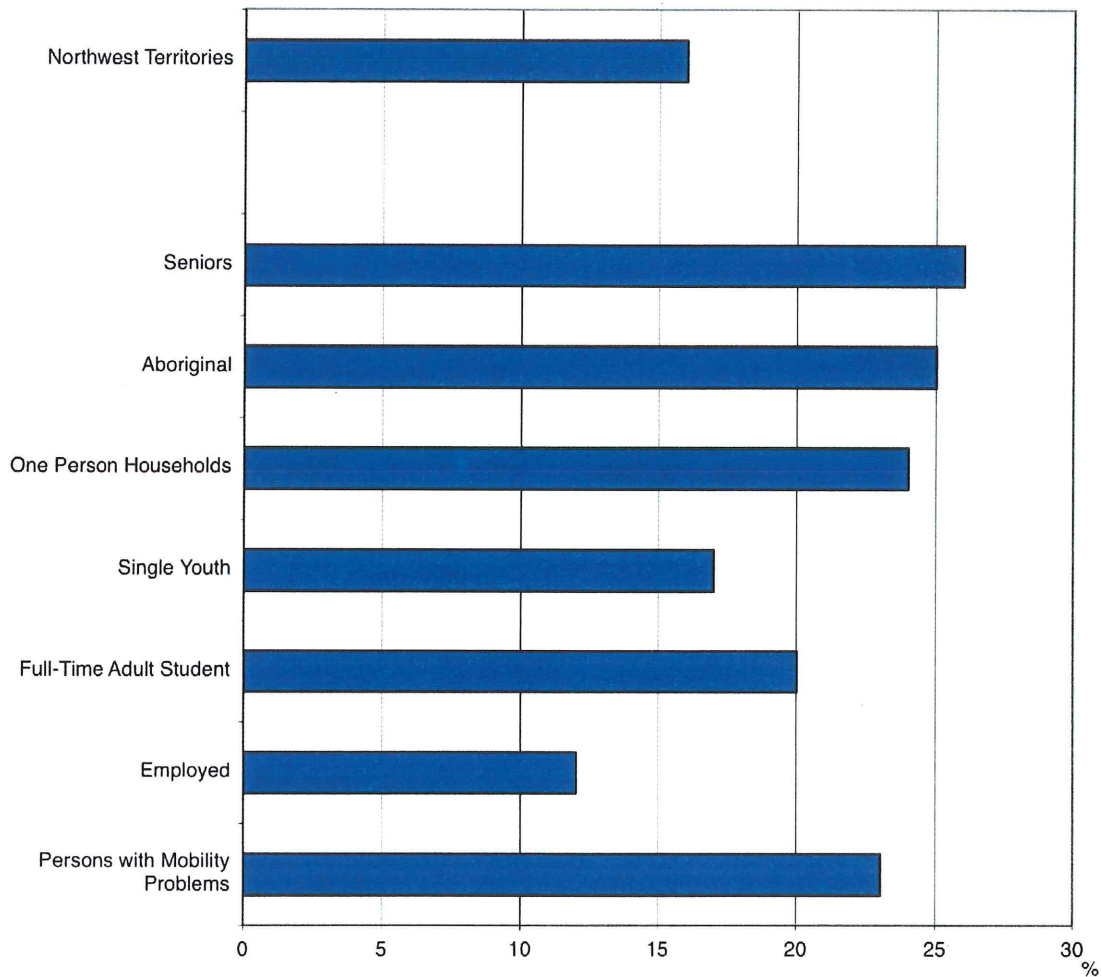

*Figure 2
 Percentage of Households with Less than \$1,000 Overall Housing Costs, by Selected Characteristics
 Northwest Territories, Winter 2004*

Housing Conditions for Selected Groups

A more detailed examination of housing conditions for selected groups is provided in this section. The tables provided for each group compares the housing conditions for the group to the territorial totals by key selected characteristics. This section highlights where differences were greatest and the type of housing problems most common for the group.

