

**Power Generated at Jackfish and Bluefish Plants**

The following information has been gathered to provide details of the amount of power being generated at the Jackfish Plant and Bluefish Hydro Plant, respectively, with highlights for significant increases or decreases in each plant over the last three years.

Generation in GWH on a fiscal year basis ending March 31:

	2001/02	2002/03	2003/04	2004/05*	2005/06**
Bluefish hydro	53.5	51.2	48	13	39.5
Diesel gen	13.7	31.5	40.5	17.7	12
Snare hydro	189.2	175.7	163.1	74.3	165.9
Total	256.2	258.4	251.6	105	217.4

\*Generation to date for the period April 1-September 30, 2004.

\*\*Forecast for 2005/06 based on average water.

Note -The Bluefish hydro facility was owned and operated by Miramar Con Mine Ltd until April 2003.

2003/04 and 2004/05 have been low water years with less than average water availability. Snare hydro production in 2003/04 was maintained at 95% of average by drawing down the reservoir. Snare hydro production in 2004/05 is forecast to be 90% of average. During years of lower than average hydro production diesel production is increased during the summer months to store water.
