Figures include federal resource revenues from all three territories over the past 20 years. The federal government does not publish separate numbers for each territory but most of the royalties after 2002-03 would be from the NWT because Yukon negotiated a devolution agreement in 1998 and the lead zinc mines in Nunavut (Polaris and Nanisivik) have been closed since 2002. Although the Lupin mine reopened briefly, it probably did not generate significant revenues.

All amounts shown are in current dollars (no adjustment for inflation).