*Figure 3
Core Need, by Selected Groups
Northwest Territories, Winter 2004*

Seniors

Households where at least one person 60 years of age or older resides is considered a senior's household. The core need rate for senior's households is 26% for the Northwest Territories, which is higher than the overall rate of 16%. The core need percent is higher among senior's households in all districts and community types than for the total population.

The gap in core need among the total population and senior's households is largest in the Sahtu District and the North Slave District, in Yellowknife, among households with between 2 and 5 residents, and for owned dwellings.

Adequacy problems amongst senior's households showed the greatest difference from the total population. Some 22% of senior's households reported adequacy problems compared to 14% overall. Incidence of affordability and suitability were similar between senior's households and all households.

Aboriginal Persons

Households where at least one aboriginal person resides is considered an aboriginal household. Core need for aboriginal households at 25% was higher than the overall value of 16%. In many cases, the pattern of

core need by characteristics is similar to that found for the total population. In Yellowknife, core need for aboriginal households was 17%, which compares with 9% overall. The largest difference between aboriginal and all households in Yellowknife is with affordability where 17% of aboriginal households in the city reported affordability problems.

Overall in the Northwest Territories, suitability and adequacy problems occur more frequently among aboriginal households, while affordability had similar incidence as the total population.

One Person Households

The overall core need among one person households was 24% compared with 16% overall. This larger value was most apparent in Yellowknife where 25% of one person households are in core need compared with 9% overall. In the regional centers of Hay River, Inuvik and Fort Smith core need among one person households was 17% compared with 11% overall, while in smaller NWT communities core need for one person households and for all households were very similar at 29% and 30%, respectively.

Much higher core need is noted for owned dwellings and private market rentals for one person households. Further, while adequacy is similar among one person households and all households, affordability problems are much more prevalent among one person households, at 19%, compared with all households at 11%. Suitability is, by definition, not a problem for a one person household.

Single Persons 18 to 29 Years of Age

The overall core need among households with at least one single person 18 to 29 years of age was 17%, which is similar to the overall core need value of 16%. Interestingly, while the presence of single youth did not significantly change core housing need, households with these youth had higher rates of housing problems at 38% compared with the overall value of 29%.

Examining housing problems by type shows that households with at least one single youth between 18 and 29 years of age are much more likely to have suitability or crowding issues at 22% of these households compared with 9% of households overall that have suitability problems. These higher rates of suitability problems for households with these older youth was consistent across all districts, community types, household sizes, tenure and income levels. Moreover, households with an older youth resident with suitability problems represent 58% of all households with suitability problems.

Adequacy and affordability problems for households with older youth was similar to patterns found for all households.

Adult Students

The overall core need among households with at least one adult resident that attends school full-time was 20% which compares with an overall rate of 16%. Areas with particularly higher core need rates for households with adult students include the regional centers of Hay River, Fort Smith and Inuvik, two and three person households, and private market rentals.

The most common housing problem among households with at least one full-time student was suitability problems which were present in 26% of these households.

Employed Persons

Households where at least one person is employed is considered to be a household with an employed resident. Core need among households with an employed resident was 12% compared with 16% overall. The lower core need among households with at least one employed resident was consistent across all districts, community types, households sizes and tenures.

Households with at least one employed person had lower incidence of adequacy and affordability problems than for all territorial households.

Households with a Person with Mobility Problems

Households that indicated that there was a resident with mobility problems had a higher percent in core need at 23% compared with 16% overall. This difference was greatest in the Beaufort-Delta District and the Nahendeh District. Higher core need among households with a resident with mobility problems was also noted for the regional centers of Hay River, Inuvik and Fort Smith.

Adequacy problems, in particular, were higher at 23% for households with a person with mobility problems than for all NWT households where 14% reported adequacy problems.

A total of 919 households identified having a resident with a mobility problem at the time of the 2004 NWT Community Survey. Further, 528 households reported that their dwelling had been modified for a person with mobility problems. Overall some 36% of households with residents with mobility problems have been modified, while there are 194 dwellings that have been modified where no one with a mobility problem currently resides.

APPENDIX B

**TECHNICAL DEFINITIONS, METHODOLOGY,
AND 2004 CORE NEED INCOME THRESHOLDS**

TECHNICAL DEFINITIONS

The key measure in describing the number of households that are facing housing pressures in the Northwest Territories is core need. The definition of core need and the related housing problems are nationally set and must be used for targeting of federal funding. Although defined below, core need can generally be described as a household that has a housing problem and has a total household income below the community core need income threshold.

The following are technical definitions of terms that are used to describe housing conditions in the Northwest Territories in this report.

Housing Problem

Housing problems included in this survey are divided into three categories: suitability, adequacy, and affordability.

Suitability

Suitability refers to the problem of overcrowding or whether a household has enough bedrooms appropriate for the number of people. The number of bedrooms required for a household is determined by the *National Occupancy Standards*, which specify:

- a minimum of one and a maximum of two persons per bedroom;
- parents are eligible for a separate bedroom from their children;
- household members aged 18 or more are eligible for a separate bedroom, unless married or cohabiting spouses; and
- dependants aged five or more of the opposite sex do not share a bedroom.

Adequacy

Adequacy refers to the physical condition of a dwelling or whether a household has basic facilities to provide a safe and healthy environment.

A household has an adequacy problem if the dwelling is:

- without hot and cold running water; or
- without an indoor toilet; or
- without installed bath or shower; or
- requiring major repairs as evaluated by the household. Major repairs include more serious defects in the structural condition of the dwelling, as well as in the plumbing, electrical and heating systems.

Affordability

Affordability problems exist when a household pays an excessive amount for shelter. A household has an affordability problem if more than 30% of a household's income is paid to shelter costs (see detailed costs under the CNIT description).

Core Need Income Threshold (CNIT)

The CNIT is the income limit for each community that represents the amount of income a household must have to afford the cost of owning and operating a modest 3 bedroom home or, in market communities, renting a home without government assistance. The cost of owning and operating a home takes into consideration:

- The amount of the mortgage payment based on mortgage value (principle including land costs and interest) and amortized over 25 years.
- Shelter costs which include monthly taxes, monthly power, monthly heating, monthly domestic water and sewer, insurance premiums and anticipated maintenance costs.

Monthly payments based on the above criteria are calculated and the income threshold represents an income that will support these payments without a household spending more than 30% of their gross income to own and operate the home.

The NWT Housing Corporation also uses the CNIT to assist in determining an applicant's eligibility for social housing. Factors that go into calculating the CNIT for each community are: construction costs; land costs; taxes; power; heating; water & sewer; insurance premiums; and maintenance costs.

Core Need

If a household has any one housing problem (suitability, adequacy, or affordability) or a combination of problems, and a total household income below the CNIT, the household is considered to be in core need.

METHODOLOGY

Survey Organization

- The 2004 NWT Community Survey questionnaire and the survey methodology were developed by the Bureau of Statistics in consultation with the NWT Housing Corporation (NWTHC).
- Survey operations, training, and organization of Senior Interviewers and Community Interviewers was completed by Bureau of Statistics staff. An interviewer manual was prepared and provided to all Community Interviewers.
- Senior Interviewers were recruited and trained by Bureau of Statistics on the survey administration. Senior Interviewers, in cooperation with the Local Housing Organizations identified Community Interviewers for the survey.
- All questionnaires were completed during January and February 2004.
- A copy of the questionnaire is provided in Appendix C.

Sampling Procedures

- The requirement for statistically reliable estimates of housing need at the community level dictated sampling procedures used for the 2004 NWT Community Survey.
- The total sample for the 2004 NWT Community Survey was 4,253 households. In most communities with sampling, the area frame developed and maintained by the Bureau of Statistics was used for sample selection. In Yellowknife, Hay River, Fort Smith and Inuvik random digit dialing techniques were used.
- In the remaining NWT communities, an attempt was made to survey all dwellings to ensure sample sizes sufficiently large for the release of community level statistics. In advance of survey operations, Senior Interviewers in cooperation with the local housing organization updated listings of dwellings in the community to ensure complete community coverage.
- A survey questionnaire was completed for each sampled dwelling and included information for all persons who normally resided in the dwelling. Where an individual was not present, responses were accepted from other household members.
- Table B1 provides the sample sizes for each community.

Data Entry and Processing

- As Senior Interviewers returned completed questionnaires to the Bureau of Statistics, each questionnaire was reviewed and obvious corrections and edits were made. In some cases, respondents were re-contacted for clarification of survey responses.
- Data entry was completed directly from questionnaires on a database developed by the Bureau of Statistics, while statistical tables were prepared using the Statistical Package for the Social Sciences (SPSS).

Edit, Imputation and Sample Weighting

- Following data entry, computer-assisted edits were performed to check for data entry errors and logical inconsistencies among responses.
- Where critical information for defining core need was missing, an attempt was made to impute values based on other answers for the questionnaire. Where this was not possible, the imputation procedures were used.
- Weighting of the statistical file was undertaken so that housing statistics were based on estimated counts of households at the community level.
- Due to the use of weighting procedures, totals for tables in this report do not necessarily sum.

Sampling and Non-Sampling Errors

- Information on the sample sizes and sampling errors is summarized in Table B1. Community, district and territorial level standard errors and coefficients of variation are provided for the estimates of core housing need. This information should be considered when statistics from this report are being used.
- The standard error statistic is used to determine confidence intervals for estimates of population values based on a sample. Most often, the 95 percent confidence interval, which should contain the true population value 19 times out of 20, is used. To determine the 95 percent confidence interval for an estimate, the standard error is multiplied by 1.96.
- For example the estimate of core housing need in Deline is 75 households. From Table B1, the standard error for the estimate of core need is 3 households. This means that the user can be 95% confident that the number of households in core need in Deline is in the interval 75 ± 6 households, that is between 69 and 81 households. Such interval estimates are highly conservative and most often population values are quite close to their corresponding sample estimates.
- The other measure of sampling error, also provided in Table B1, is the coefficient of variation (CV). This statistic is the ratio of the standard error to the sample estimate, indicating the percentage error implicit in the estimate. In the case of core need in Deline, the coefficient of variation is 4.1%.
- Another source of error in surveys is referred to as non-sampling errors. These errors result from incorrect answers being given to questions, data entry errors, etc. Surveys are designed to help minimize such errors. Generally, the effect of such errors is not known.

CORE NEED INCOME THRESHOLD (CNIT)

The Core Need Income Threshold (CNIT) is an income limit for each community that represents the amount of income a household must have to be able to afford the cost of owning and operating a home without government assistance. CNITs are determined in different ways for market and non-market communities in the NWT. There are three market communities in the NWT: Hay River, Inuvik and Yellowknife. The CNITs for these communities are based on people not having to pay more than 30% of their gross household income to rent suitable and adequate shelter – as determined through Northwest Territories Housing Corporation (NWTHC) price surveys. In non-market communities, the cost of owning and operating a home without government assistance is used.

The NWTHC also uses the CNIT to assist in determining an applicant's eligibility for social housing. The methodology and factors that go into calculating the CNIT for each community are outlined below:

New Unit Maximum Construction Costs (MCC):

New unit Maximum Construction Costs (MCCs) were developed by averaging the home ownership capital advanced to block funded communities, less any amounts advanced for administration or expenses not directly related to home ownership projects. New unit costs for non-block funded communities were based on actual tender prices divided by unit square foot sizes to determine average square foot prices for 2, 3 and 4 bedroom home ownership units. Unit prices for Yellowknife were determined from the cost to purchase an existing modest 3-bedroom unit in Yellowknife.

Land Costs:

Derived from the Department of Municipal & Community Affairs' current Equity Lease Agreement for sale prices for lots in NWT communities.

Mortgage Value:

Total construction cost plus land cost.

Mortgage Payment:

Mortgage value (total construction cost plus land cost) amortized over 25 years at the current National Housing Act rate of 5.875%, blended payment of principal and interest.

Monthly Taxes:

For *General Taxation Area* communities, taxes were determined by applying the 1998 Mill Rate given by the Department of Municipal & Community Affairs to the new unit cost with land. For the communities of Fort Simpson, Fort Smith, Hay River, Inuvik and Yellowknife the 1998 Mill Rate was applied, plus a 3% increment to accommodate existing and proposed property tax increases for 1999 and 2000.

Monthly Power:

The rates provided by the NWT Power Corporation are based on 700 kW hours (average consumption), multiplied by the domestic rate under the Territorial Power Subsidy Program. The Territorial Power Subsidy Program is applied when consumption is 700 kW hours or less.

Monthly Heating:

Average consumption of 4,000 litres of heating fuel per year remains unchanged from the April 2001 Core Need income Threshold consumption level. Monthly cost increased by 4% to accommodate fuel price increase.

Monthly Domestic Water & Sewer:

Monthly water and sewer services are based on average actual water consumption for NWT HC public housing units and multiplied by the domestic rate for water services.

Insurance Premiums:

Average price quoted by private insurance agents for a 3 bedroom unit in Fort Simpson, Fort Smith, Hay River, Inuvik and Yellowknife. In the remaining communities in the NWT, average prices quoted by private insurance agents for a 3 bedroom home ownership unit.

Monthly Maintenance:

This is derived from a NWT HC Maintenance Services estimate.

Shelter Costs:

Includes total monthly power, heating, water & sewer, insurance and maintenance costs.

Threshold Per Year:

The CNIT is the income limit for each community that represents the amount of income a household must have to afford the cost of owning and operating a modest 3 bedroom home or, in market communities, renting a home without government assistance. The cost of owning and operating a home takes into consideration:

- The amount of the mortgage payment based on mortgage value (principle including land costs and interest) and amortized over 25 years.
- Shelter costs which include monthly taxes, monthly power, monthly heating, monthly domestic water and sewer, insurance premiums and anticipated maintenance costs.

Monthly payments based on the above criteria are calculated and the income threshold represents an income that will support these payments without a household spending more than 30% of their gross income to own and operate the home.

Core Need Income Thresholds:

Thresholds are rounded to the highest \$500.

Previous Core Need Income Thresholds:

The previous Core Need Income Thresholds were calculated in April 2001.

APPENDIX C
QUESTIONNAIRE

2004 NWT Community Survey

Survey Information

ID Number: _____ Community: _____

Date: _____ Interviewer: _____

Introduction

Hello, my name is (...). The NWT Bureau of Statistics is conducting a community survey of randomly selected households in the Northwest Territories. This survey will be used to identify the housing needs of the people living in your community, as well how many people are employed and how many people are looking for work.

The survey will take approximately 30 minutes and the information that you provide about your household will be kept strictly confidential and used only for statistical purposes. All information collected is protected by the privacy provisions of the Access to Information and Privacy Act.

For Phone Survey Only

The first thing I need to do is to confirm the telephone number where I have reached you. Is this number ...

_____ - _____ (from batch sheet)

For Yellowknife:

Is this dwelling located in either N'dilo or Detah?

1 Yes

2 No

→ If Yes, end interview and thank respondent for their time. Explain that households in these communities will be interviewed in person.

For Hay River:

Is this dwelling located on the Hay River Reserve?

1 Yes

2 No

→ If Yes, end interview and thank respondent for their time. Explain that households in the Hay River Reserve will be interviewed in person.

A. Household Type

I would like to start with just a few general questions about your household.

DK R

1. Which of the following categories best describes the type of dwelling that this household lives in?

(Ask if interview by telephone, otherwise interviewer should complete)

- | | |
|---|---|
| 1 <input type="checkbox"/> Single Detached House | 2 <input type="checkbox"/> Semi-Detached or Double (Side-by-Side) |
| 3 <input type="checkbox"/> Town House or Row House | 4 <input type="checkbox"/> Duplex (Top and Bottom) |
| 5 <input type="checkbox"/> Movable Dwelling, Mobile Home or Trailer | 6 <input type="checkbox"/> Apartment |
| 7 <input type="checkbox"/> Other (Specify) _____ | |

DK R

2. How many people, in total, normally live in this household? _____

DK R

3. How many of these people are under the age of 15 years? _____

DK R

4. How many of these people are 15 years of age or older? _____

DK R

5. Is there anyone living in this household who has limitations or a permanent disability that impact their mobility?

- 1 Yes 2 No

DK R

6. Has this dwelling been modified in any way for a person with mobility problems? This may include grab bars, kitchen or bathroom modifications, lowered light switches or outdoor wheelchair access.

- 1 Yes 2 No

DK R

7. How many bedrooms does this dwelling have? _____

DK R

8. Does this dwelling have interior hot and cold running water?

- 1 Yes 2 No

9. Does this dwelling have ...

DK R a) A bath tub or shower? 1 Yes 2 No

DK R b) A basin or sink in bathroom? 1 Yes 2 No

DK R c) A kitchen sink? 1 Yes 2 No

DK R

10. What type of toilet facilities does this dwelling have? (Mark ONE only)

- 1 Flush toilet (including flushomatic)
- 2 Other indoor toilet (including electric/propane toilet/composting toilet)
- 3 No indoor toilet (includes honey-bucket)

DK R

11. Which of the following statements best describes the current condition of this dwelling? (Mark ONE only)

- 1 This dwelling requires regular maintenance such as painting, servicing the furnace, etc.
- 2 This dwelling requires only minor repairs such as fixing the shingles, repairing windows, etc.
- 3 This dwelling requires major repairs such as structural repairs to the roof, walls, floors or foundation, replacing defective wiring, heating, or plumbing systems, etc.

C. Household Harvesting Consumption Questions

I would now like to ask you some questions about your household.

DK R 1. During 2003, did this household eat meat or fish obtained through hunting or fishing?

- 1 Yes
- 2 No → Go to Section D

DK R 2. During 2003, how much of the total amount of meat or fish eaten in this household was obtained through hunting or fishing?

- 1 All (more than 90%)
- 2 Most (about 75%)
- 3 Half (about 50%)
- 4 Some (about 25%)
- 5 Very little (less than 10%)

D. Shelter Costs

DK R 1. What are the heating sources used for this dwelling?

- 1 Oil
- 2 Propane
- 3 Natural Gas
- 4 Wood
- 5 Other (Specify) _____

→ If Only One Source, Go to Question 2

DK R a) Which is the main heating source?

- 1 Oil
- 2 Propane
- 3 Natural Gas
- 4 Wood
- 5 Other (Specify) _____

2. For this dwelling, ON AVERAGE what are the monthly payments for ...

	Amount	None	Incl. in rent or other payments
<input type="checkbox"/> DK <input type="checkbox"/> R a) electricity?	[\$ _____]	1 <input type="checkbox"/>	2 <input type="checkbox"/>
<input type="checkbox"/> DK <input type="checkbox"/> R b) water and other municipal services? e.g. sewer & garbage. (Do not include property taxes)	[\$ _____]	1 <input type="checkbox"/>	2 <input type="checkbox"/>
<input type="checkbox"/> DK <input type="checkbox"/> R c) oil, gas, wood, propane, or other heating fuels?	[\$ _____]	1 <input type="checkbox"/>	2 <input type="checkbox"/>

 [\$ _____] Annual Amount for Heating Fuel if Monthly Amount is Unknown

DK R 3. What is the annual amount paid for insurance premiums for this dwelling?

[\$ _____] per year 1 None

DK R 4. Do you own or rent this dwelling?

- 1 Own → If Own, Go to Question 7
- 2 Rent → If Rent, Go to Question 5

DK R 5. Is this dwelling ...?

- 1 a private market rental unit
- 2 a public housing unit
- 3 a staff house

DK R 6. What is the total monthly rent (excluding parking) paid for this dwelling?

[\$ _____] per month 1 None

→ Renters Go to Question 11

DK R 7. What is the total regular mortgage payments for this dwelling?

[\$ _____] 1 No Mortgage → If No Mortgage, Go to Question 8

DK R a) Is that ...

- 1 weekly
- 2 bi-weekly
- 3 monthly

DK R b) Does that include property taxes?

- 1 Yes
- 2 No

DK R 8. What is the estimated yearly property taxes (municipal and school) for this dwelling?

[\$ _____] per year 1 None

DK R 9. Are there any annual lease costs for the land related to this property?

- 1 Yes
- 2 No → Go to Question 10

DK R a) What are the annual lease costs?

[\$ _____] per year

DK R 10. In the past 15 years, have you received any direct assistance from the NWT Housing Corporation in obtaining or repairing your home?

- 1 Yes
- 2 No → Go to Question 11

a) Was the assistance for ...

— If yes, When was this assistance received —
Less than 5 years ago 5 to 9 years ago 10 to 15 years ago

- | | | | | | |
|---|--------------------------------|-------------------------------|----------------------------|----------------------------|----------------------------|
| <input type="checkbox"/> DK <input type="checkbox"/> R i) repair or renovation of the home? | 1 <input type="checkbox"/> Yes | 2 <input type="checkbox"/> No | 1 <input type="checkbox"/> | 2 <input type="checkbox"/> | 3 <input type="checkbox"/> |
| <input type="checkbox"/> DK <input type="checkbox"/> R ii) home ownership assistance? | 1 <input type="checkbox"/> Yes | 2 <input type="checkbox"/> No | 1 <input type="checkbox"/> | 2 <input type="checkbox"/> | 3 <input type="checkbox"/> |
| <input type="checkbox"/> DK <input type="checkbox"/> R iii) loan guarantees? | 1 <input type="checkbox"/> Yes | 2 <input type="checkbox"/> No | 1 <input type="checkbox"/> | 2 <input type="checkbox"/> | 3 <input type="checkbox"/> |

DK R 11. Now I need to ask generally about your estimated total household annual income from all sources before deductions. Be sure to include everyone 15 years of age and older who normally reside in this household. Is your household income ...

- | | | |
|--|---|---|
| 1 <input type="checkbox"/> Less than \$15,000 | 2 <input type="checkbox"/> \$15,000 to \$29,999 | 3 <input type="checkbox"/> \$30,000 to \$44,999 |
| 4 <input type="checkbox"/> \$45,000 to \$59,999 | 5 <input type="checkbox"/> \$60,000 to \$74,999 | 6 <input type="checkbox"/> \$75,000 to \$89,999 |
| 7 <input type="checkbox"/> \$90,000 to \$124,999 | 8 <input type="checkbox"/> \$125,000 or More | |

E. Follow-Up Information (Ask only if Face-to-Face interview)

1. Does this household have a telephone?

- 1 Yes
- 2 No → End Interview and Thank Respondent for their Time

2. In case we need to contact you to clarify some questions could you please provide us with your telephone number?

Telephone Number: (867) _____ - _____

**** End Interview and Thank Respondent for their Time ****
